A repertory of resources available, and of projects and research being carried out, in the field of distance learning is available on the "Telematics for Libraries" Web site on the I'M-Europe WWW server.

The site features a list of links chosen as an initial guide to the vast amount of information on distance learning currently available on the Web. It includes:

- Links to the home pages of projects being carried out under the "Telematics for Libraries" sector of the Telematics Applications programme, as well as to other related EC initiatives;
- Links to a variety of Internet training resources and other general Distance Learning resources;
- Links to the sites of research institutes.

Suggestions for further sites of interest to be included in this list are welcome.
