Tender: electric armour for armoured vehicles

The European Defence Agency has launched a call for tenders for a study on electric armour for armoured vehicles. The study shall develop a roadmap for a common effort regarding the development of electric armour for armoured vehicles, including a description of the state-of-the-art and an analysis of the capability benefits of electric armour.

A test case for a medium-weight armoured vehicle will be outlined, having both a possible architecture and a discussion of system integration. Finally, key technologies need to be identified and the associated roadmaps developed. For further information, please contact:
