

Short relation on the scientific stay in Paris (16/2/15-19/2/15)

I was invited to the conference “Spin Glasses, Random Graphs and Percolation ”, held at Institut Henri Poincaré (Paris). There, I gave an invited lecture on “A class of (2+1)-dimensional growth processes with explicit invariant measure”; this was based on results I have obtained during the first few months of Marie Curie fellowship in Roma Tre. In addition, I had very fruitful scientific exchanges with experts in the field (especially H. Spohn).
