

D2.1 Consolidation of EXPAND website as follow up from epSOS

WP 2 Dissemination

16-07-2014

Version 1.0

This document intends to explain the creation and maintenance of the EXPAND website. It will be updated when the design of version 3 will be completed, which will follow after the launch of WP5.

CONTROL PAGE OF DOCUMENT	
Document name	D2.1 Consolidation of EXPAND website as follow up from epSOS

Executive Summary

This deliverable, D2.1 Consolidation of EXPAND Website as follow-up from epSOS, is the first elaborated of WP2 Dissemination and will be followed by two Dissemination Activity Reports (in Month 12 and 24) covering the different actions performed to promote the EXPAND project and its idea during the respective years. This document is supposed to explain the creation and maintenance of the EXPAND website. However, it is not to be understood as manual for the website tool used in the project. Such a manual can be found in the respective Projectplace folder (see referred documents).

At the time of delivering this Deliverable, the EXPAND website is in a face-lifting process in order to be more appealing and dynamic. This document will be updated when the design of version 3 will be completed, which will follow after the launch of WP5.

1. Aim and purpose of the website

The main objective of the performance of dissemination activities in EXPAND is to ensure that the vision, progress and outcomes of the project are well known, communicated and recognized, in order to create the necessary conditions so that to increase know-how of interested stakeholders and parties.

The project dissemination channels can be distinguished into internal and external information channels. In EXPAND the internet will be used as the central dissemination channel to publish information for project externals. Via the project website, reachable under <http://www.expandproject.eu>, relevant information will be provided. News and updates shall primarily be conveyed over the project's Twitter channel available under <http://twitter.com/expandproject>. Other important dissemination activities will be the project's attendance and presentation at different (inter)national events related to the EXPAND, articles published and press releases/newsletters distributed. Those occasional dissemination activities undertaken are collected in the Dissemination Activities File stored on Projectplace. Ongoing WP2 maintenance activities (e.g. website updates as the upload of a new deliverable or the addition of an article to the press section) are not part of this list but shall be explained in the yearly Dissemination Activity Reports (D2.2 and D2.3) separately.

Internal project dissemination is under WP1 responsibility. Main instruments used there are again the internet (Projectplace, E-Mail, etc.) but also telephone conferences and f2f meetings.

2. General provisions/information on the website provision

One of the ideas at the beginning of the project was to completely move the epSOS content to the EXPAND website to allow a closure of the epSOS website (www.epsos.eu). However, since the epSOS project consortium decided at a later point of time to continue keeping the project's website as it is online after the project terminates in June 2014, no content from the epSOS homepage was shifted to the EXPAND website. Thus, the new strategy concentrated on using only parts from the epSOS website for the EXPAND homepage (e.g. the Links section).

During the negotiations with the European Commission the EXPAND project coordination made clear that a license free tool for the development and maintenance provision of the project's website should be used in order to avoid exhausting the project's budget. As a result, the EXPAND project team decided to use the free (Open Source), web-based software program WordPress that anyone can use to build and maintain a website or blog. Additionally, the project coordination decided to use only internal resources at SPMS to set-up and technically operate the project's website. The responsibility of WP2 on the other side is to provide content for the website and to maintain it from a journalistic perspective.

WORDPRESS

3. History of alteration

Among other points, the checklist from the EC in the communication guideline for ICT PSP projects foresees projects to have as soon as possible (around 6 weeks after project start) a project website available.

3.1. Version 1 of the EXPAND website

In December 2013, before the official project start, the EXPAND project coordination elaborated a draft text to be placed on the front page of the EXPAND project website at the very beginning of the project (01.01.2014). The text was revised by the Leader of WP2 only since there were no resources available from the Work Package 2 members at that time given that EXPAND had not yet officially started. It was though agreed to have this text, together with the other texts for the more detailed sections, reviewed in Work Package 2 and by the different experts after the project launch. Due to administrative issues the publication of the first, very basic website version with the initial text was delayed until end of January. However, with the launch 4-5 weeks after the project start the deadline of the EC to make the project website available within the first 6 weeks could still be met. At the same time WPL2 was provided by SPMS with access to the Content Management System (CMS = backend access) to allow WP2 to take over the journalistic maintenance. Thus, the first version of the EXPAND website launched end of January under www.expandproject.eu contained only one site with basic project information as described above.

