# 1 INTRODUCTION

PRO-IDEAL – PROMotion of an ICT Dialogue between Europe and America Latina – aims to promote the ICT programme in Argentina, Brazil, Chile and Uruguay, and complementary in Colombia. PRO-IDEAL activities, such as coaching courses for potential project participants and ICT promotion through the Web 2.0 PRO-IDEAL platform ([www.pro-ideal.eu](http://www.pro-ideal.eu)), are geared at improving the overall performance of the Latin America research community in the ICT programme.

For the scientific, technological and industrial communities of all the PRO-IDEAL target countries, and in general of Latin America, the FP7-ICT programme represents a tremendous opportunity to participate as equal in common international projects alongside great centres of excellence and European companies.

With regard to the past and current participation in ICT projects, overall the participation of Latin America countries shows a positive trend, although only Brazil, Argentina and Chile are among the top 10 third countries participating in ICT projects. Nevertheless, expectations have not always been met and the participation of research institutions and companies from the target countries in the ICT programme is still lagging behind their potential.

Currently, several entry barriers prevent the desired growth in international projects participation. Among others, we find barriers related to information, such as lack of access to relevant information, as well as the misunderstanding of "Eurojargon" in calls for proposals and work programmes. There are also other potential barriers, besides the lack of information, such as difficult access to potential partnerships as well as lack of knowledge about success factors when planning a project or participating in a consortium. PRO-IDEAL activities attempt to minimize these barriers, by generating useful and relevant information for potential participants.

The main objectives of this document are to identify, screen and analyze successful ICT projects with international participation, and to extract their success factors applicable to the PRO-IDEAL target region. For that purpose, coordinators and third countries participants of several ICT projects were contacted and interviewed, asking them to fill in a questionnaire regarding the factors that may be relevant for their project success.

An overview of international cooperation ICT projects is provided in Section 2 of this deliverable, while the analysis of the success factors is presented in Section 3.

## 2 ICT INTERNATIONAL COOPERATION PROJECTS

International cooperation across the ICT programme is increasing with FP7 International Cooperation Partner Countries (ICPC) covering participants established in regions outside Europe<sup>1</sup>: ACP, African, Caribbean, Pacific, Asia, Eastern Europe and Central Asia (EECA), Mediterranean Partner Countries (MPC), Western Balkan Countries (WBC) and Latin America.

In this chapter we provide a snapshot of international cooperation projects with ICPC participants in the field of ICT, within the Sixth and Seventh Framework Programmes (FP6 and FP7), comparing the participation by region, with special focus on Latin America and the PRO-IDEAL target countries (Argentina, Brazil, Chile and Uruguay). Also we have considered North America (USA and Canada) due to the increasing participation of these countries in European research projects. Our analysis is based both on information published on CORDIS about ICT projects selected for funding, and the knowledge of the Consortium about ICT related projects. CORDIS search engine is accessible at the following addresses:

- <http://cordis.europa.eu/search/index.cfm?fuseaction=search.advanced>
- [http://cordis.europa.eu/fp7/projects\\_en.html](http://cordis.europa.eu/fp7/projects_en.html)

### 2.1 ICT projects by region/country

Overall there are 242 ICT projects with third countries participants, 163 in FP6-IST programme (20002-2006) and 79 projects in the first two years of FP7-ICT programme. These figures reflect positive trend in international cooperation between Europe and third countries and increasing interest in all regions of the world to participate in FP7.

The list of the projects identified by acronym can be seen in Table 1 at the end of this chapter. The chart below shows the regions/countries with more participation in ICT projects in FP6 and FP7. Due to the large number of projects in which they participate, China, India, Russia and South Africa are shown outside their original region.

No. projects per region		
	FP6	FP7
NORTH AMERICA	23	24
CHINA	47	16
LATIN AMERICA	26	13
WESTERN BALKAN COUNTRIES	17	10
SOUTH AFRICA	14	8
RUSSIA	37	8
AFRICA	5	6
MEDITERRANEAN PARTNER COUNTRIES	6	4
EASTERN EUROPE AND CENTRAL ASIA	13	4
INDIA	14	4
CARIBBEAN	0	2
ASIA	7	2
PACIFIC	0	0

<sup>1</sup> See the list of ICPC in Annex 2

Regarding FP7, North America, including USA and Canada, is the most important region so far in terms of number of projects in which participates. This region is participating in 24 FP7-ICT projects, so far two more projects than in all FP6.

