1. Executive summary

This document *D7.4 Final plan for the dissemination and use of project results* provides an overview of the plan for the dissemination and use of ('Digitising Contemporary Art') project results. This is a plan created at the final phase of the project and explains the rationale behind the chosen strategies and communication tools for the post-project period.

This dissemination plan is a follow-up of the *D7.1 Dissemination plan*, which was created at the initial phase of the project and described the plan and strategies for dissemination activities to be carried out during the project's lifetime.

2. Introduction

This document *D7.4 Final plan for the dissemination and use of project results*

- identifies the target groups interested in the DCA project experience and results;
- describes measures to be taken in the post-project period to ensure the greatest possible awareness of the DCA project objectives and results within these target groups;
- identifies a schedule for post-project dissemination;
- lists different opportunities and methods to be taken or implemented, including dissemination tools such as a project website, online publication of the project deliverables in the form of a living document and other dissemination steps taken by the project coordinator and other consortium partners.

The scope of actions has been evaluated in terms of effective dissemination channels and tools to create a broad awareness amongst different target groups, while taking into account the available human, time and financial resources of the DCA project.

Following the general dissemination strategy of the project, the strategy described in this *D7.4 Final plan for the dissemination and use of project results* implies involving multipliers and other beneficiaries within the different communities that will spread the information received to a wider user group.

The plan also gives an insight into the individual post-project dissemination activities planned by the project partners, lists the up-coming post-project dissemination opportunities (a list of conferences, seminars and workshops at which the DCA could be represented) and gives a visual insight into current work-in-progress regarding the design of the DCA wiki.

3. Objectives of the work

3.1. Objectives of post-project dissemination activities

As the result of the 30-month work completed by the DCA project a very extensive amount of contemporary art objects and contextual documents have been digitised and made available to public via *Europeana* and the partners' own online collection presentation platforms. During this process significant experience has been gained both by individual project partners and the consortium team together.

Taking into account that this is the first and largest European project specifically dedicated to the digitisation of contemporary art, it is very important to raise public awareness of the newly digitised collections available since this content has been highly underrepresented in the *Europeana* portal. It is also very important to share the professional knowledge and experience acquired throughout the project in order to allow other stakeholders to benefit from it.

The overall objectives of the DCA post-project dissemination activities are in line with the general project dissemination objectives of the project:

- to create awareness about online access to contemporary art from countries all over Europe via *Europeana*;
- to enhance visibility and raise attention towards the collections of content providers;
- to share the knowledge and experience gained, encouraging other institutions working with contemporary art to put their collections online and to use the best practice guidelines developed by the DCA project;
- to enhance discussion and expertise on relevant issues such as digitisation, aggregation, digital archiving, cataloguing etc., amongst professional contemporary art networks.

3.2. Target audience groups of post-project dissemination activities

In the *D7.1 Dissemination plan* seven target audience groups were defined:

- general public;
- mediators between the general public and artists and their work;
- users in the educational field;
- users in the research field;
- professionals in the arts field;
- users from tourism, IT technology, creative industrial or communication design and marketing;
- policy makers, *Europeana* & related projects, ICT PSP environment etc.¹

¹ For further details, please check http://www.dca-project.eu/images/uploads/varia/DCA_D71_DisseminationPlan_20110331.pdf

According to their needs and interests, these target groups can be divided into three categories:

- groups interested mainly in accessing contemporary art reproductions;
- groups interested both in reproductions and more detailed information on the very process of digitisation;
- groups interested in the general project management and its socio-economic impact.

The final dissemination strategy and diverse content of the post-project dissemination tools is created by taking into account the needs and interests of these target groups.

3.3. The scope of action of post-project dissemination activities

Continuing the praxis of the DCA project implemented so far, there will be three main fields of action:

- the use of promotional tools and materials;
- the use of communication channels;
- specific opportunities for dissemination activities.

3.3.1. The use of promotional tools and materials

The main promotional materials for the post-project phase will be the project's website (<http://www.dca-project.eu/>) which will be kept running by the project coordinator PACKED VZW.

In order to share the professional knowledge in a more effective and user-friendly way than just publishing project deliverables as downloadable PDF documents, the DCA project management board has taken the initiative of creating a living document on contemporary art digitisation guidelines: the DCA wiki. The wiki is being constructed as part of the currently existing project website, but has its own front page. This allows the DCA wiki to become the main interface of the DCA project after the project's end. Publishing the digitisation guidelines in the form of a living document will also offer a possibility for updating and editing information in a situation of rapid technological development, as well as creating a platform for discussion among professionals that is one of the dissemination objectives of this project. (Please find more detailed information on the DCA wiki in section 4. *Dissemination tools and materials*)

One of the key dissemination activities carried out by project partners during the project's lifetime has been the presentation of the project to various audiences, from general presentation for peer audiences to lectures for university students and more specific presentations in professional conferences. In order to help the project partners continue this very useful activity the ready-to-use DCA PowerPoint presentation created in M3 will be updated with new information following the project's end, so that it reflects all major project results. (Please check *D7.3. Presentation software template and ready-to-use presentations*).

3.3.2. The use of communication channels

The following communication channels will be used in the post-project phase:

- international, national and regional mass media (printed press, radio, TV, internet portals, social networks);
- professionally orientated networks (such as associations of museum professionals, librarians, art teachers, *Europeana pro* and similar);
- online platforms of partners (websites of the partners and national aggregators, Facebook, Twitter and Vimeo accounts, electronic newsletters, etc.);
- the *Europeana* portal that offers dissemination opportunities, such as exhibitions of newly added collections.

3.3.3. Specific opportunities for dissemination activities

As the current experience of the DCA project has proved, there exist a great variety of special dissemination activities that can be implemented to increase awareness of project results.

These specific dissemination activities range from conference talks to lectures organised by other professional networks or educational institutions, panel sessions, discussions online and real life exhibition activities organised by partners. One can also not underestimate the power of face-to-face dissemination to professionals in the field of culture, arts, education and politics.

All these activities will be encouraged among the project partners in the post-project phase, and will hopefully increase in scope, as the digitised content is now available online and provides a very visible project result for sharing.

To enhance the partner dissemination activities a list of upcoming events for dissemination is to be distributed among the partners at the end of the project (please see *Appendix 7 - List of upcoming events for dissemination*) along with the updated DCA ready-to-use PowerPoint presentation following a successful review of the project in September or October 2013 (For further details, see section 3.3.1. *The use of promotional tools and materials*).

For more detailed post-project dissemination plans of consortium partners, please see *Appendix 6 – List of planned dissemination activities: DCA consortium partners*.

4. Dissemination tools and materials

There will be three main dissemination tools for post-project dissemination:

- the DCA wiki;
- the DCA website (for further details, please see section 3.3.1. *The use of promotional tools and materials*);
- the ready-to-use PowerPoint presentation (for further details, please see section 3.3.1. *The use of promotional tools and materials*);

4.1. The DCA wiki

The DCA wiki will become the main DCA interface online after the project's end.

There are several documents that have been produced in the framework of the DCA from which other stakeholders might benefit. As one of the tasks of the project was to share this knowledge in an online publication, the PMB has decided that the best possible way to do so would be by creating a living document, a DCA wiki.

Taking into account the rapid technological development and growing experiences in the field of art digitisation, this approach offers several advantages:

- the information can be revised and updated according to the latest developments in the field of digitisation;
- it can bring together professionals of the field and create a place for discussions, questions and answers.

This way the results of the DCA project will have an impact beyond the project's lifetime and the guidelines published will hopefully retain their actuality for a longer period.

4.1.1. *The target users*

The DCA wiki is intended for professionals already working on or considering the digitisation of a contemporary art collection, so there are three groups of target users that can be described as:

Group A – beginners: these are users that may not be familiar with specific technical issues and may have little or no experience in creating and maintaining an electronic database systems, but are looking for general guidelines and experience in the digitisation of contemporary art.

