## ***Deliverable***

### ***D3.4 - Technical, Financial and Ethical review results***

---

**Author(s):** K. Papadopoulou, E. Papadopoulou, M. Kostoula (SYN)

**Status -Version:** V0.2

**Delivery Date (DOW):** 30 June 2016

**Actual Delivery Date:** 06 May 2016

**Distribution - Confidentiality:** Public

**Code:** FIADOPT-D3\_4 FF\_20160710.docx

#### **Abstract:**

This document presents the procedure and results of the technical, financial and ethical review (i.e. after each project batch review). The deliverable is an add-on to the D3.2/D3.3 deliverable providing the final review of the sub-grant projects. Moreover, it provides statistics on the GE and DSEs that were initially planned to be used and the ones that have been actually used by the projects.

# 1. Introduction

FI-ADOPT (Future Internet Core Platform Adoption and Sustainability Enabler) is one of the A16 accelerator projects that promotes the use and adoption of the EU FP7 Future Internet-Public Private Partnership<sup>1</sup> (FI-PPP) Core Platform, the FIWARE technologies and assets.

The FI-ADOPT project provides financial, technological and business/market uptake support to European SMEs and web entrepreneurs to develop highly innovative applications based on the FI-PPP Core Platform. FI-ADOPT accelerates FIWARE technology in Europe through a set of concrete steps:

- **Launching and executing three open calls** for selecting innovative projects in the application areas of:
  - **corporate and citizen's learning** (on different subjects and levels) and training (including technical training and crisis management, serious games)
  - **improving health and well-being** (through healthy behaviour shaping and promotion)
  - **social and cultural integration** focusing on immigrants and other minorities.

The scale of adoption of the FI-PPP results, including FIWARE usability, Generic Enablers (GEs), Domain Specific Enablers (DSEs) and testing infrastructures, will be included as evaluation criteria. Besides FIWARE technology, applications are expected to employ rich media, social networking, and/or mobile apps, gaming principles, gamification, context-awareness, location-awareness, data mining etc.

- **Organizing training events** (offline and online) regarding the results of the FI-PPP, creating the framework for exchanging experience, and suggesting solutions. Besides the FI-ADOPT web site and social media, FI-ADOPT supports a specific platform (<http://www.f6s.com/fiware-fiadopt>) to enable **knowledge transfer** between FI-PPP partners/projects and web entrepreneurs and among web entrepreneurs to ensure permeation of Future Internet technologies and establishment of sustainable technical support among them.
- **Assisting the selected projects in improving their business** prospects, value proposition and funding access opportunities by organising access to acceleration programs, Go-to-market webinars, **Investor Readiness webinars, and Investment Readiness Programmes (IRP)**; and by supporting and inviting them to participate to relevant Venture Capitals Events.
- **Setting up the "FI-ADOPT innovation family"**, which will include international and national/ regional policy making bodies, user groups, innovation accelerators, investors, small and big ICT players and FI-PPP stakeholders, who will shape the Future Internet application landscape and align their contribution to their common benefits.

Supported by the European Union, the FI-ADOPT project provides to SMEs and web entrepreneurs access to a total grant of 4.240.000 EUROS. The overall financial contribution for each selected project is between 50.000 and 150.000 EUROS. Available funding has been allocated to projects via 3 open calls. In the 1<sup>st</sup> Open Call 13 projects have been selected and 1.699.578€ have been allocated; in the 2<sup>nd</sup> Open Call 12 projects have been selected and 1.602.400€ have been allocated; and in the 3<sup>rd</sup> Open Call 7 projects have been selected and a total of 938.022€ have been allocated.

This deliverable presents the procedure that has been followed for the Technical evaluation of the projects and the results. In more details in chapter 2 it presents the technical evaluation procedure and methodology and in chapter 3 the statistics of the projects, the GEs and DSEs that are mostly used and the reaction of the projects.

---

<sup>1</sup> <http://www.fi-ppp.eu/>

## 2. FI-ADOPT Reviews procedure

FI-ADOPT run 3 open calls and via a group of external evaluators has selected to support in total 32 sub-projects: 13 from the 1<sup>st</sup> call, 12 from the 2<sup>nd</sup> call and 7 from the 3<sup>rd</sup> Call. To these projects, we have followed a continuous technical, financial and ethical supervision, highlighted by the project reviews.

### 2.1.Sub-Projects Execution Time

The purpose of the technical reviews is to evaluate the progress of the project development and the adoption of the FIWARE technology (GEs and DSEs utilization).

#### 2.1.1. Supervisor Assignment

For each FI-ADOPT sub-projects a supervisor company and a specific person has been assigned. The duties of the supervisor are to follow on a day by day basis the progress of the project and report any issue or underperforming project. Moreover, the projects have a dedicated person to directly contact if there is a (technical or administrative issue) and s/he would give advice or direct the project to the correct contact point in order to get support.

The assignment of the projects to FI-ADOPT partners has been based on interest on the topic or the project, locality and effort in the relevant WP of the FI-ADOPT project. The assignments are shown in Table 1.

Table 1: FI-ADOPT supervisors' assignment

### 2.1.2. FI-ADOPT innovation family

In order to support the FI-ADOPT community and built an innovation family we have created:

- Email lists.** We have created three email lists (namely [fiadopt\\_call1@synelixis.com](mailto:fiadopt_call1@synelixis.com), [fiadopt\\_call2@synelixis.com](mailto:fiadopt_call2@synelixis.com), [fiadopt\\_call3@synelixis.com](mailto:fiadopt_call3@synelixis.com)), where the FI-ADOPT consortium and/or the FI-ADOPT projects' participants from each call may exchange information on events or technical issues or problems that may have, potential solution and exchange ideas.
- Dedicated section at the 360.eai** to promote the projects and increase the links between the projects. Each participant may announce news or events and could select to contact or to follow specific projects and make liaison activities (Figure 1).