While China in FP6 doubled the participation of North America, his current participation in FP7 is lagging behind.

Latin America is currently the third region in number of projects. By 2008, it had 13 ICT projects, which is half of what it had in FP6, and the region shows a great potential of participation in international research projects.

The Tables 2 and 3 show the projects in which each region/country participates, in FP6 and FP7 respectively. It can be noticed that one project can involved partners from one or more regions.

## 2.2 ICT Projects participation in Latin America countries

The analysis by country shows that in most cases the participation of Latin America countries in ICT programme is still lagging behind their potential. Latin America participation in ICT projects is being leading by Brazil and Argentina, followed by Chile. The name of the projects and countries participating can be seen in Tables 4 and 5.

In FP6, 12 out of 17 Latin America countries participated in ICT projects. Brazil was involved in 14 projects, Chile in 5 and Argentina and Mexico in 4 projects each. As for the two first years of duration of FP7, 8 countries, out of 17 have been participated. The leading countries in terms of number of projects are Argentina with 6 projects, Brazil with 5, Chile with 4 and Uruguay with 3, being PRO-IDEAL one of these projects. It can be mention Colombia with two ICT projects in FP7.

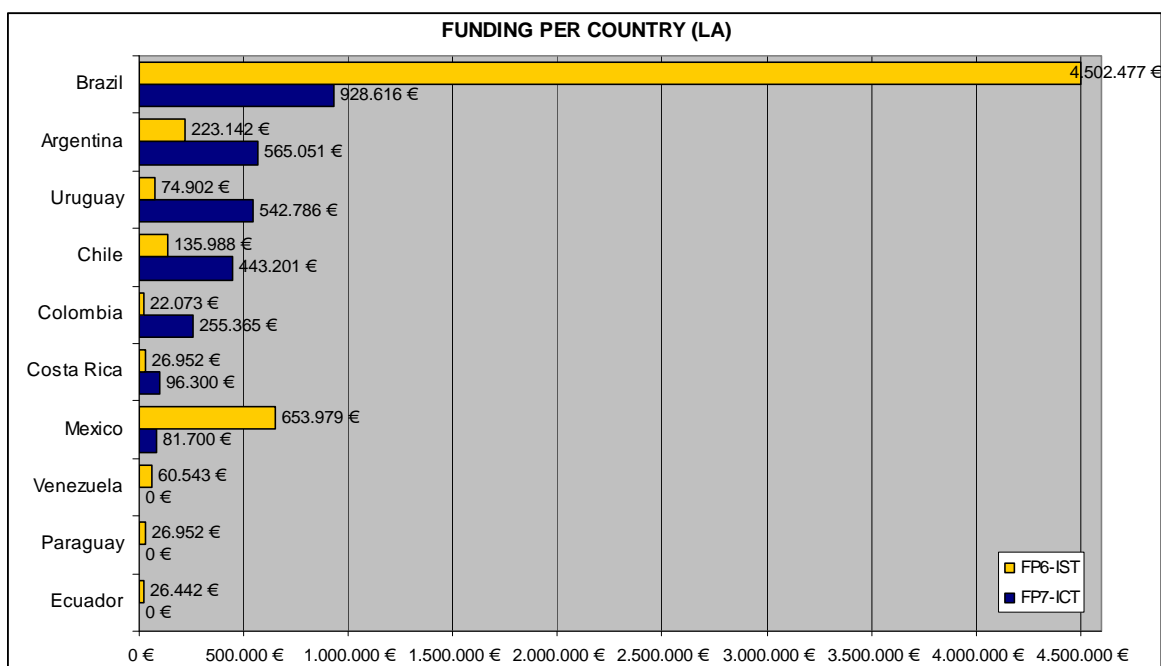

As shown in the graphic above, a number of Latin America countries are scarcely represented in ICT. That is the case of Mexico, Costa Rica, Guatemala, Peru and Honduras with only one project so far in FP7; and countries like Ecuador, Paraguay and Venezuela that have no participation in FP7 yet. This may show a lack of

information of some Latin American countries on how to participate in EU programmes.

In terms of funding received from the EU, there is a big gap between Brazil and the rest of Latin America. In FP6 only Brazil received a significant amount, with more than 4 million Euro in total. Mexico, with 4 projects in FP6 received around 654.000 Euro. Currently, Brazil continues in the first position but still far from the amounts of FP6.