Group B - experienced users: these are users that are not necessarily digitisation experts, but are already in the process of digitisation and looking for answers to more specific questions or additional information.

Group C – experts: these are professionals with significant background and experience in the digitisation of contemporary art, preservation and maintenance issues, are willing to discuss certain aspects of digitisation with other experts of the same level, and able to share their experience for public benefit.

4.1.2. The wiki content

The content of the wiki will be created taking into account the needs of all three potential user groups, so that the information provided will be detailed enough to satisfy experienced professionals and explained clearly enough to be useful for beginners.

The core information available on the DCA wiki will be based on several deliverables created by the DCA work package leaders. The original text will be reshaped according to the wiki needs and restructured to suit as an online guide for all major digitisation issues starting with the planning phase and ending with data preservation and public access.

The deliverables that form the base of the DCA wiki are:

- *D4.2 Guidelines for an A-Z digitisation workflow for contemporary artworks;*
- *D3.1 Metadata implementation guidelines for digitised contemporary artworks;*
- *D3.2 Recommendation on contextualisation and interlinking digitised contemporary artworks;*
- *D5.4 Semantic dissemination to Europeana (summarised);*
- *D6.1 Guidelines for a long-term preservation strategy for digital reproductions and metadata;*
- *D6.2 Best practices for a digital storage infrastructure for the long-term preservation of digital files.*

The information from the deliverables will be supplemented and linked with images, case studies, interviews, artwork representation on *Europeana* and other relevant external information where appropriate.

Hyperlinks will be used to interconnect related topics inside the wiki.

The wiki will also offer an extensive glossary of terms related to the digitisation of contemporary art.

4.1.3. The wiki structure

The DCA wiki will be hosted on the PACKED vzw server and created as part of the DCA website by forming a new tab within it with a clear reference from the DCA home page.

Once the user clicks on this reference/ tab, (s)he will be taken to the DCA wiki front page with an attractive design that offers a short introductory text about the wiki and its possibilities (in all national languages of the DCA content partners), a search field and a log in/ registration field (For more details on accessibility, please see below.)

The main page functions as a general table of contents in which all information originally available in project deliverables is categorised into three chapters:

- digitisation workflow;
- metadata practices;
- long-term preservation.

(For further information, see *Appendix 1 – Wiki: Main page*)

The main page also provides access to a glossary that includes explanations on all major technical terms used in the wiki.

(For further information, see *Appendix 2 – Wiki: Glossary*)

Each of the three main chapters will open as a new wiki page comprising:

- a summary;
- a hypertext published by DCA, including visuals as well as changes made by registered users (if accepted by the editor);
- a reference section.

(For further information, see *Appendix 3 – Wiki: Main chapter*)

Each new wiki page (under the three main chapters) will comprise:

- a summary;
- a wiki text;
- a footnote section;
- a section for links to further information;
- a discussion field, in which registered users can add their comments and suggestions on improvement or updates of the particular page as well as initiate a discussion.

(For further information, see *Appendix 4 – Wiki: Page*)

4.1.4. Possibilities offered

The DCA wiki can be used as an online 'guide book' that starts with the introduction and ends with the glossary.

At the same time wiki offers hyperlinks that make it easy to navigate between related topics and find specific information the particular user is looking for.

In order to follow the latest developments in particular wiki pages, a registered user can add a page to a watchlist and enable email notification on changes.

4.1.5. Design

As it is part of the DCA website, the design of the wiki will be created in line with the overall DCA corporate design. The special front page and main pages will look more distinguished, as they will serve as a gateway to the contents of the wiki.

4.1.6. Access and editing

All information on the wiki will be available for viewing without registration. However, contribution and participation in discussions will require registration that is to be granted by the administrator. If an unwanted change is made, the administrator will be able to do a roll-back to an earlier version. The DCA wiki will be maintained and administered by PACKED vzw, DCA's Project Coordinator.

In order to help registered users with editing the wiki content, a concise Help section will be created that offers the basic guidelines in editing and formatting the DCA wiki.