3.2. Version 2 of the EXPAND website

After the launch of the EXPAND website version 1 end of January 2014 WPL2 started to draft content for a more informative project website. Also, content from the epSOS website was consolidated to generate the EXPAND internet appearance. The draft documents with content for a more comprehensive EXPAND website together with the idea of the EXPAND website structure and different open points were sent in the beginning of February 2014 to Work Package 2 members, the industry representative and EXCO for review and feedback.

Figure 1 beneath shows the draft mind map for the EXPAND website structure elaborated by WPL2 which was discussed with(in) the different boards before the release of the EXPAND website version 2.

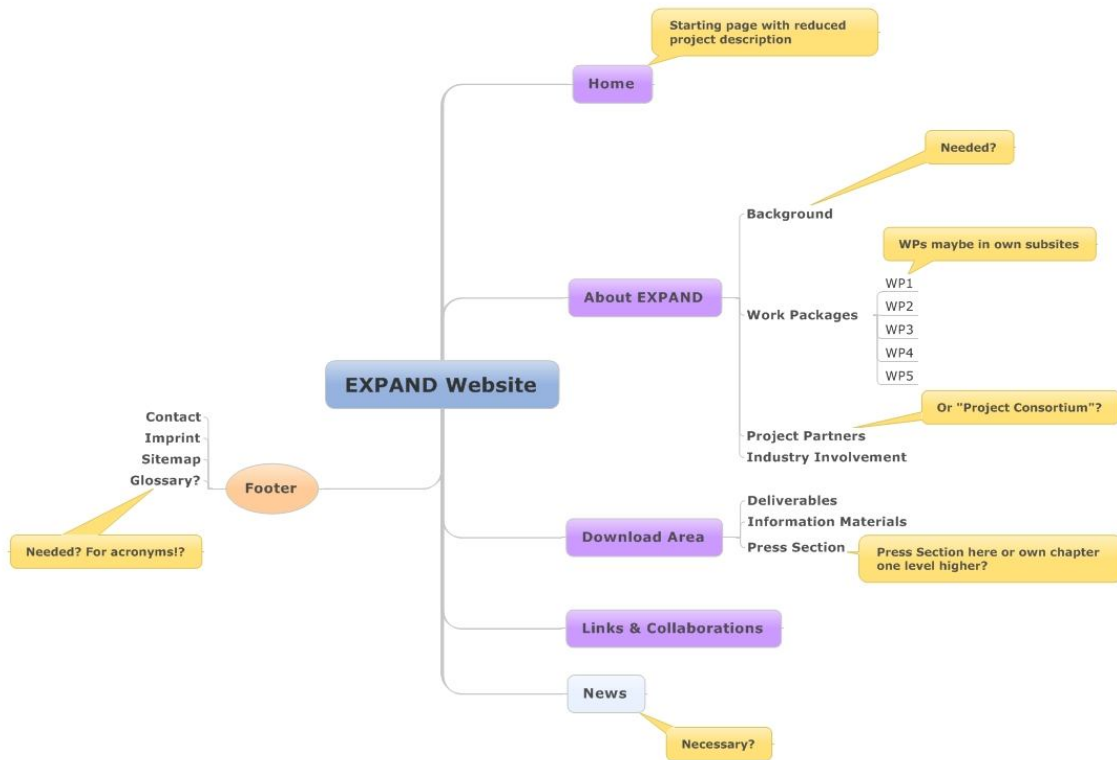

Figure 1 - Structure of EXPAND Website discussed before v2

The list of topics discussed on the website structure and design with the decisions taken in relation to them can be found below.