The following graphic shows the amount of funding received by Latin American countries, comparing FP6 and FP7. Further details of funding distribution by country can be seen in Table 6.

## 2.3 Latin American position in third countries participation

Brazil, Argentina and Chile are within the top 10 countries participating in ICT projects, although considering the number of projects these countries are in the last position, while the ranking is lead by the USA and China, with 19 and 16 ICT projects in FP7 respectively.

In terms of funding received by the European Union, Brazil improves significantly the position on the top ten countries and it places in the fourth position, after Russia, USA and China.

Argentina, Uruguay and Chile are also within the top ten countries. In fact, the overall funding for the four Latin countries in the two first years of FP7 is 2.480.000€, or the 28% of the total funding for the top ten countries.

Nevertheless, Russia alone has received 2.300.00€ in the same period or the 26% of the funding for the top ten countries. Almost de same amount as the four Latin American representatives.

Detail information about funding received by the top ten countries is provided in Table 7.

## 3 SUCCESS FACTORS FOR INTERNATIONAL COOPERATION IN ICT PROJECTS

### 3.1 *Methodological approach*

For the analysis of success factors for participating in international cooperation projects in the field of ICT we have conducted a survey to participants in ICT projects with International Cooperation Partner Countries (ICPC).

After screening the ICT projects database identified in section 2, a convenience sample was selected on the basis of the following criteria:

- a) Availability of contact details –such as name, e-mail and telephone number- of the project coordinator,
- b) Availability of at least one contact detail of third country participants (ICPC and/or other third countries, such as USA and Canada).

#### 3.1.1 Sample profile

After an exhaustive research of those projects that may cover the requirements, we select a sample of 65 projects, with the following characteristics:

- **By Framework Programme**
  - 23 projects of FP6
  - 42 projects of FP7
- **By Sub programme:**
  - 60 IST/ICT projects
  - 5 Capacities projects

Although not belonging to ICT, we have included 5 projects from the Capacities programme within international cooperation or research infrastructures areas. These projects are: EELA-2, EULARINET, B-BICE, GLOBAL and BELIEF, all of them with strong participation of Latin American partners and open to collaborate with PRO-IDEAL.

- **By type of project:**
  - 25 Collaborative Projects including:
    - 14 Integrated Project (IP)
    - 11 STREPs
  - 38 Coordination and Support Action (CSA)
  - 2 Networks of Excellence (NoE)

The list of sampled projects and detailed description of them can be seen in Annexes 3 and 4 respectively.

A semi-structured questionnaire with open-ended questions was specifically designed for this survey (See Annex 1). The questionnaire was sent by email to an overall number of 180 participants, divided as follows:

- 115 third countries participants (most of them from ICPC and some from other third countries).
- 65 project coordinators, all of them from European countries. In order to reach a wide range of third country participants and keep the focus on

survey objectives, we asked all the coordinators to forward the questionnaire to their third country partners and to answer the survey keeping in mind their interaction with international partners only.

The interviews were conducted by email with telephone monitoring. The research was coordinated and supported by INMARK and data collection took place during 17 April-4 May 2009.

### 3.1.2 Respondents profile

Overall, 75 out of 180 participants contacted answer the questionnaire, which represents a response rate of 42%. Most of the respondents (50) are from third countries, while the other 25 are project coordinators from European countries.

Respondents come from 30 different projects, most of them under FP7. Although the majority of these projects are CSA (19), also research projects are well represented (11). The diversity of responses increases the reliability of the study about the success factors in projects with international participation.

No. Projects per programme		No. Projects per Type	
FP6	11	IP	7
FP7	19	STREP	2
N/A	0	CSA	19
		NoE	2
	30		30

Regarding the number of responses received by region/country it is worth to remark the relatively high number of responses from Latin America (40%) and Europe (33%), which can be explained by the interest and expectations of PRO-IDEAL in both regions:

Responses per region / country	
Europe	25
Africa	0
Caribbean	0
Pacific	0
Asia	6
Eastern Europe and Central Asia	0
Latin America	30
Mediterranean Partner Countries	3
Western Balkan Countries	0
South Africa	3
China	4
India	4
Russia	0
	75

As can be seen in the table below, the number of responses from Latin American countries is in line with their level of participation in international cooperation projects.

