# 1 Introduction

## 1.1 Background

The aim of the **AgeingWell** Network is to build and animate a European network focused on improving the quality of life of older persons by promoting the market uptake of ICT solutions for Ageing well.

To achieve its aim, the following five **main objectives** of the **AgeingWell** project are:

- **Develop** guidelines for deployment and sharing of best practice between key competence centres;
- **Build** an ICT for Ageing Knowledge Centre with the aim to share the results with the Ageing Well Community;
- **Develop** an ICT for Ageing Society Strategic Agenda, with the aim of providing a study on options for future structure and implementation of EU innovation funding;
- **Promote** the European innovation reinforcement between innovative ICT industries & Ageing (in particular SMEs) and Venture Capital firms, Business Angels and other;
- **Raise awareness** within the European community of ICT & Ageing stakeholders through web-based communication, and the organisation of 3 international events and 11 national events.

## 1.2 Summary

This document presents a list of key stakeholders identified by the **AgeingWell** network, at Regional, National, European and Global Level identified in these 36 months of activity of the network. Stakeholders include innovative ICT SMEs offering solutions for Ageing sector, venture capital firms, end-users organisations, public authorities, among others.

Profile of stakeholders includes the following items: name of the entity, description, contact person, e-mail, telephone, website, country and category. The category is related to the main activity of the stakeholder. The members of the **AgeingWell** network decided to divide the stakeholders on the following categories:

- ICT SME & Industry;
- Investor;
- Public Authority;
- End-users organisation;
- Other organisation (Universities, Research Centers, R&D institutions, Insurance companies, etc).

## 2 Key Stakeholders

In this section, the process of identification and classification of stakeholder's organisations followed by the **AgeingWell** members is explained. Then, the identified stakeholders are listed and a short description of each organisation is presented.

A tailored template<sup>1</sup> for describing the identified stakeholders has been created and is in use by all founding members. This template allows collecting the information in a similar format and, by this, facilitates the production of the present deliverable.

The identification of relevant stakeholders is performed by all founding members since the beginning of the project and result from their professional activities and networking. Also the organisation and participation in events related to ICT for Ageing contribute to establish new contacts with these stakeholders and to collect information about them. The use of social media platforms and the release of the **AgeingWell** Newsletter contributed also to gather the interest of actors in this field that contacted the network for further information or to join it, and therefore new stakeholders are identified.

Initial search for relevant stakeholders was made in founding member's countries and then enlarged to other European countries and beyond. From an initial list of six categories (Industry; User organisation; Public authority; Investor; Housing and Insurance; and ICT solutions provider), founding members have decided to reformulate this list of categories according to feedback received from some stakeholders and also as a way of enhancing the usefulness of this document to potential users. In this sense, the identified stakeholders are now distributed in five categories: ICT SME & Industry; Investor; Public Authority; End-users organisation; and Other organisation (Universities, Research Centers, R&D institutions, Insurance companies, etc).

The classification of the stakeholder into a given category has into consideration the main activity of the identified stakeholder. Those stakeholders that joined the network indicate in the application form to which category they belong to.

The next sections present the stakeholder's profile, illustrated by category and country.

---

<sup>1</sup> A detailed description of this template is available on D2.1 - Template Manual to Support Gathering of Information, which was prepared on Month 2 of the project.

## 2.1 Stakeholders List by Category

### 2.1.1 ICT SME & Industry

<b>Organisation: Agfa HealthCare</b>		
<b>Description:</b> Agfa HealthCare, a member of the Agfa-Gevaert Group, is a leading provider of IT-based workflow and diagnostic image management solutions, as well as advanced systems for capturing and processing images in hospitals and healthcare facilities.

**Organisation: Cyprus Telecommunication Authority (CYTA)****Description:**

CYTA is a semi-government organisation. It was established with the aim of providing, maintaining and developing a comprehensive telecommunications service, both nationally and internationally. CYTA is considered to be the leading provider of integrated electronic communications services in Cyprus. CYTA provides a broad range of services and facilities which aim to satisfy the ever-increasing needs of its customers for voice and data applications in both fixed and mobile telephony. Particular emphasis is placed on the provision of value added services, such as content/multimedia via the Internet which, by all accounts, will be the dominant business activity of the next decade. Following the liberalization of telecommunications in Cyprus, CYTA faces the challenge of the convergence of telecommunications, information technology and multimedia, as well as that brought about by changes to the social, legal and political environment, especially since Cyprus became a full member of the European Union. CYTA has repositioned itself as a comprehensive/integrated electronic communications provider. The development of broadband and quadruple play services composes the spearhead of CYTA's strategy.