1. **Background:** Is the background section needed? The decision was taken to keep the Background section as proposed by WPL2 but to shorten the text.
2. **WPs:** Should there be own subsites for each Work Package? It was decided to have all the Work Packages explained on one page in order to avoid ending up with too many sub-levels which could cause confusion.
3. **Press Section:** Should the Press Section be kept as a sub-page of the Download Area or as own page one level higher? The EXPAND Press Section has been moved to the highest website level in the menu.
4. **News:** Is a news section needed? WP2 and the different experts decided to abstain from having a separate News Section on the EXPAND website. Project news shall be communicated over the EXPAND Twitter channel, through Press Releases and different articles.
5. **Glossary:** The footer should contain links to 1) a Contact form, 2) an Imprint section, 3) the sitemap and maybe 4) a glossary. If technically possible, a glossary should be used on the EXPAND website in order to avoid explaining the acronyms and abbreviations on every site again and again.

Comment: The website footer had not been finalized by the time of the deliverable creation (contact form, sitemap and glossary are still missing).

6. **Industry Team Involvement:** In a first stage only a notification on a separate page of the EXPAND website shall be created stating that the formation of the industry team is still under development and that further information will be made available as soon as the details have been clarified and the process has been completed. However, in mid of April the project team has provided interested industry companies or members with the possibility to engage in the project by filling out a contact form that can be found on the Industry Involvement page of the EXPAND website (direct link [here](#)) and by sending it completed to expandindustry@spms.min-saude.pt.

The different comments and ideas from the above described discussions were incorporated by WPL2 and the revision phase for the website version 2 was finalized at the end of February 2014. It took approximately one week to enter the approved content into the CMS of the EXPAND backend. Some basic design elements were added by WPL2 where possible. On 6th of March 2014 WPL2 handed the website with the finalized content back to SPMS for further adaptation of the design (e.g. designed menu, footer, etc.). In the screenshot below version 2 of the EXPAND website with the approved content can be seen. In this second version the design work has not been completed.