No. Responses per Country (LA)	
ARGENTINA	7
BRAZIL	7
COLOMBIA	3
COSTA RICA	2
CHILE	4
MEXICO	3
URUGUAY	4
	<b>30</b>

### 3.1.3 Details of the questionnaire

As for its setup, the questionnaire is divided into three main sections, covering a list of issues that can be of relevance for the success of international cooperation projects in three different stages: proposal preparation, project phase and after the project funding phase. Each one includes several statements that have been scored from 1 (being the lowest score) to 5 (being the highest score), according to its relevance towards the project:

- **Success factors during the proposal preparation phase:**
  - Knowledge about the relevant funding programme (ICT/Other Programme)
  - Access to European Commission' key information
  - Understanding of call for proposals procedures
  - Understanding of the work programme
  - Knowledge about specific research areas for international cooperation
  - Access to potential partnerships/Contact with partners
  - Previous experience in EU/international cooperation projects
  - Understanding the rules for participating in European projects
  - Co-financing capacity of my organisation
  - Coordination of the proposal writing
  - Experienced partners in the consortium
  - Experience in topics addressed by the project
  - Perspectives for exploitation of project results
- **Success factors during the project phase**
  - Previous experience in EU/international cooperation projects
  - Understanding the rules for participating in European projects
  - Co- financing capacity of my organisation
  - Level of project innovation
  - Coordination of the project
  - Experienced partners in the consortium
  - Complementarity of the participants
  - Team spirit in implementing project activities
  - Strategic planning of the work
  - Day-to-day management of the project
  - Communication among partners
  - Experience in topics addressed by the project
  - Correlation and benefits for my organisation core activities
  - Perspectives for exploitation of project results

- **Success factors after the project phase**
  - Sustainability of project outcome
  - Knowledge about potential market
  - Knowledge about competitors
  - Business model scenarios (ROI, pricing, etc.)
  - Sound business plan
  - Strategy for transfer of knowledge and innovation
  - Strategy for technology transfer
  - Agreement among partners for exploitation of project results
  - Management of intellectual property

## **3.2 Success factors Analysis. Key findings**

In this section we summarize the main findings of the PRO-IDEAL survey with third countries participants in ICT projects. First we provide an insight on the major success factors of ICT projects involving third countries partners as they are perceived by participants. Secondly, an assessment of potential factors that might determine the level of success of international cooperation projects in the different stages of the project, from proposal preparation after the end of the project.

In regard to Latin America, the survey results show no significant differences with respect to the various regions/countries. Thus, the overall results are displayed, showing all the regions as a unit.

### **3.2.1 Insight on successful ICT projects**

Nearly 80% of participants in ICT projects who responded to the PRO-IDEAL survey say their project has been or is being successfully running.

Most of the respondents perceive the success of the projects is related to three factors: the quality of the consortium (87%), the project coordination (38%) and communication issues (25%). At the same time, some participants mentioned that the success of a project might be jeopardised by local problems in third countries (30%), lack of partner commitment (22%), and inappropriate project management (19%).

#### **Success Factors**

1. The **Quality of the Consortium** is perceived as the most important element of a successful project, and one of the most difficult to achieve, if the consortium searches for excellence in every phase of the project.

Partners and coordinators gave special importance to individual attributes of participants, such as experience and technical background. Emotional abilities of the consortium as a whole, such as team motivation and the willingness to work with partners that incorporate different expertise are also very important. Seeking for a consortium with a real commitment through the overall project phases is considered the first step for a very successful achievement.

2. The **Project Coordination** is the second most important success factor for the respondents. More of them associated a successful coordination with efficient management skills, well defined tasks during the project life cycle, as well as clear work distribution throughout the project partners.
3. **Communication** among the coordinator and partners, and stakeholders is seen as the third most important success factor. It was mentioned the importance of

the use of both, face to face communication as well as alternative communication channels like e-mail, blogging, etc. In addition, respondents say that networking skills at all levels are relevant to communication with any stakeholder and key players in different markets.

### Failure factors

The respondents also mentioned a number of issues that eventually might jeopardize the success of a project.