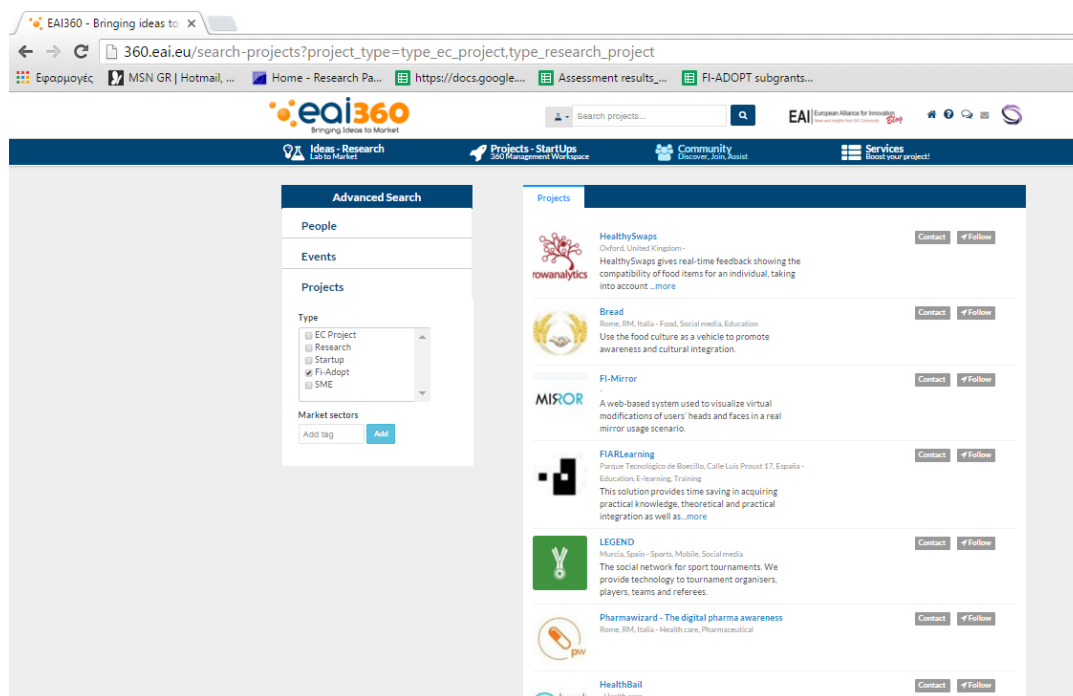

Figure 1: FI-ADOPT sub-projects dedicated section at 360.eai

### 2.1.3. Reports Repository

Beyond the technical development, each project has defined a number of deliverables (reports) that need to be delivered. As FI-ADOPT is “deliverables based”, reporting has been quite important. In order to have a

formal repository, some development has taken place in the 360.eai platform to create an administrative panel support a repository option (Figure 2). The relevant site categorizes the deliverables per project, providers' permissions and gives the reviewers the option to download, accept or reject deliverables.

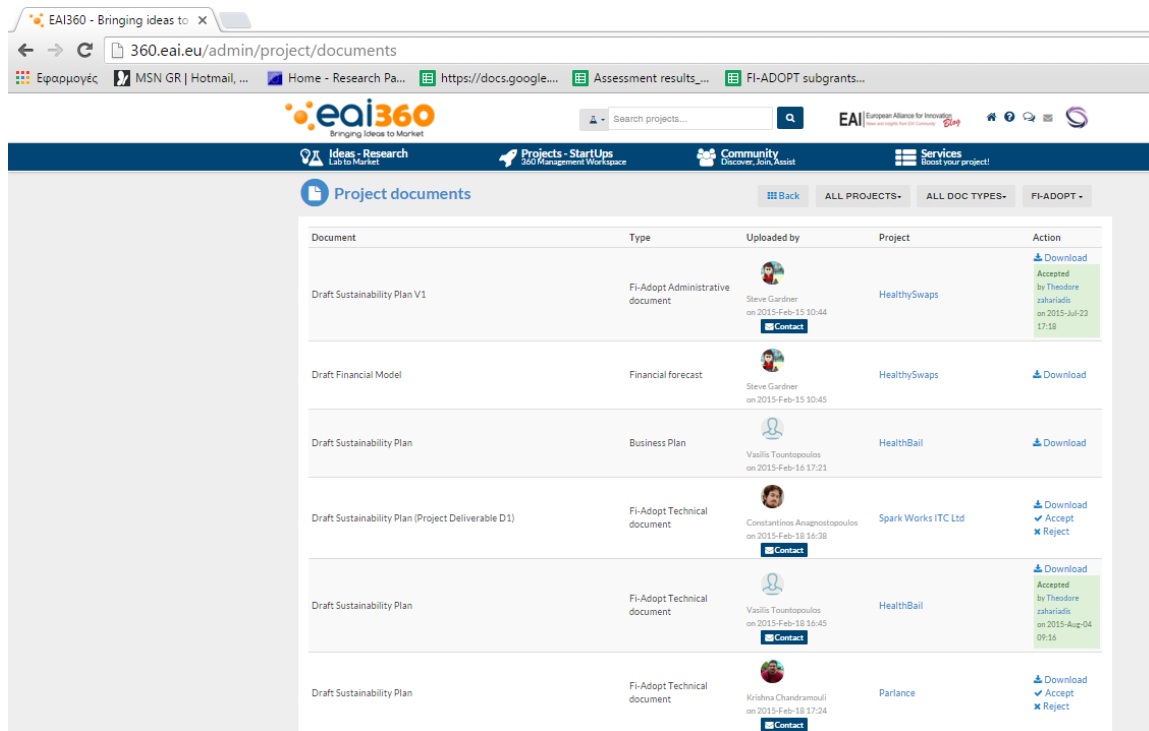

Figure 2: 360.eai repository

## 2.2.Sub-Projects Review

For the sub-projects' technical, financial and ethical reviews, FI-ADOPT has decided to have reviews executed by external experts. The progress and timing that has been followed for the sub-projects reviews & funding is shown in Figure 3. The next section describes in more details the process and the actual execution of the reviews. The planning per project duration is also shown in **Σφάλμα! Το αρχείο προέλευσης της αναφοράς δεν βρέθηκε..**

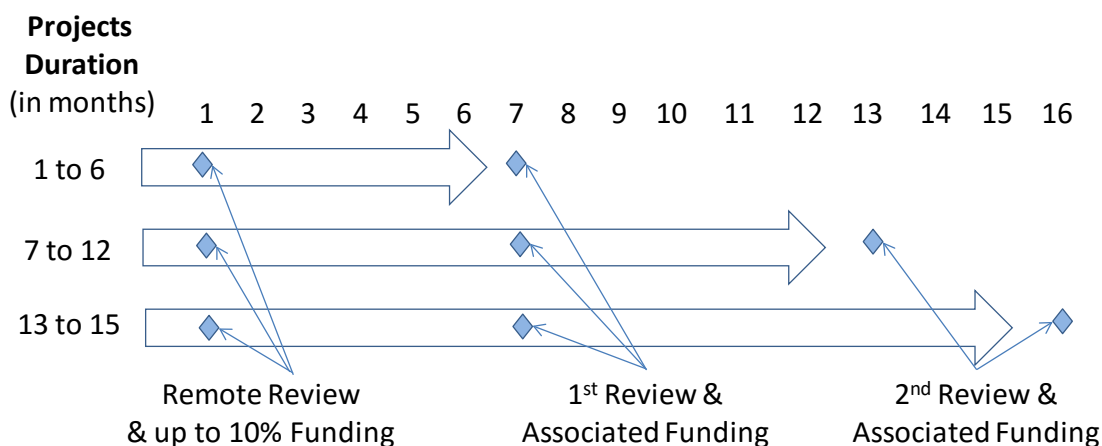

Figure 3: Projects Review & Funding procedure

Projects successfully passing the review receive the relevant funding indicated in Table 7.

### 2.2.1. Draft Sustainability Plan (DSP) Review

Draft Sustainability Plan (DSP) review for all FI-ADOPT sub-projects has been completed in the 1<sup>st</sup> FI-ADOPT reporting period and has been reported in D3.2/D3.4. In the first round 3 DSPs from Call 1 were rejected and had to be resubmitted. Finally, all DSPs have been accepted.