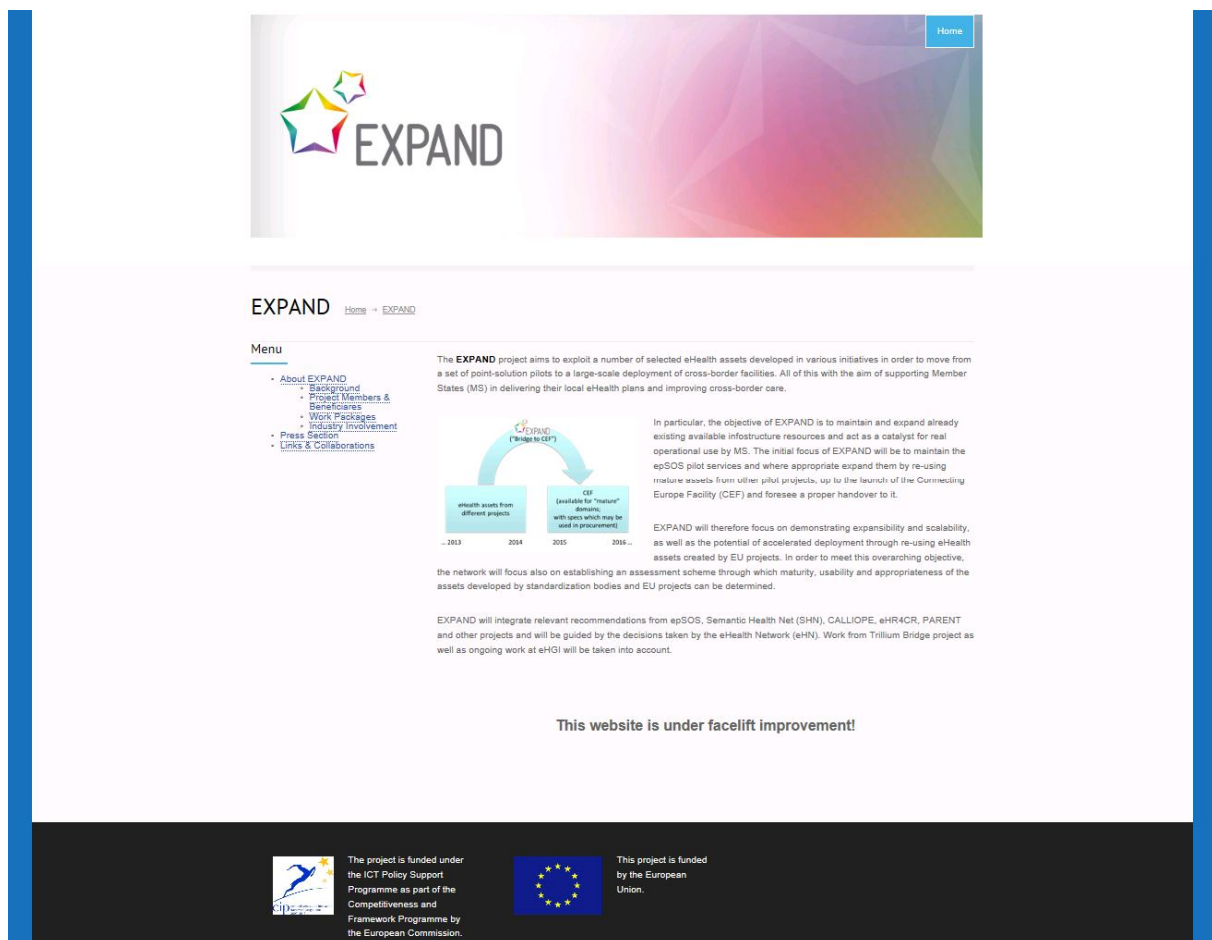

Figure 2 - Screenshot 2nd version of EXPAND website (available since March 2014)

3.3. Version 3 of the EXPAND website

Version 3 is supposed to be the final version of the EXPAND website regarding the structure and design. At the time of delivering this Deliverable, the EXPAND website is in a face-lifting process in order to be more appealing and dynamic. This document will be updated when the design of version 3 will be completed, which will follow after the launch of WP5.

Content updates will be performed where appropriate. This applies especially to the following sections.

- The Press Section where Press Releases and EXPAND articles published in different journals, magazines or newsletters (in English) should be stored and made available to the public. Such activities are also to be entered into the dissemination activities file on Projectplace (see under **Erro! A origem da referência não foi encontrada.**). Furthermore, the press section offers the EXPAND flyer and the project logo for download.
- The Download Area: In the Download Area approved deliverables should be made available to the broad public.

Also, a revision of the static website parts should take place at least once a year.

The history of alteration is summarized in the following graphic.