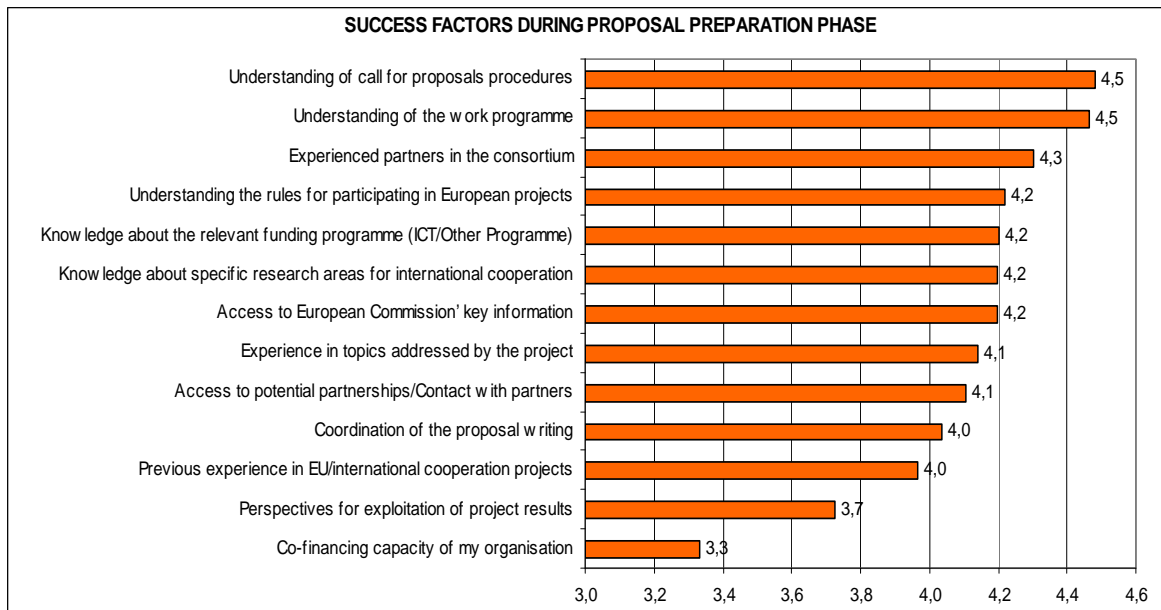

1. **Local problems related to third countries participation** are the most frequently cited, such as the lack of local industry involvement, problems with R&D budget in the local scene, and certain differences in legislation between European countries and third countries, which make it difficult to understand the rules for participation.
2. The **lack of partner commitment** was mentioned as one of the most important problems for project success, which also includes losing focus on the project objectives, poor participation from some participants and lack of commitment of the partners for sustainability of the project results.
3. **The lack of a suitable project management** is also perceived as a problem for projects success, particularly to deal with the EC procedures associated to the contract.

### 3.2.2 Success factors during the proposal preparation phase

Respondents to the survey assessed the importance of a set of factors for the success of ICT projects during different phases of the project, based on the participants' experience. A scale from 1 to 5 was used, being 1 lowest relevance and 5 being highest relevance.

During the proposal preparation phase, we found out that the understanding of the call for proposal procedures and the work programme are considered the most important factors for success. The vast majority of respondents, 91% and 96% respectively, gave the highest scores to these factors that were scored 4,5 on average.

Similarly, 86% of respondents reiterate the relevance of having experienced partners in the consortium, which is considered the third factor for success in the proposal stage and has been scored 4,3.

A second group of factors are associated with the knowledge and access to key information, namely, the rules for participating in EU project, the funding programme and the research areas for international cooperation (score 4,2).

Within this context, the perspectives for exploitation of project results and the co-financing capacity of participant organisations are relatively less important, with scores of 3,7 and 3,3 respectively.

### 3.2.3 Success factors during the project phase

As shown in the graphic below, 10 out of 14 factors assessed in this phase score over 4, which indicates that all of them are very important to the success of the project phase.

The great majority of participants in ICT projects who responded the survey say that the coordination of the project is the most important factor to project success (57% of respondents scored 5), followed by partners' experience. Both factors were scored 4,4.

Similarly, the proper communication between the partners throughout the duration of the project and team spirit are also crucial toward the success conclusion of this phase, since it is very difficult to engage with partners from various disciplines, expertise, and cultures without a clear communication between all partners. More than half of respondents gave the highest score to these factors that were scored 4,3 on average.