### 2.2.2. Intermediate Review

Intermediate review for all FI-ADOPT sub-projects has been reported in D3.2/D3.4. During the call 1 intermediate review, one project (Ref. 110/ BREAD) was not ready to make a demonstration. As such an additional review was assigned during the call 2 projects. Yet, finally all deliverables from call 1 projects have been accepted. From call 2 projects, one project (Ref. 206/PHARMAWIZARD) was not ready to make a demonstration and an additional review was assigned during the call 3 projects, while some deliverables from 2 additional projects (Ref. 203/ MigraineNet and Ref. 205/TOPEST) were not accepted and an additional review has been arranged for January 2016. From call 3 projects all deliverables have been accepted.

### 2.2.3. Final Review

The initial plan was to perform on-site review of all projects during the Benelux Venture Forum (BVF) on 11-12/5/2016. However this would complicate sub-grants cash flow. As such it was decided to perform remote review for the projects in bunches as they were completing their contractual obligations, in order to be able to release additional funding to them. Before entering the final review each project had to upload all deliverables at the 360.eai repository.

For the final reviews the following experts had been selected:

	Date	Expert 1	Expert 2	Number of projects
<b>Bunch 1</b>	26/01/2016	Dr. N. Nikolaou (DE)	Dr. J. Calic (UK)	5
<b>Bunch 2</b>	08/03/2016	Dr. N. Nikolaou (DE)	Dr. J. Calic (UK)	6
<b>Bunch 3</b>	20/04/2016	Dr. I. Pavlova (BL)	Dr. T. Piatrik (SL)	10
<b>Bunch 4</b>	26/04/2016	Dr. P. Daras (GR)	Dr. S. Tombros (BE)	11

**Table 2: Final review experts**

The review took place remotely via skype and the duration was 40 minutes per project. During the review, each project had to strictly follow the agenda:

#### 1) Presentation (10 minutes)

The sub-projects initially had to make a presentation of 10 minutes, which had to cover three sections:

- Technical Excellence:** Present the service/application idea, approach and technical excellence
- FIWARE Adoption:** Justify the GEs/DSEs utilization and the level of integration
- Sustainability & Business Plans:** Justify the SME/service sustainability and business plans.

Emphasis was primarily put on the SME/service sustainability and on the GEs/DSEs utilization. The presentation was provided via screen sharing and the experts had the time to ask short questions during the presentation.

#### 2) Demonstration (20 minutes)

Demonstrate the applications final version. The application was presented using screen sharing and/or real access in case that was feasible. During the demonstration, utilization of FIWARE technology and user acceptance was demonstrated. In most cases the Span-2 and the Budapest -2 FI-Labs nodes were utilized.

### 3) Q&A (max. 10 minutes)

An additional 10 minutes with questions and answers took place, covering additional issues and potential Ethical related questions.

The criteria that were applied for reviewing the projects are similar to the ones during evaluation and intermediate review. However, emphasis was given to the Market readiness and sustainability plans. Furthermore, a demonstration of the final application was a mandatory part of the review process. In more details, the following criteria were applied:

- **Criterion 1: Technical Excellence.** In this criterion, the experts had to evaluate the technical excellence of the proposal based on the questions such as:
  - Is the application/Idea still Innovative?
  - Have they validated that the objectives have been met?
  - Are the deliverables of good or acceptable quality?
  - Which are the plans for further development?
- **Criterion 2: FIWARE Adoption Acceleration** In this criterion, the experts had to evaluate the knowledge and commitment to the FIWARE technology based on questions such as:
  - Does the application show good knowledge of the FIWARE technology?
  - Is it explained how and why the applicants are utilising the FIWARE GE/DSE Technology?
  - Has FIWARE GE/DSE technology validated?
  - Are there backup plans if some GEs/DSEs support are not supported in the future?
- **Criterion 3: Sustainability & Market Readiness** In this criterion, the experts had to evaluate the capacity of the SME/team and the sustainability plans based on questions such as:
  - Do the applicants know the competition and the market that they target?
  - Is there a sustainability or draft business plan?
  - Is the profile of the SME and/or the Team CVs capable to do the proposed job?
  - Are the costs sufficiently justified?

The schedules for the 4 Bunches of final reviews have been:

Ref	Acronym	Name/Leading Individual	Contact Person	Time (CET)

**Table 6: Bunch 4 projects Final review (26/04/2016)**

During the final review projects, we did not face any FI-Lab instabilities. From all 32 projects, minor changes in the application was requested from 6 projects and only one project (Ref. 205) faced significant issues with application demonstration (Figure 4). Yet, as this is among the projects with the greatest potential, it was decided to give it an additional review on 5 May.

**Figure 4: Final Review Deliverables Acceptance Statistics**

## 2.3. Review of project Financial

FI-ADOPT funding schema is based on the project's deliverables. Each deliverable is associated with a cost. Accepted deliverables (and any other costs associated with a deliverable) are invoiced and reimbursed. The initial plan for projects' reimbursement is shown in Table 7, following specific the funding ceiling.

Project Duration (In Months)	DSP Deliverable	1 <sup>st</sup> review	Final Review
1-6	Up to 10%	Up to 100%	
7-12	Up to 10%	Up to 50%	Up to 100%
13-15	Up to 10%	Up to 35%	

**Table 7: Funding ceiling versus project duration**

However, as no project has duration smaller than 7 months and only part of the FI-ADOPT funding is available at the FI-ADOPT treasurer (INTRASOFT BE), an additional ceiling had to be applied as shown in Table 8 until the FI-ADOPT project is financially cleared by EC.

Project Duration (In Months)	DSP Deliverable	1 <sup>st</sup> review	Final Review	FI-ADOPT Clearance by EC
7-12	Up to 10%	Up to 50%	Up to 83%	Up to 100%
13-15	Up to 10%	Up to 35%		

**Table 8: Updated funding ceiling due to FI-ADOPT funding**

After the final review and given that all deliverables have been accepted, the projects have to send a financial statement to FI-ADOPT coordinator to request for payment of the deliverables. As this is the final review, the payment is made up to the funding ceiling of 83%. The relevant form is shown in the Annex.

## 2.4. Ethical Considerations

In order to review the Ethical dimension of the projects, we have started by grouping the projects based in the FI-ADOPT application areas. The projects selected by FI-ADOPT three open calls are shown in Figure 5 and their grouping per FI-ADOPT application area is shown in Figure 6.

