

Software and related services for implementation of a public key infrastructure

The Joint Research Centre requires software and related installation, configuration and maintenance services for the operation of a public key infrastructure (PKI) based on the International Telecommunication Union ITU.X.509 standard. This includes the PKI server software and...

The Joint Research Centre requires software and related installation, configuration and maintenance services for the operation of a public key infrastructure (PKI) based on the International Telecommunication Union ITU.X.509 standard.

This includes the PKI server software and a number of client applications, toolkits and components necessary to integrate the PKI with existing applications.

The tender is not divided into lots.