(For further information, see *Appendix 5 – Wiki: Help section*)

4.1.7. Contributors

The core text of the wiki will be published by the administrator (i.e., the authors of the deliverables included, the Dissemination Officer and Project Coordinator Packed vzw). However, selected experts will be specially invited to join the DCA wiki community to comment, review and update the published information when/if necessary. Other stakeholders/ contributors are expected to join the wiki community gradually and to take an active part in developing its content.

4.2 The DCA website

This website provides all the basic information about the DCA project and its partners, as well as giving more detailed information on the project experience through articles, interviews and case studies done throughout the project's lifetime. The website also offers a possibility to download all public deliverables and to contact the project team via the contact form.

4.3. The ready-to-use DCA PowerPoint presentation

The ready-to-use DCA PowerPoint presentation that was created in M3 will be updated with new information following the project's end, so that it reflects all major project results.

5. Dissemination plan and strategy.

The dissemination strategy for the post-project phase will include two major fields of action:

- dissemination of all project results;
- particular dissemination of the DCA wiki.

In order to implement the strategy several steps will be taken:

- 1) The living document, the DCA wiki, will be created (planned for publication in mid September 2013).
- 2) Short introduction text for the wiki (introduction part of the front page) will be prepared by the dissemination Officer and the Project Coordinator and translated by the partners in national languages (2 - 9 September, 2013).
- 3) Invitation text to use the wiki and join the DCA wiki community with basic information on the DCA project; intended for professional institutions, networks and individual experts working in the field, prepared by the Dissemination Officer and the Project Coordinator and spread among the partners for translation into national languages (2 September, 2013).
- 4) Invitation text to use the wiki spread among international professional institutions and networks by the Dissemination Officer and to national professional networks/ institutions and individuals by partners (following a successful launch of the DCA wiki).
- 5) Invitation text to use the wiki published on partners' digital platforms and social network profiles providing a link to wiki (following a successful launch of the DCA wiki).
- 6) The DCA project information on partners' websites supplemented with relevant information and link to the DCA wiki (following a successful launch of the wiki).
- 7) An online exhibition of the DCA content on the *Europeana* portal, organised and promoted by Project Coordinator PACKED vzw.
- 8) Final press release informing about all project results, including publication of the wiki, will be prepared (general version, English, with images) and distributed via the central mailing list (following a successful review meeting; September - October 2013, exact date to be announced)
- 9) Final press release translated into national languages, supplemented with local content / images and distributed by partners via their mailing lists, websites and social networks (following a successful review meeting; September - October 2013, exact date – the same as for distribution of the general version).

All partners of the DCA project are responsible for disseminating the project. This was agreed upon in the grant agreement and partners were reminded at several consortium meetings during the project.

6. Expected results

The expected results of the activities foreseen in the final plan for dissemination are as follows:

- increased awareness, in particular among the general public, professionals and students, of contemporary art on the *Europeana* portal and the online access to contemporary art from countries all over Europe;
- knowledge shared with professionals in the field of art digitisation;
- enhanced discussion and expertise on digitisation, aggregation, digital archiving, cataloguing, etc., within the contemporary art community.

Glossary

AIP – Archival Information Package – A package designated for a digital archive, which includes not only digital content information but also preservation description information area such as a home, school, computer laboratory, or office building using network media.

DCA – Digitising Contemporary Art

DIP – Dissemination Information Package – The AIP becomes a DIP when the end-user or consumer requests a package's content information drives will typically be nominated with a letter followed by colon, such as C: or similar.

DROID – Digital Record Object Identification – Tool for verifying files and their format energy, as soon as the disks are not actively accessed.

HDD – Hard Disk Drive

I/O – Input/output

ISO – International Organization for Standardization

JBoD - Just a Bunch of Disks, see more in chapter 4.3 - **edit this!**

JHOVE – Jstor/Harvard Object Validation Environment – Tool for verifying files and making metadata.

LAN - Local Area Network is a computer network that interconnects computers in a limited area such as a home, school, computer laboratory, or office building using network media.