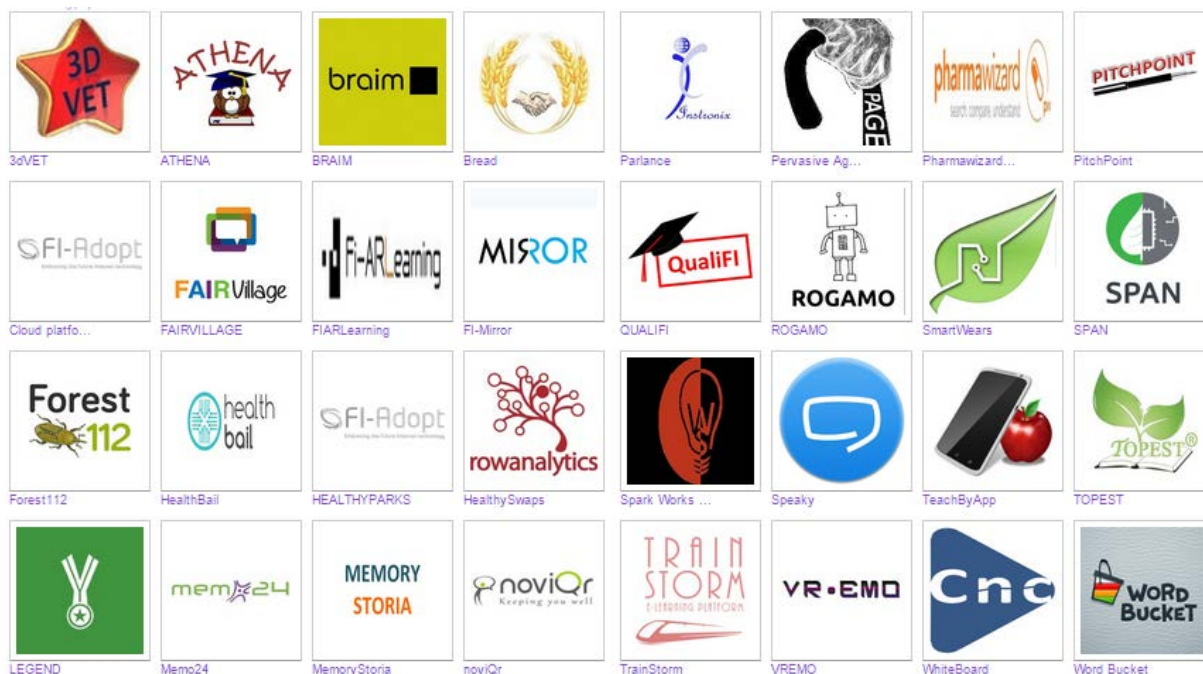

Figure 5: Projects selected by FI-ADOPT open calls

The projects selected from call 1 are shown in orange, the projects from call 2 are shown in blue and the projects from call 3 in black. As we may see there are 5 projects addressing the training application area, 2 projects addressing the social application area, 8 projects addressing the wellbeing application area, 2 projects addressing the Wellbeing –Social subcategory, 8 addressing the Training-Social subcategory and 7 addressing all three categories.

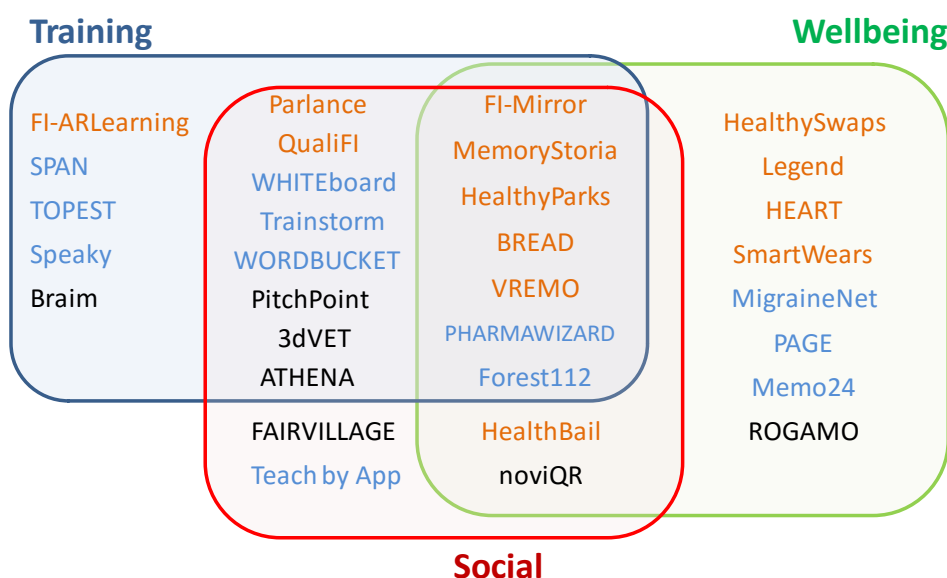

Figure 6: Projects grouping per FI-ADOPT application area

In order to avoid any Ethical issues, we have asked all projects to submit at the proposal and during contract time a form indicating if there are any Ethical issues associated with the projects. All projects have declared that there are no Ethical issues related to:

- Research on Human embryo/foetus
- Research on Animals
- Research Involving Developing Countries
- Dual Use, ICT Implants

As a next step, the FI-ADOPT consortium has put emphasis on the projects that are directly or indirectly addressing the social and/or the wellbeing application areas, as in many cases these are related with Ethical Issues such as Informed Consent and privacy.

With respect to ***informed consent*** there is no project that involves children, human genetic material or human biological samples. However, there are some projects that directly or indirectly address human data collection, collection of health personal data and involve tracking the location of people. The projects that have directly involved mature volunteer patients and performed experiments are:

- HealthySwaps
- HEART
- MigraineNet
- ROGAMO

In all these cases, FI-ADOPT has been closely monitored the relevant projects to avoid any EU law violation. As far as we know, despite the EU Data Protection Directive 95/46/EC<sup>2</sup>, there is no coherent framework for data protection valid across the EU. Instead, data protection policies remain country specific<sup>3</sup>, utterly depending on 28 different national responsible legal authorities. The updated General Data Protection Regulation (GDPR) expected to be put into practice in 2018<sup>4</sup> will strictly document the need for more fine-grained private data handling. On 8 April 2016 the Council adopted the Regulation and the proposal for a Directive of the European Parliament and of the Council on the protection of individuals with regard to the processing of personal data by competent authorities for the purposes of prevention, investigation, detection or prosecution of criminal offences or the execution of criminal penalties, and the free movement of such data<sup>5</sup>. And on 14 April 2016 the Regulation and the Directive were adopted by the European Parliament. On 4 May 2016, the official texts of the Regulation and the Directive have been published in the EU Official Journal in all the official languages. While the **Regulation** entered into force on 24 May 2016, it shall apply from **25 May 2018**. The **Directive** entered into force on the 5<sup>th</sup> May 2016 and EU Member States have to transpose it into their national law by **6 May 2018**.<sup>6</sup> In order to support the early adoption of the GDPR principles, FI-ADOPT has ensured that all sub-projects are following the Data Sharing as a Service (DSaaS) model.

Through the DSaaS, FI-ADOPT also addresses the ***privacy related issues*** as all sub-projects are enforced to anonymise any collected data (either personal or tracking data), while the end-users have the ability to delete any of their own data that are locally collected; as such all FI-ADOPT projects fully respect people's Right to be Forgotten<sup>7</sup>.

### 3. FIWARE Adoption

The technical supervision of the sub-projects during their running period and during the predefined DSP and intermediate reviews has helped us evaluate the utilization of the FIWARE technology and the support of its adoption.

