

Short relation on the visit of Robert Morris to Roma Tre  
(in the framework of the DMCP Marie Curie project)

Robert Morris, researcher at the "INSTITUTO NACIONAL DE MATEMÁTICA PURA E APLICADA" di Rio de Janeiro, Brasil, visited the Department of Mathematics and Physics of Roma Tre the 28th and 29th of May, 2015. He gave a seminar on "Universality for bootstrap percolation in two dimensions". He also discussed with F. Martinelli, P. Caputo and myself on the connection between bootstrap percolation models and the slow relaxation of Glauber dynamics for certain constrained spin systems.
