

# FInest – Future Internet enabled optimisation of transport and logistics networks

# D8.4 Prototypical Implementation of Logistics Contract Manager

Project Acronym	FInest	
Project Title	Future Internet enabled optimisation of transport and logistics networks	
Project Number	285598	
Workpackage	WP8 Logistics Contract Establish	ment and Management
Lead Beneficiary	SAP	
Editor(s)	Stephan Heyne	SAP
Contributors(s)	Clarissa Marquezan	UDE
Reviewer		
	Agathe Rialland	MRTK
	René Fleishhauer	SAP
	Rod Franklin	KN
Dissemination Level	Public	
Contractual Delivery Date	31.03.2013	
Actual Delivery Date	31.03.2013	
Version	V1.0	

#### **Abstract**

This document describes the Proof of Concept (POC) Implementation of the E-Contracting Module (ECM), which is a core module from the FInest platform. The role of this module is to support the online and real-time establishment and management of T&L contracts and operation in marketplaces. This document is a technical documentation of the existing POC implementation so of the current situation but not of the full features intended for the final version.

The document contains a fact sheet which includes the list of key features, technical details about the technologies used, details about how to access the POC prototype, as well as, steps for the deployment of a new version of the ECM.

Additionally the document contains descriptions of the main screens of the proof of concept prototype which shall serve as a simple manual giving an idea about the capabilities of the prototype

#### 1 Introduction

This document describes the Proof of Concept (POC) Implementation of the E-Contracting Module (ECM), which is a core module from the FInest platform. The role of this module in this platform is to support the online and real-time establishment and management of T&L contracts.

This document is a technical documentation of the existing POC implementation so of the current situation. There are still features of the ECM module that were not implemented in this version of the POC. For this version of the prototype, we focused on the features of the ECM that build upon the GEs from the FI-WARE. These functionalities are the very basic operations of the ECM that are essential for the development of sophisticated features of the ECM, such as contract analytics.

The main screens of the ECM prototype will be described in this document. These screens are also associated with the demonstration scenario detailed in Section 5.2 of Deliverable D3.4. The ECM module support the two streams of action described in this scenario. First, it supports the identification and selection of services to be used during the planning phase of a transport and logistics service. The section 3.1 and 3.2 of this deliverable D8.4 introduce the screens of the ECM prototype associated with the actions in this first stream. Second, the ECM POC supports handling booking cancelations by identifying possible demands that match the provided service, as it is illustrated in the last screen (S08) of Section 3.2 in this document.

This document is organized as follows.

- In section 2 the fact sheet is given which shortly describes the key features, the technologies used for implementation, information required for the access of the POC prototype, as well as, steps for the deployment of a new version of the ECM.
- In section 3 each of the screens of the POC prototype is briefly described. Using those
  descriptions it should be easily possible to use the prototype and get an idea of its
  concepts and functionalities.

#### 2 Fact Sheet

Fact	Description	
Key Features	Create:	
	Transport service offers	
	Transport service Demand	
	Contracts	
	Search/list:	
	Transport service offers	
	Transport service demands	
	Own Transport service contracts	
	Own Transport service demands	
	Own offers	
Implemen-	Frontend	
tation Technologies	<ul> <li>SAP UI5 (proprietary)</li> <li>jQuery 1.6.2</li> <li>rdfQuery 1.0</li> </ul>	
	Middleware	
	<ul> <li>Spring 3.1</li> <li>Java EE 6 (esp. Servlet API 2.5)</li> </ul>	
	Backend	
	FI-WARE Service Repository GE 1.0	
	Others	
	Application Server: Apache Tomcat 7	
Access	Prototype is deployed on central server hosted by KOC and directly available on the internet. For accessing the prototype you need to "log on" as a registered user. For simplification shortcut links have been created for each user to simplify access to the prototype.	
	Example Users:	
	Arne Rost (Shipper) <a href="http://81.8.42.198:8080/sap.finest.ecm.frontend/?uid=Arne&amp;ur=Shipper">http://81.8.42.198:8080/sap.finest.ecm.frontend/?uid=Arne&amp;ur=Shipper</a>	
	Eric Farstad (Forwarder T&F) <a href="http://81.8.42.198:8080/sap.finest.ecm.frontend/?uid=Eric">http://81.8.42.198:8080/sap.finest.ecm.frontend/?uid=Eric</a>	
	Oyvind Olsen (Carrier NCL) <a href="http://81.8.42.198:8080/sap.finest.ecm.frontend/?uid=Oyvind">http://81.8.42.198:8080/sap.finest.ecm.frontend/?uid=Oyvind</a>	
	Karl Fagels (Carrier Tranvog) <a href="http://81.8.42.198:8080/sap.finest.ecm.frontend/?uid=Karl">http://81.8.42.198:8080/sap.finest.ecm.frontend/?uid=Karl</a>	