LTO – **Linear Tape Open (Archival tape)**

MAID - Massive Array of Idle Disks, storage technology like RAID, but with energy management. Instead of the HDD being constantly on, the MAID turns them off to save

MARC – Machine-Readable Cataloguing – Metadata standard

Appendix 3 - Wiki: Main chapter

- Top navigation:** IP address 91.183.104.34, a link to 'Talk for this IP address', and links for 'Log in / create account'.
- Page tabs:** 'Page Discussion', 'Read', 'View source', and 'View history'. There is also a search box with 'Go' and 'Search' buttons.
- Left sidebar:**
 - Logo: 'digitising contemporary art'.
 - Navigation links: 'Main page', 'Community portal', 'Current events', 'Recent changes', 'Random page', 'Help'.
 - Toolbox: 'What links here', 'Related changes', 'Special pages', 'Printable version', 'Permanent link'.
- Main content area:**
 - Section Header:** 'Guidelines for long term preservation strategy'.
 - Section Header:** 'Summary'.
 - Text:** 'These Guidelines for a long-term preservation strategy for digital reproductions and metadata explains how to preserve digital materials such as text, images and video. It gives a theoretical introduction to the subject as well as practical examples of how to manage a collection of digitised and born-digital artworks. Every institution with a digital repository should have a policy and plan to ensure access to content, not only today but also in the future. If digital preservation is not taken into account, the risk of loosing or changing data will become inevitable. Preservation should therefore be a part of digital collection management.'
 - Section Header:** 'Contents'.
 - Table of Contents:**
 - Definitions of digital preservation
 - Trustworthy repositories and file authenticity
 - Standardisation model OAIS
 - How to get started
 - Bit preservation and logical preservation
 - Introduction to recommended file formats and containers
 - Methods for preservation
 - Preservation planning
 - Preservation metadata
 - Checksums
 - Persistent identifiers
 - Section Header:** 'External links'.
 - External Links:**

Definitions of digital preservation

In order to avoid confusion, we will apply the following definitions (which we have created ourselves, unless otherwise stated), throughout the guidelines.

- 1. Long-term preservation:** 'Long-term' implicitly means as long as possible, not just ten- twenty years, but hundreds of years. When creating a long-term strategy, it is thought to be a changing and developing procedure, which has to be constantly renewed. As we can't predict the future, a strategy made in 2000 will have to be adjusted along the way and will probably be different in 2012, so when using the expression long-term it does not refer to a permanent solution. Often a timespan of two generations is used to determine if a strategy is long-term. The first generation still has a direct link with the creators of the data (which might help them to access it); the second generation does not. If the necessary measures are taken to make sure that this second generation can still access the data, chances increase that it will survive long-term – especially if each generation approaches the preservation of data in the same way.
- 2. Digital content:** The digital content that an institution might have will be referred to as repositories, archives or collections. The digital content regards all digital files an institution uses, administrates or distributes, both digitised and born-digital. In these Guidelines it stands for everything from audio-visual content to images and text documents. Digital content can also refer to more complex data such as software and net-based art. Since software and net-based art are not part of the scope of the DCA project, we will not be discussing them here ^[note 1]. The digital components will be called digital objects, items, files or data.
- 3. Digital Object:** A digital object is defined by the National Library of New Zealand (NLNZ)^[1] as being: A single file (such as a text document); Several connected files (such as a database or a website); A collection of independent files that are kept together (such as emails or blog posts). !!! In these Guidelines we will only talk about single and connected files as digital objects, as they are the most relevant.
- 4. Preservation method:** a theoretical description of how to preserve digital content in a specific repository. In order to preserve readability and accessibility of the given content, appropriate methods must be chosen, e.g., migration to a specific (new) format every five years, and this in consideration of budget and available technical expertise.
- 5. Preservation planning:** a documented policy that should be created for any institute with digital repositories; it includes preservation methods, file formats, and strategy for future actions. The plan should also describe the procedures, equipment, and software needed while keeping data accessible but also authentic in terms of the original intent.
- 6. Open standard and open source:** These terms will often be used when addressing file formats and codecs. The difference is that an open standard is an openly described file/container or other where the technical specifications have been described in detail, often by a big organisation such as the ISO (International Organization of Standards). The standard can be freely used, but not altered. An open source format or software is freely available for anyone to build on, use and alter according to their needs. This means that it is available to all in terms of use and openness, but there can be a license fee. Open source is usually not regarded as a standard in itself, but it stands for the idea that the technicalities should be described and open to anyone, without any patents or proprietary properties. Open source software is often distributed with so-called open licenses, such as creative commons or a General Public License (GNU).