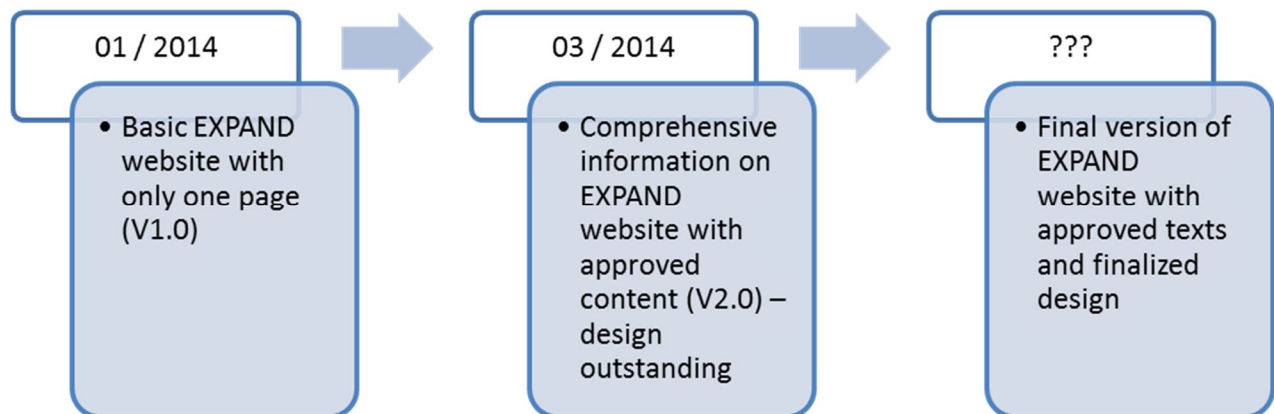

Figure 3 - History of alteration

4. Final structure of the EXPAND website

In the end the EXPAND website is supposed to provide the subsequent content and shall follow the approved structure from beneath when reaching version 3.

Figure 4 - Final structure of EXPAND website

The technical possibility of having a glossary that shows the long version of the abbreviation or acronym when scrolling over with the mouse cursor (as on epSOS website) was at the time of the deliverable creation still under investigation by SPMS.

Also, the contact form and sitemap were still under development at that time.

Until the elaboration of this deliverable in May 2014 no other EXPAND Deliverable was available to be uploaded on the website for public availability in the Download Area. For this reason the Download Area will be published as soon as material is ready. The Press Release covering the project start and the EXPAND flyer have already been uploaded to the Press Section. They are available from there since February 2014 and April 2014.

5. Maintenance and monitoring

As already described in the first chapter WP2, consisting of its members and lead by the Austrian Ministry of Health, is responsible for the content provision on the EXPAND website and updates in this regard. Once a year the static content parts shall be reviewed by the Work Package. The other website parts are of course subject to permanent review and updates (e.g. Download Area or Press Section).

WP1, on the other hand, is responsible for the technical maintenance and the design of the EXPAND website. In case of a malfunction the responsible WP1 member shall locate and eradicate the fault to ensure accessibility to the website.

The yearly Dissemination Activity Reports D2.2 and D2.3 shall also include a website visits and visitors analysis in order to monitor the trend and usage.