#### 3.1. FIWARE GEs/DSEs utilization planning

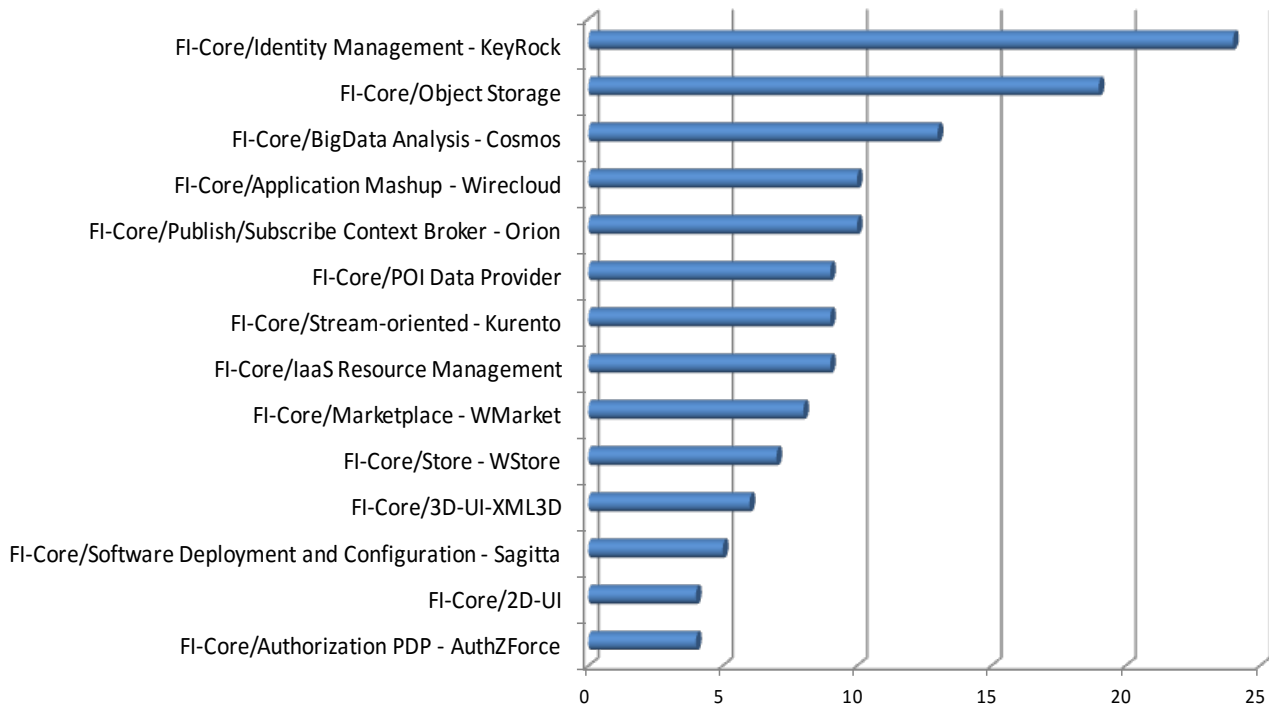

Based on the selected project proposals the average number of GEs/DSEs that each accepted project would utilise was 8.4 GEs/DSEs: Call 1 projects planned to utilize an average of 8.36 GEs/DSEs per project, call 2 projects planned to utilize an average of 8.51 GEs/DSEs per project and call 2 projects planned to utilize an average of 8.42 GEs/DSEs. However, as it is shown in Figure 7, from Call 1 there have been selected 4 projects that were planning to use more than 10 GEs/DSEs and 3 projects that were planning to use at least 7 GEs/DSEs. Yet, the majority of the projects in all three calls were planning to use between 4 and 7 GEs/DSE. Only a few projects (3) have been selected to utilize only 4 GEs and there are no projects selected to use less than 3 GEs.

**Figure 7: Number of GEs to be used**

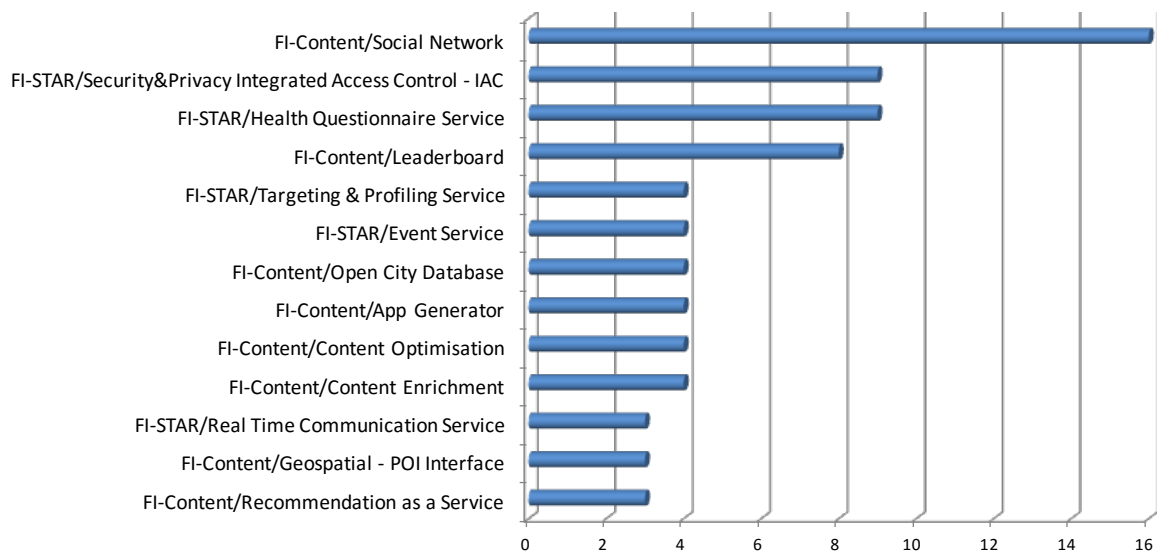

Though the average number of GEs/DSEs that have been selected to be used by each group of projects is almost identical (between 8.32 and 8.51 GEs/DSEs per project), the number of different GEs/DSEs that have been selected to be used differ significantly: in call 1 projects there are 25 GEs/DSEs selected by 13 projects (in average 1,9 different GEs/DSEs per project), in call 2 projects there are 19 GEs/DSEs selected by 12 projects (in average 1,6 different GEs/DSEs per project) and in call 3 projects there are 11 GEs/DSEs selected by 7 projects (in average 1,5 different GEs/DSEs per project). This could be explained by the fact that the deadline for call 3 was 9 months after call 1. Within this period some GEs/DSEs have become more mature, publishing new versions, while others have given the impression to be stopped or at least not sufficiently supported or not having a community behind them.

As shown at Figure 8, at planning (proposal) time, the FI-Core KeyRock GE (Identity Management), the Object Store and the Cosmos GE (Big Data Analysis) have been the most popular GEs. From the 32 selected projects, 24 have declared that they are planning to use the KeyRock GE, 19 to use the Object Store and 13 to use the Cosmos GE, followed by WireCloud GE and Orion GE, that there are 10 projects that were planning to utilise them.

**Figure 8: The most selected GEs to be used per selected project (Plan)**

Similarly, the FI-Content Social Network, the FI-STAR/Security & Privacy Integrated Access Control and the FI-STAR/Health Questionnaire Service have been the DSEs that were planned to be used by most projects (Figure 9).