Appendix 6 - List of planned dissemination activities: DCA consortium partners

ACTIVITY	PRESENTER	TIME/PLACE	TITLE OF EVENT	DESCRIPTION	TARGET AUDIENCE
DCA website	PACKED	July 2013 onwards	DCA website maintenance	Packed vzw will keep the project website alive after the end of the project. It will give an overview of the project as a whole, the results achieved, the materials produced. Next to that a wiki will be created in order to present the helpful information on digitisation, metadata practices, long term preservation and online presentation.	Professionals from culture/ heritage institutions, IT specialists
DCA wiki	PACKED	July 2013 onwards, publication of the DCA wiki is scheduled for September 2013	DCA wiki development and administration	Wiki will be hosted on a PACKED server and will also be kept alive after the end of the project by PACKED. If interesting/relevant information can be added to the wiki after the end of the project, the PACKED-team will investigate if and how this can be done. As a wiki is an environment that calls for interactivity, PACKED will moderate suggestion for input and improvement made by the future wiki users. If needed, specific questions will be redirected to the pertaining WP leaders or relevant project partners.	Professionals from culture/ heritage institutions, IT specialists
DCA wiki	LCCA	July 2013 - September 2013	DCA wiki development	LCCA is organising the development, publication and dissemination of the DCA wiki	Professionals from culture/ heritage institutions, IT specialists
DCA wiki – text input	LIMA, MRBAB, iMinds, LCCA, PACKED	July 2013 - September 2013	DCA wiki – text input	The authors of the deliverables incorporated in the wiki will work on the text input in collaboration with the Dissemination Officer, IT specialist and editors from PACKED vzw.	Professionals from culture/ heritage institutions, IT specialists
Wiki introduction text	PACKED/ LCCA/ ALL PARTNERS	August – September 2013	DCA wiki: Introduction	Short introduction text about the DCA wiki to be included in the wiki introduction page – translated to all national languages.	Professionals from culture/ heritage institutions, IT specialists
Wiki – invitation text	PACKED/ LCCA/ ALL PARTNERS	August – September 2013; distribution following the publication of the wiki (September 2013)	Wiki – invitation text	LCCA/ PACKED will prepare an invitation text to use the DCA wiki that will be spread among international networks and organisation of potential stakeholders by the Dissemination Officer. The text will be translated to national languages and spread among potential stakeholders (organisations and individuals) in national level by partners.	Professionals from the field of digitisation and art / culture/ heritage institutions (individuals, organisations, networks)
Links to DCA wiki from the partner websites	ALL PARTNERS	Simultaneously with the publication of DCA wiki (September 2013)	Links to DCA wiki from the partner websites	All partners are expected to give a clear link to the DCA wiki from their websites.	Wider public
List of upcoming events for dissemination	LCCA	July 1, 2013	List of upcoming events for dissemination	List of upcoming events for dissemination prepared and distributed among consortium partners	Consortium partners

on					
Final press release	PACKED/ LCCA/ ALL PARTNERS	Following a successful round-up of the project and review meeting (October 2013)	Successful round-up of the project (working title)	The press release announcing the round-up of the DCA project and the publication of DCA wiki will be prepared by PACKED vzw and LCCA and distributed via the central mailing list. The general version of the press release will be distributed among the partners that are expected to translate it to national languages, supplement with local contents and distribute through their mailing lists as well as publish on their websites.	Media, professionals from the field of digitisation and art / culture/ heritage institutions (organisations, networks)