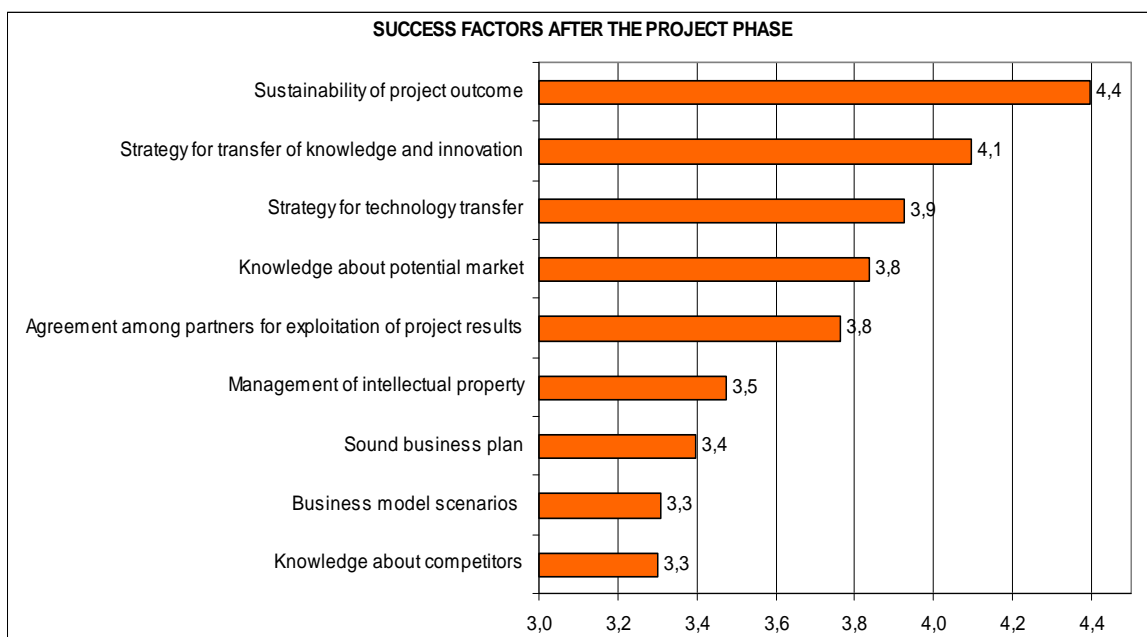

Like in the proposal phase, the co-funding capacity of the organizations involved in the project get the lowest score (3,5). Also it is worth to remark the relatively less importance that the respondents give to the innovation factor during the project phase, as well as to the perspectives for the exploitation of project results and the benefits of the project for the activities of the participant organisations.

### 3.2.4 Success factors after the project phase

The result of the survey shows that the most important success factor after the project phase is related to the sustainability of the project outcome. 95% of respondents say that this factor is important or very important (score 4,5). Actually, as stated above, the lack of partners' commitment for the sustainability of the project was mentioned as one of the potential factors of failure, which shows both the importance of this factor to the exploitation of project results, as well as the complexity to develop it correctly.

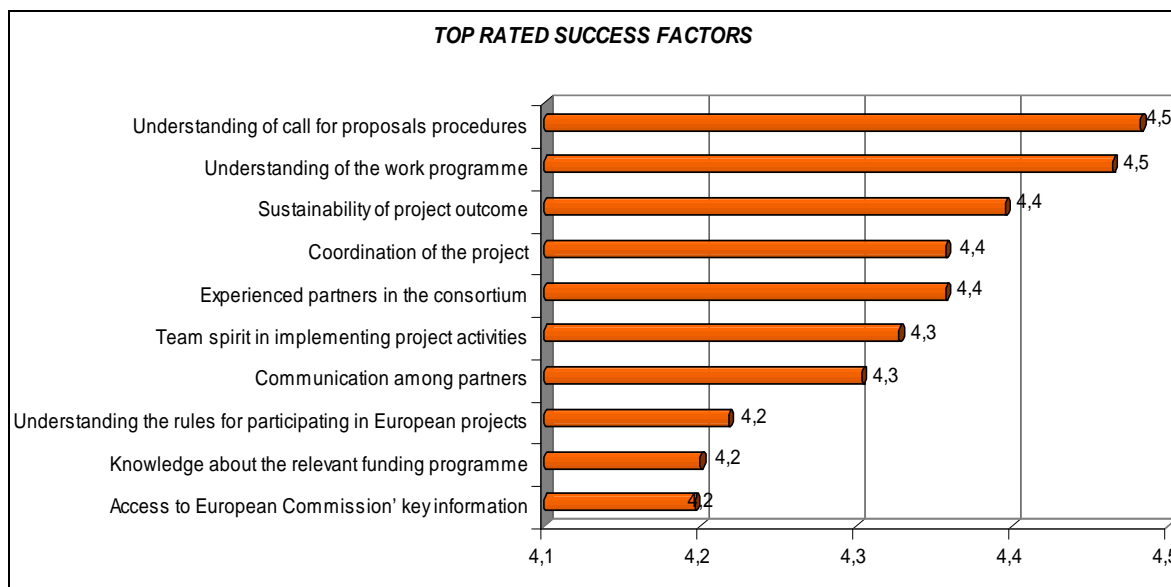

The second most important factor (score 4.1) is the strategy for transfer of knowledge and innovation, while the third success factor is the strategy for technology transfer (score 3,9).