**Figure 9: The most selected DSEs to be used per selected project (Plan)**

### 3.2. FIWARE GEs/DSEs actual utilization

After the final review, all projects have utilized at least 3-4 GEs/DSEs. Some have already integrated more than 10 GEs/DSEs and some even more than the ones that they initially planned. As shown in Figure 10, the call 1 projects reached a final integration rate of 78% (up from 66% during the intermediate review), the call 2 projects an integration rate of 72% (up from 63% during the intermediate review), and the call 3 projects an integration rate of 79%. (up from 74% during the intermediate review). This is justified as call 1 projects started on 1 January 2015 but most of them have duration of 12-15 months, while call 3 projects started on 1 July 2015 but they have duration of 9 months and intermediate review took place in Month 7.

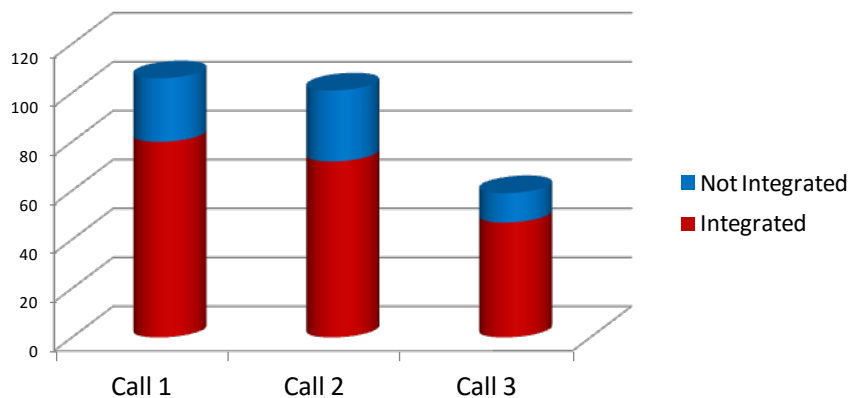

Figure 10: Finally integrated vs. Finally not integrated GEs/DSEs

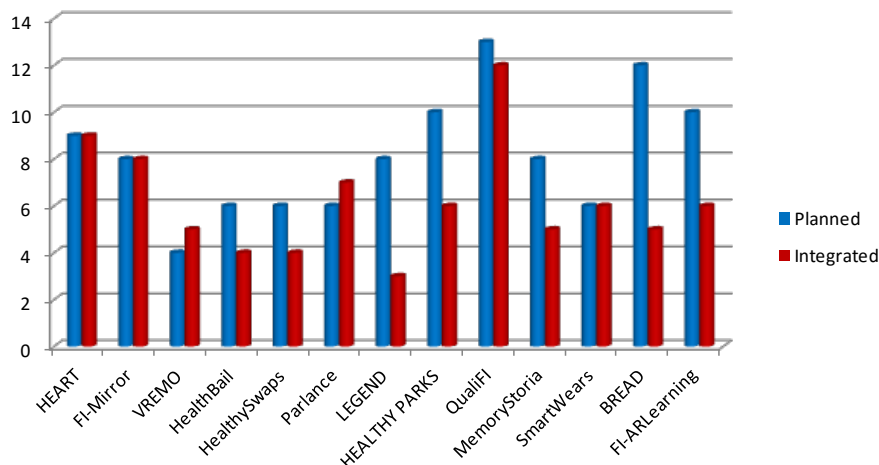

Figure 11: Call 1 Projects Planned vs. finally integrated GEs/DSEs

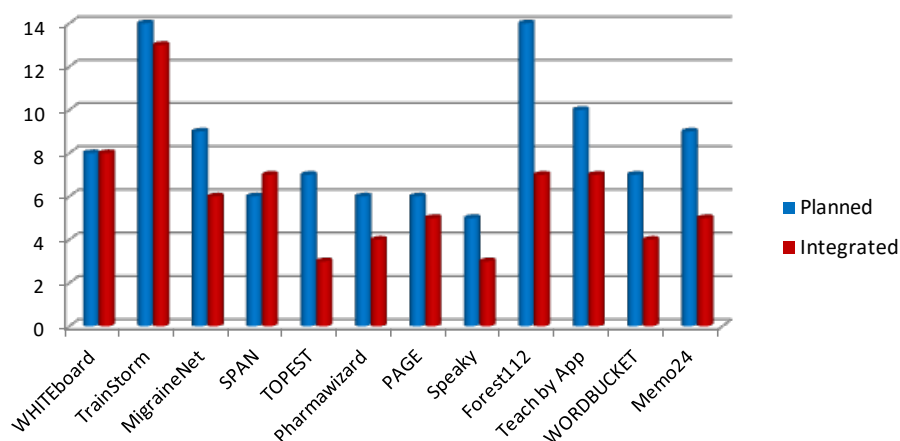

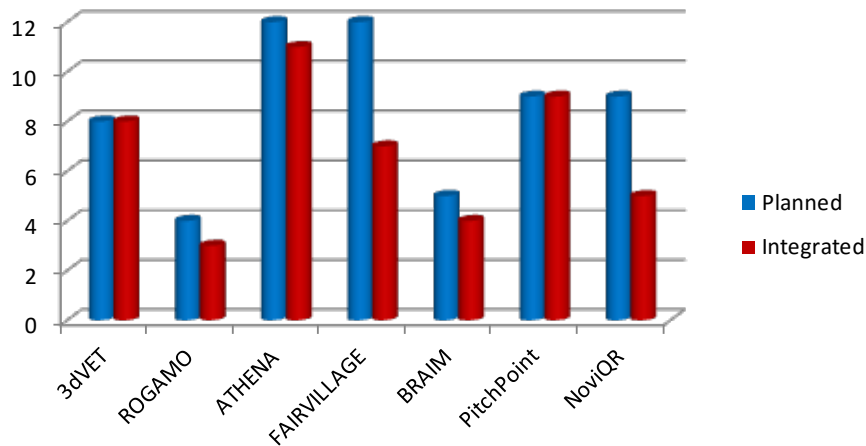

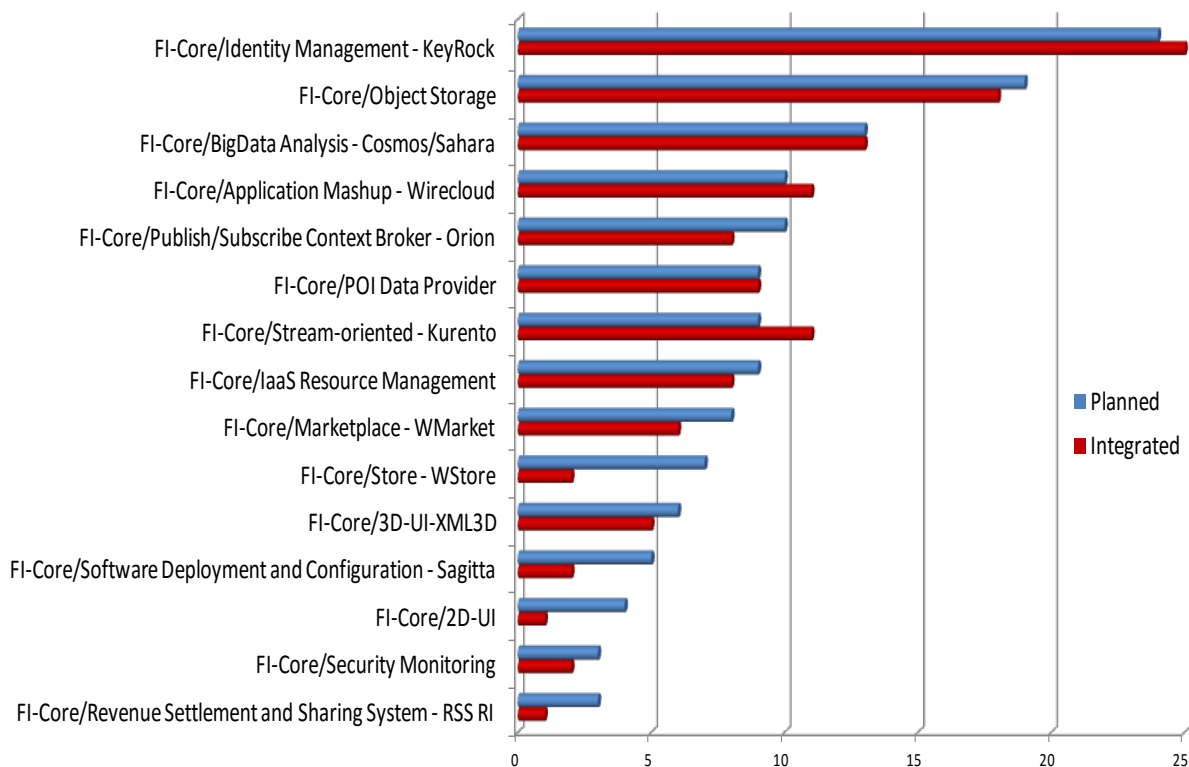

Figure 12: Call 2 Projects Planned vs. finally Integrated GEs/DSEs