<b>Organisation: Exatronic – Engenharia Electrónica, Lda</b>		
<b>Description:</b> As leader in electronics solutions, Exatronic combines fine skills in order to vertically conduct research and technological development processes, create tailor-made products with added value, incorporate value and optimize manufacturing processes. The company is structured in 5 functional areas: Studies and Projects; Design and Development; Procurement and Purchasing; Manufacturing and Sales and Marketing. Exatronic manages the design and development processes of new products with a vertical and differentiating approach: “Having as starting point a simple idea or concept, we carry out the technical viability analysis, we build the whole R&D process, we manufacture the solution and we finish by delivering the new product.” Alternatively, and when satisfied with the developed solution, Exatronic can then just design and lead the manufacturing process and optimize the production and/or assembly costs through an international procurement for the components, materials and services necessary for the product formation. The company also implements and controls the purchasing, manufacturing and control quality process, thus guarantying a correct management of the supply chain of finished products close to their customers.

Organisation: IDMind		
<b>Description:</b> IDMind has extensive experience in the construction of mobile robotic platforms, involving the following main aspects: the design and construction of low-level microcontroller based modular electronics to acquire different type of sensor signals and to control different type of motors; establishing low-level interfaces in-between dedicated electronic modules; interfacing low-level electronics with high-level processing units; robust mechanical design and use of different materials and tools. The company has developed in recent years complete sets of robot platforms: small sized microcontroller based robotic kits; indoor differential platforms; indoor holonomic platforms; and outdoor tracked robots for remote inspection. The current core business of IDMind is to provide solutions for RTD projects, industry, and services. These projects include complete robot solutions, as well as electronics design and system integration for existing hardware platforms. IDMind is member of EURON, EUROP and SPR (Portuguese Robotics Society).

**Organisation: Intelligent Life Solutions – Produtos e Soluções na Área da Saúde, Lda.****Description:**

Intelligent Life Solutions (ILS) has as its mission to bring to society a broad range of services, identifying and filling gaps in the process of health management. Therefore ILS addresses individuals with special needs, companies with social responsibility, and, of course, companies or entities with responsibility in health management. With a large and experienced group of employees ILS undertakes projects with innovation, professionalism and dedication with a single common objective: more and better Health!

Vision: When the exponential line that relates effort and gain in Health management is becoming closer to the horizontal reference, only the development of innovative, nontraditional, and massive strategies can result in a significant gain.

<b>Organisation: Lindacare</b>		
<b>Description:</b> Lindacare provides a unified telemonitoring dashboard (Remote Patient Telemonitoring Unified Dashboard & Productivity Tool) that integrates vital signs collected from different vendors (first version targets on chronic cardiac patients covering vendors Medtronic, Biotronik, StJude, Boston Scientific) into one integrated dashboard. This creates significant time savings for the remote patient monitoring nurses and physicians, and improves the quality of care by sorting the collected data into priority alert levels, allowing more efficient follow up. Target markets are hospitals and medical centers with remote patient monitoring facilities.

Organisation: Microsoft Development Center Portugal		
<b>Description:</b> The Microsoft Language Development Center (MLDC) was founded in 2005. This Microsoft Development Center, integrated in the Portuguese Microsoft subsidiary, is one of the five established in Europe and the first, outside of the US, dedicated to local language development. MLDC unique characteristic is its long-term plan to bring key language component product development to the Europe. MLDC acts as an expansion branch of the Redmond-based product development group (under the Unified Communications' Group), responsible for speech in Microsoft and benefits from the experience, technological background and support of this group. The long term mission of MLDC is to perform local language development in Europe and other regions, starting with the Portuguese (and its variants such as the Brazilian Portuguese), for a range of Microsoft products and platforms. MLDC aims also to support the language expansion policy of the Redmond-based product group, by creating a "best practice of local language development" that can be applied in other regions and countries in Europe.

**Organisation: FI-C3****Description:**

**FI-C3's** aim is to promote projects by SMEs and web-entrepreneurs relating to innovative products/services in three business domains: **smart territories** (smart city guides, smart city platforms, smart city services), **media & contents** (multimedia augmented reality, transmedia/crossmedia devices, video games) and **care & well-being** (smart home, indoor position, personalized connected media). The project will offer between **50,000 and 150,000 €** to SMEs and web-entrepreneurs developing innovative products/services based on Generic enablers from FIWARE and Specific enablers from FI-STAR and FI-CONTENT 2. Selection criteria will be based on business idea, team, status and potential of the project. The **First Open Call** will be published on **November 1st, 2014** and the SMEs will start working in the project from January 2015. The **second call** will be open **May 1st, 2015** and the **third call** will be open November 1st 2015.

**Contact person:****E-mail:** [fiware@iminds.be](mailto:fiware@iminds.be)**Telephone:****Website:** <http://www.fic3.eu>**Country:** Belgium**Category:** Investors**Organisation: (FICHe) Future Internet CHallenge eHealth****Description:**

FICHe aims to accelerate SMEs and startups that develop innovative applications in the **eHealth** domain using FIWARE technology. FICHe will provide SMEs or startups with direct funding, technical training and business coaching. The project will offer up to 217,000 € to SMEs and web-entrepreneurs. Selection criteria will be based on technical excellence, **eHealth** solution and team. FICHe was open for applications on September 15th, 2014 and closed on October 31st, 2014. Selected SMEs and startups entered into an 18-month challenge, split in a three phase acceleration programme. SMEs and startups will translate their idea into a field lab tested prototype, while elaborating their business plan and go-to-market strategy. The most promising and innovative proposals complying with the requirements of each phase will be selected by External Independent Review Committee (EIRC) to continue to the next phase. 80 teams will enter the first phase with grant of 15.000€, 40 will continue with 50.000€, and 20 finalists entering the third and last phase will receive 152.000€.