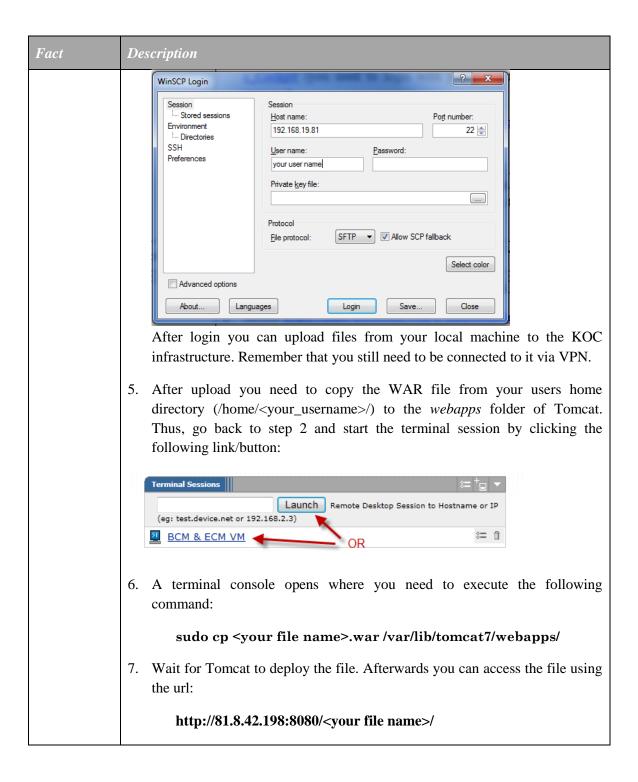

Fact	Description
	The different roles affect the areas in the application which can be accessed.  Each user can see the areas:  - Home - Public Offers - My Demands - My Contracts  In addition, only carriers and forwarders have access to the following areas: - Public Demands - My Offers  Each user can of course only see and edit his or her created data in the areas with the prefix "My". Contracts – which are not implemented so far – can only be accessed by the involved parties but nobody else.
Requirements	<ol> <li>Use of modern and standard compliant browser:         <ul> <li>Mozilla Firefox - Version 19+ (recommended)</li> <li>Google Chrome - Version 18+</li> </ul> </li> <li>Access to FI-WARE Repository running in the FI-WARE Testbed         <ul> <li>To have access to the data necessary to use the ECM Prototype you need to have access to the FI-WARE service repository where all the data is stored. FI-WARE uses a white list to allow access to it and if the tables in the "My Offers" area are empty for you, then that means that your IP address is not maintained in that white list.</li> <li>To get access execute the following steps:</li></ul></li></ol>
	c) If b) does not work you can also write an email to <a href="mailto:e.cloud10@tid.es">e.cloud10@tid.es</a> and ask for access (do not forget to give your IP address from a).

Fact	Description		
	It is important to notice that FI-WARE requires only for static IPs to be registered. This affects most of the users trying to access the ECM, because typical Internet users have their computers identified by dynamic address. This limitation imposed by FI-WARE should prevent the proper execution of the ECM prototype unless the exact steps for gaining access from FI-WARE were followed.		
	To check if you got access open the following link: <a href="http://appsnserv.lab.fi-ware.eu:8080/FiwareRepository/v1/finest/034/">http://appsnserv.lab.fi-ware.eu:8080/FiwareRepository/v1/finest/034/</a> . If you can see some XML it works, if you receive an HTTP error (most likely a 404) or if you receive a blank page, the access has not been allowed.		
Deployment	The following steps are required for deploying a new version of the ECM:  1. Pack the application as an web archive file (.WAR).		
	2. Access <a href="https://sahne.kocsistem.com.tr/dana/home/index.cgi">https://sahne.kocsistem.com.tr/dana/home/index.cgi</a> with Microsoft Internet Explorer (if you don't own an user account ask Özgür Sönmezer (ozgur.sonmezer@kocsistem.com.tr) and also ask for a network profile to use putty and WinSCP).		
	3. Start the VPN by clicking the following button. For the first time using the link, you may need to install a VPN software. If the button is pressed for the first time, the Internet Explorers install a VPN client (activation of AcitveX necessary). After the installation the client will be started in order to register the computer in the KOC network and enable the user to access the hosting machines. The installation will only take place once and afterwards the VPN client will be started automatically every time the button is pressed.		
	Client Application Sessions  Network Connect  Start		
	4. To upload your WAR file you can use WinSCP. You only need to configure the connection:		