As shown in Figure 11, call 1 projects planned to integrate 107 GEs/DSEs and have finally integrated 80. Figure 12 shows the call 2 projects, which planned to integrate in total 101 GEs/DSEs and have finally integrated 72. Figure 13 shows the call 3 projects, which planned to integrate in total 59 GEs/DSEs and have already integrated 47.

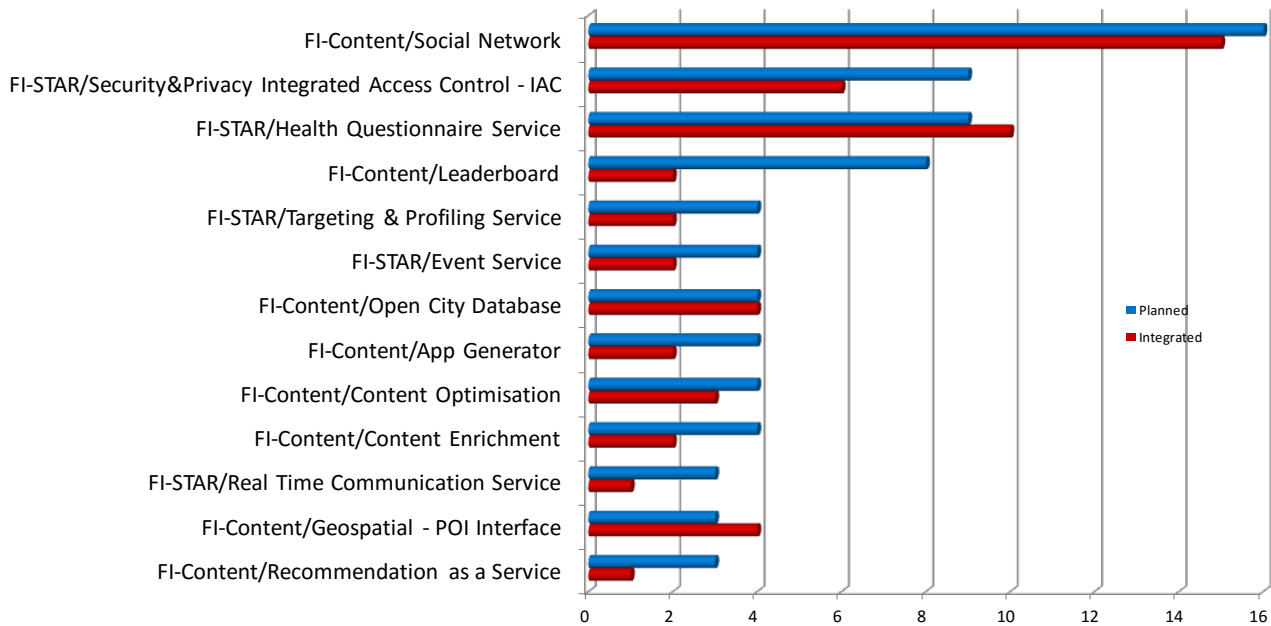

**Figure 13: Call 3 Projects Planned vs. finally Integrated GEs/DSEs**

Figure 14 shows the 15 most popular GEs and the actual utilization, where integration reached 87%. As it is shown the most popular GEs are the KeyRock, the Object Store, the Cosmos/Big Data Analysis, the Wirecloud and the Kurento. It is important to note that KeyRock, Wirecloud and Kurento have been used more than initially planned.

**Figure 14: The 15 most selected GEs planned to be used and finally integrated**

Figure 15 shows the 13 most selected DSEs, where integration reached 72%. The FI-CONTENT/Social Network, FI-STAR/Questionnaire and FI-STAR/Security & Privacy have been the most popular DSE, which have been integrated in more applications, followed by FI-CONTENT/Open City Database and FI-CONTENT/Geospatial DSEs.

**Figure 15: The most selected DSEs planned to be used and already integrated**

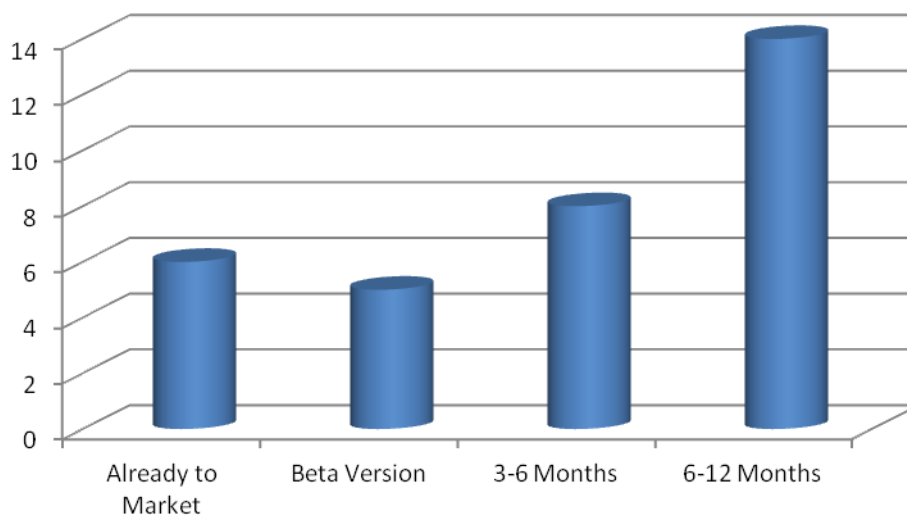

On the other hand, some GEs/DSEs that were initially planned to be used have been dropped or will not be integrated due to one of the following reasons:

- a) **The GE/DSE was not sufficiently mature.** During the integration of the GE/DSE it turned out that the software component was not sufficiently mature and/or could not compete with solutions already available in the market. In that case, the relevant projects have been advised to replace them with the one available in the market given that a sufficient number of FIWARE components are already integrated or will be integrated.
- b) **The GE/DSE was not sufficiently supported.** Within this period some GEs/DSEs have become more mature, publishing new versions, while others have given the impression to be stopped or at least not sufficiently supported or not having a community behind them. Moreover, FI-Core has selected to support only a subset of GEs/DSEs and the remaining components are not officially supported. This has resulted in dropping many of the selected GEs/DSEs or replacing them with similar ones
- c) **The GE/DSE was selected by mistake.** In some cases, the GE/DSE description was misleading or the applicants had not understood it correctly. During the training sessions, the GE/DSE operation was clarified and a different GE/DSE was selected.

## 4. Conclusions

Two years after the 1<sup>st</sup> group of FI-ADOPT subprojects kicked-off, all projects have utilized at least 3-4 GEs/DSEs. In that sense, FI-ADOPT may be considered fully successful as far as FIWARE technology promotion. Some projects have already integrated more than 10 GEs/DSEs and some even more than the ones that they initially planned.

Beyond the technical evaluation and FI-ADOPT adoption, all projects are reviewed in order to check their time to market and their sustainability. Currently the project schedule for time to market are shown in Figure 16.

**Figure 16: FI-ADOPT sub-grants time to market**

The following 5 sub-grants have already entered the market:

- 1) Ref. 108/MemoryStoria (<https://www.memorystoria.com/>)
- 2) Ref. 112/Legend (<https://leverade.com/en/>)
- 3) Ref. 208/ Speaky (<https://www.gospeaky.com/>)
- 4) Ref. 209/Forest112 (<http://forest112.com/>)
- 5) Ref. 212/Memo24 (<https://www.memo24.net/>)

Additional 4 sub-grants already had trials with end-users and are under beta testing:

- 1) Ref. 107/ [HEART](#)
- 2) Ref. 203/[MigraneNet](#)
- 3) Ref. 210/[Teach by App](#)
- 4) Ref. 307/[noviQr](#)

Some selected success stories from the projects that are supported by FI-ADOPT are:

- **Legend (now under the name Leverade):** The project is already in the market with more than 741.000 users. It has scheduled more than 6.600.000 events! It has been selected from the Municipality of Madrid, the Municipality of Marbella, the Region of Murcia and many more.
- **Speaky:** The project is already in the market. It has more than 100.000 registered users and has already received investment of 250.000€.
- **BRAIM:** The project is already in large scale pilots in Catalonia, with more than 70.000 users

- **PAGE:** The project is already in testing in Telecom Italia labs. Moreover, in February 2016, WLAB (as part of the NEXSE) was acquired by the ALTEN group ([http://www.alten.it/wp-content/uploads/2016/02/Press-release-NEXSE-ENG\\_ITA.pdf](http://www.alten.it/wp-content/uploads/2016/02/Press-release-NEXSE-ENG_ITA.pdf))

Also some very interesting statistics:

- **SMEs Income:** At the beginning of the acceleration phase, the income from activities related to FI-ADOPT of the top-15 companies (January 2015) accounted for a global sum of 104.000€. Towards the end of the acceleration, the income from activities related to FI-ADOPT reached 1.780.000€ (April 2016). That is an increase of a 1700% in 15 months (of course any funding from FI-ADOPT has been excluded in these calculations). In total, by the end of 2016, we estimate that for each 1€ spent by FI-ADOPT, additionally 1.5€ to 1.7€ will be created.
- **Jobs:** the number of jobs in activities related to FI-ADOPT in the top-15 companies at the beginning of the acceleration was 24. By the end of the acceleration it is 62. That is an increase in jobs of over a 258% in 15 months. Projections for the end of 2016 indicate around 80-85 full-time employees in these 15 companies.
- **Income per employee.** In the top-15 FI-ADOPT companies, income per employee has significantly increased from an average of 4,334€/emp. to 28,710€/emp. As such we expect that many of the created jobs will sustain well after the end of FI-ADOPT.
- **Users (B2C market):** The top-5 FI-ADOPT companies started with 22.300 registered users and have already exceeded 950.000 users (more than 420.000 in activities related to FI-ADOPT). Especially the top three companies: **Leverade**(<https://leverade.com/en/>), **GoSpeaky** (<https://www.gospeaky.com/>) and **Documenta Creaciones Multimedia Avanzadas** (<http://www.mydocumenta.com/>) sum more than 870.000 users in total (at least 392.000 users related to FI-ADOPT activities). It has to be noticed that most of the FI-ADOPT business models are based on free users' access .
- **Paying customers (B2B market):** Five companies offer already their FI-ADOPT related products and rose their customer base from 2 paying customers at the beginning of the acceleration to 263.
- **Creation of SMEs:** Three of the groups of individuals, who submitted a proposal, were converted to SMEs; one in Italy (**Seides s.r.l.** supporting the [www.foodways.world](http://www.foodways.world) market-place/community), one in Poland (**Memo24**, <https://www.memo24.net/>) and one in Israel (**noviQr**, <http://noviqr.com>).
- **Additional private & public funds:** Five FI-ADOPT supported companies have already received 550K€ from private funding, two of them have being partially acquired (the amount has not been disclosed) and two additional companies are in the process of raising funding from Venture Capitals. In addition, three companies have received 377K€ additional public funding and three companies will submit proposals in June 2016 requesting in total 1.44M€ additional public funding.

Please note that the above information is based on feedback from our sub-grants and public info at their websites, and have not been further verified.

## 5. Annex Evaluation Forms

### 5.1. Final Evaluation Form

 <b>FI-Adopt</b> <small>Embracing the future Internet technology</small>
<b>Consolidated Review Form</b>
<b>Date of Review:</b> <b>Proposal Acronym:</b>
<b>1. Technical Excellence</b> <i>Give a short evaluation of the Technological Progress. Is the project progressing well?          Is it likely that it will complete the proposed work?</i>
<b>2. FIWARE Adoption Acceleration</b> <i>Give a short evaluation of the FIWARE technology adoption. Does the application sufficiently use the FIWARE technology?          Are there sufficient plans for testing and validation using FIWARE facilities?</i>
<b>3. Market Readiness</b> <i>Give a short evaluation of the market readiness. Is the sustainability/draft business plan still valid?</i>
<b>Overall Evaluation</b> <input type="checkbox"/> Excellent progress (the project fully achieved its objectives). <input type="checkbox"/> Good progress (the project achieved most of its objectives with minor deviations). <input type="checkbox"/> Acceptable progress (Some objectives are achieved; corrective actions are required). <input type="checkbox"/> Unsatisfactory progress (Urgent corrective actions or the project will be stopped)
<b>Recommendations</b> 1. . 2. . 3. . 4. .