ANNEX 1 Screenshots from EXPAND website version 2

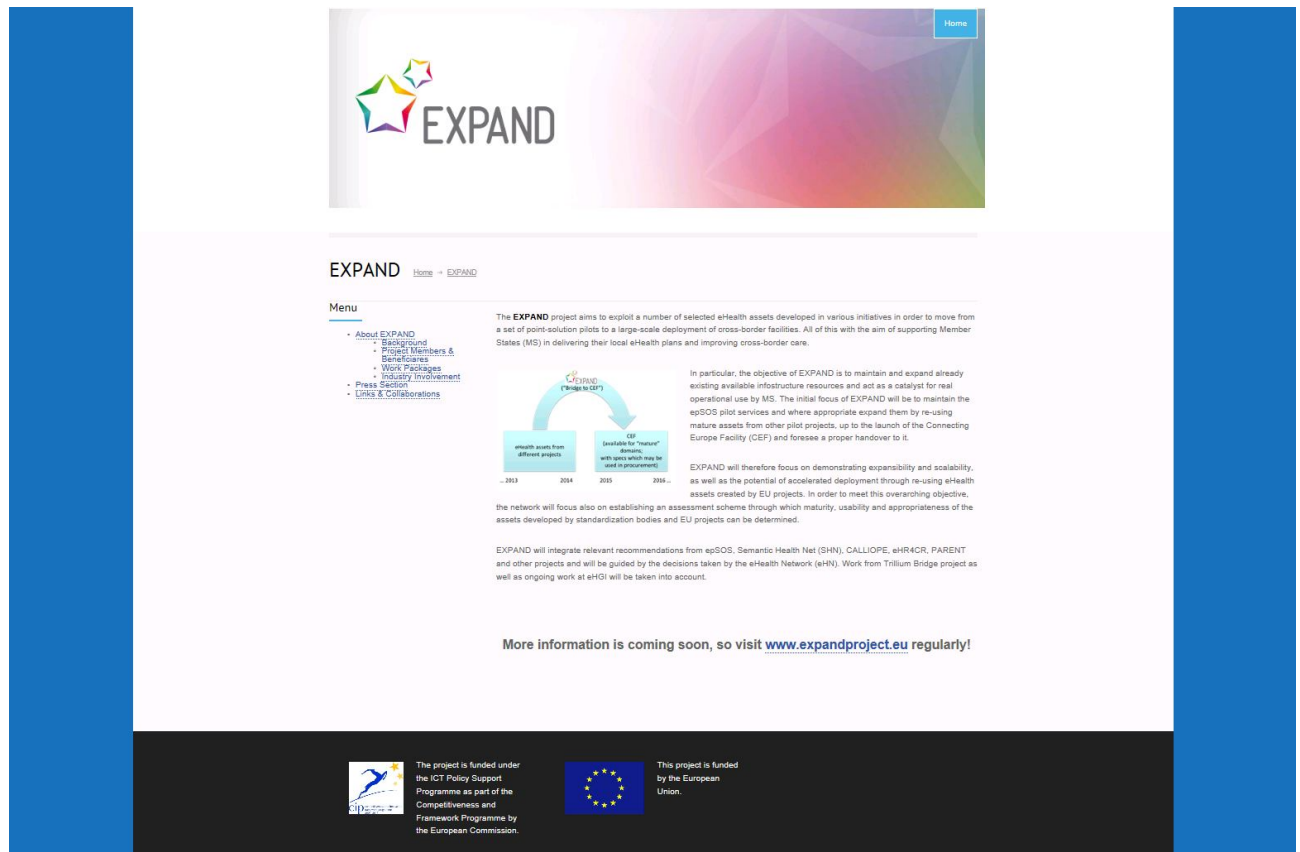

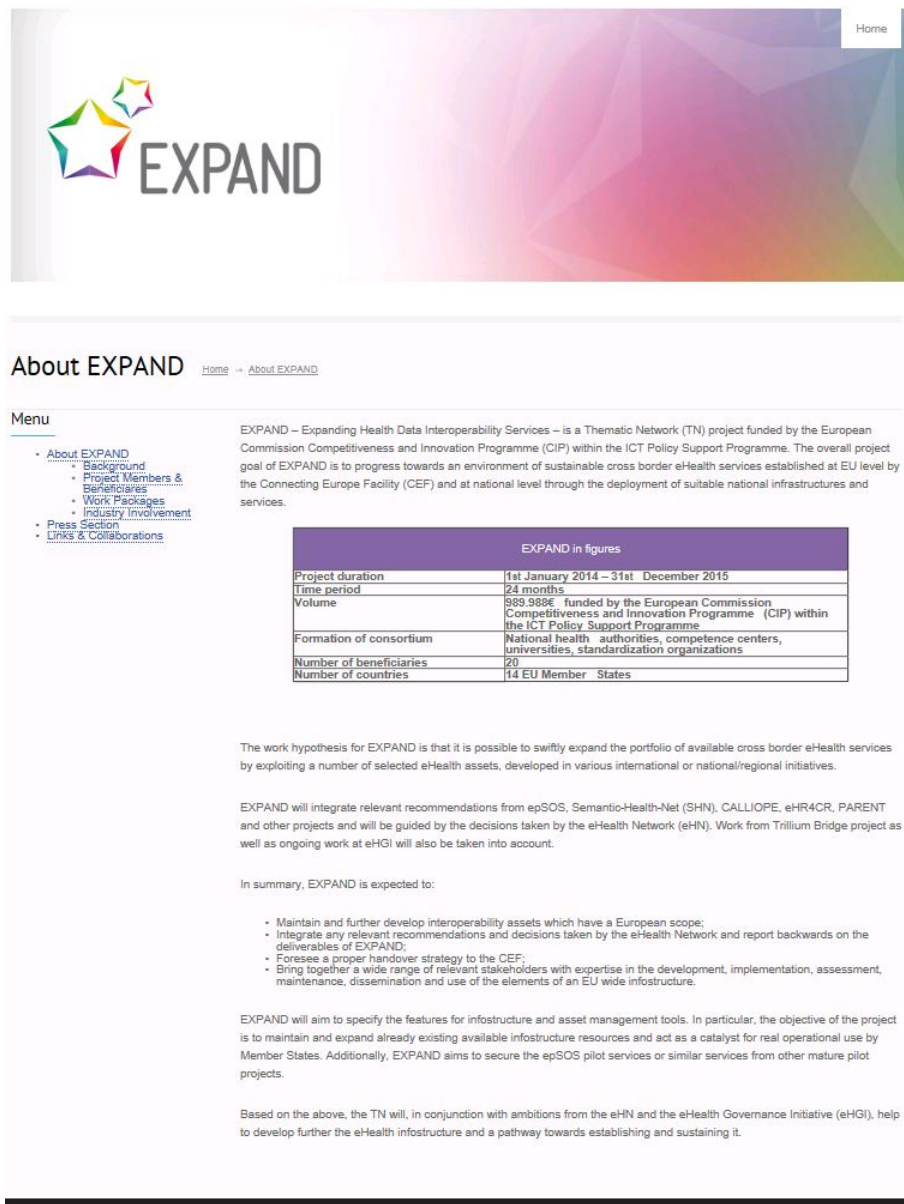

Figure 5 – Welcome page

In order to better display the website design in this Deliverable, the footer with the EC logos and the side parts (blue elements) are not part of the following screenshots. However, both can be seen in the first screenshot and the full sites can of course be viewed under www.expandproject.eu.

The screenshot shows the 'About EXPAND' page. At the top left is the EXPAND logo. The main heading is 'About EXPAND' with a breadcrumb trail 'Home → About EXPAND'. A 'Menu' section on the left lists: About EXPAND, Background, Project Members & Beneficiaries, Work Packages, Industry Involvement, Press Section, and Links & Collaborations. The main content area starts with a paragraph describing EXPAND as a Thematic Network (TN) project funded by the European Commission. Below this is a table titled 'EXPAND in figures' with the following data:

EXPAND in figures	
Project duration	1st January 2014 – 31st December 2015
Time period	24 months
Volume	989 389€ funded by the European Commission Competitiveness and Innovation Programme (CIP) within the ICT Policy Support Programme
Formation of consortium	National health authorities, competence centers, universities, standardization organizations
Number of beneficiaries	20
Number of countries	14 EU Member States

Following the table, there are three paragraphs of text: one about the work hypothesis, one about project integration, and one summarizing expectations. A bulleted list follows, detailing the project's goals. The final paragraph states the project's aim to specify features for infrastructure and asset management tools.

The EU has been funding through its CIP/PSP, Public Health and FP7 programmes a large number of projects which aim to address particular challenges of sharing health information across the Member States (MS), the health professionals and other stakeholders. Despite the successful development of such projects, experience shows that the passage from research projects to pilots and from pilots to deployment has several challenges such as: appraisal of projects' results; building trust in outcomes and capacities for their continued maintenance and support; and interdependencies across MS priorities.