# 3 Scenario Walk-Through

#### 3.1 Home Screen

Element	Description	
Page number	S01	
Page name	Home Screen	
Screenshot	HOME PUBLIC OFFERS PUBLIC DEMANDS MY OFFERS MY DEMANDS MY CONTRACTS  E-Contracting Module  The E-Contracting Module (ECM) is a core module of the Finest collaboration service. The role of this module is to support the online and real-time establishment and management of transport and logistics contracts, as well as operations in marketplaces.  There are 4 main characteristics that make the ECM innovative and a more robust service with capabilities related to contracting activities (establishment, negotiation, execution):  1. Explicit connection between operations in the Marketplace and the contract management.  2. With the ECM, transport and logistics planners can utilize real, precise and agreed terms of their contracts, and not on interpreted terms, to define the SLAs for execution service bookings.  3. The ECM is designed to explicitly connect to different marketplaces, and not to replace them.  4. The ECM has operations explicitly defined to conduct different types of consistencies checks between ongoing/planned transportation service versus the SLAs established in the contract.	
General Description & Screen Purpose	This page is the landing page after a user directly accesses the URL of the ECM proof-of-concept. The page gives general introduction to the user. The page also contains an overview about all users that are able to login.  From this page all areas of the ECM can be directly accessed by clicking on one of the area names at the top of the screen.	
Description of Red Labeled Elements	Label 1: In this area the user name is displayed and it is (in the future) a single point of access for user settings and help features.  Label 2: Access to Screen S02 Label 3: Access to Screen S06	

# **3.2 Screens Associated with Marketplace Offers**

Element	Description	
Page number	S02	
Page name	Search for Public Offers	
Screenshot	HOME PUBLIC OFFERS PUBLIC DEMANDS MY OFFERS MY DEMAN  Search for Public Offers  Search for transport services  Cargo dried fish Select cargo type 1 Not-hazardous cargo Temperature controlled cargo Origin 2 Alesund Destination Rotterdam  Transport mode 3 Air Sea Road Rail	
	open details of transportation  Amount  2	
General Description & Screen Purpose	When clicking on the area "Public Offers" this screen is displayed. Here it is possible to inform the basic criteria to search for service offers. Examples of criteria are: the origin and destination, the type of cargo to be transported and the mode of transportation.  Advanced filtering criteria can also be used by clicking on a button (4). Then further requirements for the transportation service can be used for the search. For instance the weight and amount to be transport, the transit time and the type of transport equipment.	
Description of Red Labeled Elements	<ul> <li>Label 1: This button enables to specify the cargo type(s) to be transported. The text box next to the button displays the current selection.</li> <li>Label 2: Here origin and destination can be specified for the search.</li> <li>Label 3: Here transport means can be specified which will be taken into account for the search.</li> <li>Label 4: By clicking this button the search details (label 5) are</li> </ul>	
	displayed. <b>Label 5:</b> Here more details about the transport requirements can be given. Specifying transport means and equipment works	

	similar to specifying the cargo type (see label 1)	
Lal	oel 6:	Search button.

## 3.3 Screen Associated with Marketplace Demands

Element	Description					
Page number	S09					
Page name	Simplified Visualization of Public Demand					
Screenshot	Finest eContracting Module (ECM)   HOME   PUBLIC OFFERS   PUBLIC DEMANDS   MY OFFERS   MY DEMANDS					
General Description & Screen Purpose	This screen shows a simplified view on a service demand from the public marketplace. This demand is associated with the content of the last row from S08 screen. Only relevant information from a service provider point of view is displayed. That is basic information about the provider, his or her contact data and address. Additionally, the most important data about the demand like earliest pickup, latest delivery, weight, amount and so on.					
Description of Red Labeled Elements	Label 1: Information about the potential customer.  Label 2: Details area about the demand details.					

#### 3.4 Screen Associated with Contracts

Description of Red	Label 1:	Information about the Party fulfilling the carrier role.	
Labeled Elements	Label 2:	Information about the Party fulfilling the shipper role.	
	Label 3:	Here general details about the contract are displayed like	
	type of contract, validity period, terms and conditions.		
	Label 4:	For blanket contracts the agreed capacity and the already	
	transported capacity are displayed. The user can see that there is still		
	a large amount of capacity unused which might affect the decision of		
	which provider should be used to transport the goods the next time a		
	service is required.		
	Label 5:	Here a list of penalty risks are displayed which apply to	
	the current state of the contract. In the screenshot a penalty risk of		
	50.000 € is displayed because a major part of the agreed capacity is		
	unused so far. This is only a risk and not a fact, and the penalty will		

satisfied.

only be enforced if the SLAs (Service Level Agreements, such as total amount of cargo to be transported) of the contract are not

#### 4 Conclusion

This document described the Proof of Concept (POC) Implementation of the E-Contracting Module (ECM) as it is today. In Section 2 a Fact Sheet was given which shortly described the key features, the implementation technologies, a guide how to access the hosed prototype and the deployment steps. In Section 3 each of the screens of the POC prototype was briefly described which should make it easily possible to try out the prototype.