However, factors related to the sustainability of the project itself, such as the elaboration of a sound business plan, including business models, and the knowledge about competitors are the lowest rating success factors (scores 3,4 and 3,3). Actually more than half of respondents say that these factors are scarcely important after the project phase. This perception may indicate that some ICT projects involving third countries participants are still far from understanding the requirements for research results enter into the market in a global competitive scenario.

### 3.2.5 Keys to success in ICT projects

The chart below summarises the top ten success factors considering their assessment as a whole during the project lifecycle, since proposal preparation until some time after the project ends.

We found that five out of the top ten success factors are linked to the need of information and knowledge about European procedures to participate in ICT projects (call for proposal, work programme, rules to participate), which show the major concerns for third countries participants without many experience in international cooperation projects. Four of the top ten factors regard to the coordination and partners experience, and one of them to the sustainability of the projects outcome. The vast majority of respondents (between 78% and 96%) say that all these factors are important or very important for project success and all of them scored over 4,2 in a scale of 5.

The top rated success factors are the understanding of call for proposals procedures and of the work programme, followed by the sustainability of the project outcome. The coordination of the project is at the fourth position in the ranking, followed by experienced partners in the consortium, team spirit and communication issues.

Last but not least, more than 78% of respondents expressed the relevance of understanding the rules for participating in EU projects, the knowledge about funding programmes and in general the access to EC key information.

Therefore, the results of the survey underline the need of key information of third countries to participate in international cooperation projects, in line with the PRO-IDEAL approach to promote and increase the Latin America countries participation in FP7-ICT projects.

## 4 ANNEXES

### ANNEX 1: Questionnaire

**PRO-IDEAL**  
PROMOTION of an Ict Dialogue between Europe and America Latina

**QUESTIONNAIRE to International  
Cooperation projects between Europe and  
third countries participants**

---

**1. Has your project been successfully terminated / is it successfully running?** Yes ☐ No ☐

**2. What have been the main three success factors of your project?**  
a)  
b)  
c)

**3. Did you detect any factor that potentially jeopardised the success of the project?**  
-  
-

**4. Please assess the relevance of the following factors for the success of your project(s) (from 1 lowest to 5 highest relevance):**

<b>4.1. DURING PROPOSAL PREPARATION PHASE</b>	1	2	3	4	5
· Knowledge about the relevant funding programme (ICT/Other Programme)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
· Access to European Commission' key information	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
· Understanding of call for proposals procedures	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

#### MEDITERRANEAN PARTNER COUNTRIES (MPC)<sup>2</sup>

- Algeria
- Egypt<sup>1</sup>
- Jordan
- Lebanon
- Libya
- Morocco<sup>1</sup>
- Palestinian-administered areas
- Syrian Arab Rep.
- Tunisia<sup>1</sup>

<sup>2</sup> These countries are also part of the European Neighborhood Policy (ENP).

#### WESTERN BALKAN COUNTRIES (WBC)

- Albania
- Bosnia-Herzegovina
- Former Yugoslav Republic of Macedonia (FYROM)<sup>\*\*\*</sup>
- Montenegro
- Serbia<sup>3</sup>

\*In the « Specific international cooperation actions», Africa can also be considered as a region on its own, while the Caribbean countries can also participate with Latin American and the Pacific countries with Asia.

\*\*For participation in the « Specific international cooperation actions» each of Brazil, China, India and Russia may be considered individually as a region on its own. Thus, the required 2 or more partners can be located in these countries. However, in this case, at least 2 different partners from different provinces, oblasts, republics or states within Brazil, China, India or Russia are necessary.

\*\*\* On 16/12/2005 the Former Yugoslav Republic of Macedonia (FYROM) became a Candidate Country. FYROM is not an associated country to FP7 and thus remains a target country for International Cooperation Specific Actions

<sup>3</sup> Including Kosovo as defined by UNSC resolution 1244 of 10 June 1999