Exploitation of eHealth assets from different projects and initiatives

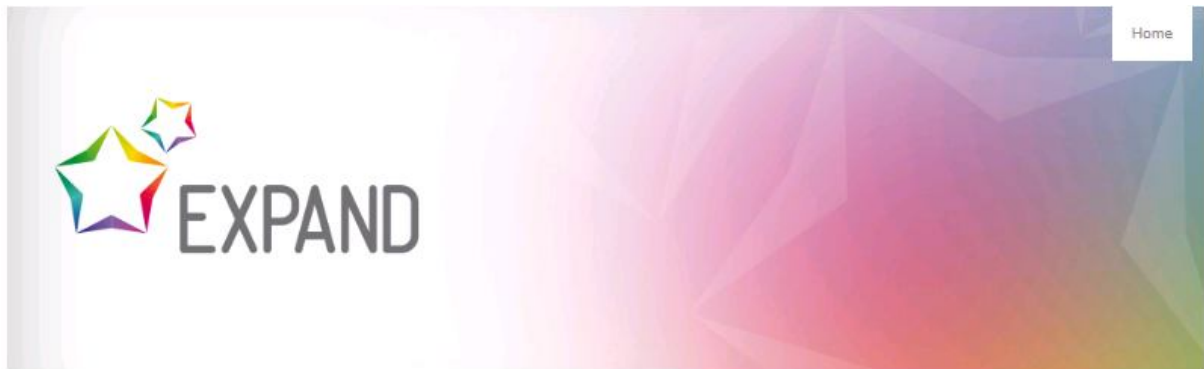

EXPAND is defined by means of a number of key words, delimiting its scope: the project is about *interoperable, cross border, EU, eHealth services* based on the legal basis provided by the "Patient Rights Directive" relating to their access to *planned care abroad*. It will not only maintain, update and upraise epSOS assets and prepare them for their hand over to CEF, but will go beyond by exploiting opportunities and assets produced in other projects and initiatives.

Directive 2011/24/EU aims to provide certainty with respect to the rights of European citizens to cross border care by establishing rules for facilitating access to safe and high-quality cross-border healthcare in the Union.

Furthermore, EXPAND will integrate experience from SemanticHealthNet, e-SENS and the other projects that it will engage in collaboration with. It will also continue to provide guidance for the associated national implementations. In order to address the expandability challenge, EXPAND will initiate at the start of the project – and maintain throughout its duration – a close working relationship with relevant projects and stakeholders.

Please visit the "Links & Collaborations" sub-site for further information on the different projects and initiatives.

In order to achieve its objectives, EXPAND currently brings together 20 national and regional health authorities and competence centres for semantic interoperability, Standards Developing Organizations (SDO), and a number of EU-supported initiatives such as EuroRec and the EN13608 Association. The Thematic Network (TN) will try, within limited resources, to consult with a wide range of relevant stakeholders with expertise in the development, implementation, assessment, maintenance, dissemination and use of the elements of an EU wide infrastructure.

Figure 8 - Project Members & Beneficiaries page

The screenshot shows the 'Work Packages' page of the EXPAND website. At the top, there is a navigation bar with a 'Home' link. Below the navigation bar is a large banner featuring the EXPAND logo and a colorful geometric background. The main content area is titled 'Work Packages' and includes a breadcrumb trail: 'Home > Work Packages'. A 'Menu' section on the left lists various site sections: 'About EXPAND', 'Background', 'Pilot/Trial/Implementers & Beneficiaries', 'Work Packages', 'Industry Involvement', 'Press', 'Contact Us', and 'Links & Collaborations'. The main text describes the project's division into five Work Packages (WPs) and provides detailed information for each:

- Work Package 1 – Project Coordination:** Focuses on establishing the Thematic Network's (TN's) governance, overall coordination, and supervision of network activities. Objectives include reporting to the European Commission, efficient administrative management, timely follow-up, stakeholder engagement, and organizing meetings.
- Work Package 2 – Dissemination:** Aims to promote the importance and value of interoperability of e-Health solutions to users and main profiteers.
- Work Package 3 – e-Health Interoperability Assets:** Focuses on establishing a common vision and conducting a 'shopping basket' exercise to identify interoperability assets.
- Work Package 4 – Assessment model:** Aims to establish evidenced and accepted criteria for the inclusion of interoperability resources within a future European infrastructure.
- Work Package 5 – Moving to CEF:** Aims to provide the move from working examples to generally usable and applicable assets in the shape of an interoperability assets information repository.
