## An interactive programme on floppy disk from COSINE

The COSINE Project Management Unit has announced the release of a valuable aid to new and potential users in the form of an introductory interactive programme supplied on a single floppy disk in versions for Macintosh, Windows and DOS. The programme will shortly be made availa...

The COSINE Project Management Unit has announced the release of a valuable aid to new and potential users in the form of an introductory interactive programme supplied on a single floppy disk in versions for Macintosh, Windows and DOS. The programme will shortly be made available by file transfer.

COSINE, a EUREKA project sponsored by 18 European governments as well as the European Community, aims to establish a pan-European OSI standards-conforming computer communications infrastructure for all academic, industrial and public sector R&D workers. The implementation phase, which began in 1990, includes a number of pilot sub-projects and the provision of pilot services.
