New RSS feeds launched by Science for Environment Policy

Two new RSS feeds on the Science for Environment Policy website are launched today, 29 April. These provide even greater choice in how you access the free research news service.

You can now subscribe to the Latest News Alert RSS feed, which alerts you to articles in the latest weekly issue of the News Alert. It can be accessed from here: http://ec.europa.eu/environment/integration/research/newsalert/latest_alerts.htm 

You can also subscribe to the RSS feed which alerts you to the latest online publication of special monthly Thematic Issues. Access from here: http://ec.europa.eu/environment/integration/research/newsalert/specialissue_en.htm 

These two new feeds add to the popular RSS feeds for individual policy themes, launched earlier this year, which inform subscribers of articles in their specific area of interest, such as Air pollution, Biodiversity, Chemicals or Water. To explore these, please click on 'Archive by Theme' from the menu on our homepage: http://ec.europa.eu/environment/integration/research/newsalert/index_en.htm 

Science for Environment Policy is a free news service designed to strengthen links between environmental research and policy. It provides easy-to-read summaries of policy-relevant research and there are several ways in which it can be accessed, including via RSS feeds.

Subscribers to the email service receive weekly news alerts, which cover a wide range of topics. Subscribers also receive special Thematic Issues which each take an in-depth look at a topic high on the policy agenda. To subscribe to the email service, simply send an email to sfep@uwe.ac.uk with the subject line 'Subscribe SfEP'.

All articles and Thematic Issues are posted online and can be viewed at:

A recent independent survey carried out amongst subscribers to the Science for Environment Policy News Alert revealed a high degree of satisfaction with the service. 97% of respondents claimed to find the service useful, including 38% who considered it very useful.

Other interesting findings from the survey include that the vast majority of respondents found that the News Alert keeps them up to date with the latest environment policy relevant scientific research (93%), provides useful summaries of high quality scientific research (92%) and makes it easier to understand what is going on in environmental research (83%). For more details of the survey's findings, please go to:

http://ec.europa.eu/environment/integration/research/pdf/survey_subscribers.pdf 

Science for Environment Policy is published by the European Commission's DG Environment and is edited by the Science Communication Unit at the University of the West of England.