<b>Organisation: Fundusz Mikro</b>		
<b>Description:</b> Fundusz Mikro is a microfinance institution. It was established in 1994 by the Polish American Enterprise Fund (PAEF) to promote the development of microenterprises in Poland. For this purpose USD 20 million were allocated. They decided to make available capital in the form of loans to those among micro business owners, who could use it in the most efficient way. Thanks to this approach many more microbusinesses now have the possibility of financing their growth.

**Organisation: Comfort Keepers – (Conforto em Casa, Lda.)****Description:**

The main reason that led to their creation of Confort Keepers is related to the gap at the level of home support services involving non-medical care in Portugal. Confort Keepers mission is to provide a better quality of life to senior adults living in their own home and with Confort Keepers help maintain a higher level of activity and autonomy. Comfort Keepers and the network partners are carefully selected and prepared to provide the following services: Family Care (companionship; preparation of customized meals; housekeeping;...); Personal Care (taking care of personal hygiene); Special Care (monitoring Alzheimer, Parkinson, chronic, degenerative and oncology diseases, among others); Permanent Care; Tele-Assistance Service (immediate support and assistance in emergency situations; guidance and Emergency Medicine; Indication of hospitals, clinics and pharmacies on duty); Alert Services (taking medications, medical consultations).

**Organisation: OSOZ - Nationwide Health Care System****Description:**

Nationwide Health Care System (Ogólnopolski System Ochrony Zdrowia OSOZ) is a unique eHealth platform and a provider of advanced eHealth, ICT and mHealth solutions in Poland. Here, each patient can start a free individual Health Account, and safely collect medical data (entered to the account by a doctor or patient on an individual basis). Owing to the data collected on the account, everyone can for example use individual healthcare programmes selected in accordance with their medical history. The platform is also a place of communication of healthcare organisations, doctors, pharmacists, and medical centres with the patient. The Individual Health Account and the Nationwide Health Care System platform currently constitute the largest project in the scope of eHealth in Poland.

Organisation: Melathron Evgiras Leukosias		
<b>Description:</b> Melathron has been established in 1959 as the first private nonprofit elderly care organisation in Cyprus following European standards for elderly care provision. It applies a unique integrated service care model for Cyprus practices. Melathron Evgiras is the oldest established privately held Care Service Organisation for frail, physically or cognitively impaired, seniors in Cyprus. It is conveniently located in an urban area in Nicosia (Cyprus) in a relaxed and homey atmosphere, enabling the residents to live to their physical, social and psychological potential. The fully qualified caring nursing staff of Melathron, strive to provide the added support that seniors need on a daily basis and at the same time to promote and maintain independent living of the residents by helping them to acquire the skills to live responsibly and healthy. The organisation offers a wide range of care support services to elderly (monitor medications, offer meals and some physical therapy) as well as to their families. The members of the staff have long term expertise in carrying out research and national studies related to elderly care at a national and international level. Melathron has been managing different R&D initiatives over its main years of operation, ranging from national but also international ones, specifically in R&D projects related to the introduction of innovative of elderly care practices and their related ethical and legal issues.

Organisation: Moving your soul		
<b>Description:</b> "Moving your Soul – A different way to be with Alzheimer" is a meeting place where people from all over the world have contributed their testimonies of how they have personally succeeded to connect with their family members, friends or patients affected by this type of ailment. These testimonies share sadness and pain as well as total acceptance and a true encounter with the human being behind the illness. Therein lays the magic key: to focus our attention on the human being in front of us instead of focusing in the loss of whom they used to be.

**Organisation: "Prof. dr. Marius Nasta" Institute for Pneumology****Description:**

The Institute for Pneumology "Prof. Dr. Marius Nasta" of Bucharest is one of the oldest hospitals in Romania. It started as Filaret Hospital, the first tuberculosis hospital in Romania. Showing constant interest towards the medical field it served, the Institute for Pneumology "Prof. Dr. Marius Nasta" became the most important medical and research institution in pneumology at national level. The institute carries out its activities on several directions: Scientific research; Educational activities; Training and professional qualification of medical staff from all over the country in the field of lung diseases, including tuberculosis; Highly qualified medical assistance; Since 1997, the Institute for Pneumology "Prof. Dr. Marius Nasta" coordinates the National Program for Tuberculosis Control in line with World Health Organisation recommendations. The institute is currently providing guidelines for tuberculosis control in Romanian and guides the activity of generations of specialists in the field of pneumology. The National Program for Tuberculosis Control ensures the elaboration and implementation in best conditions of the activities and programs for tuberculosis prevention and control at national level, thus significantly contributing to reducing the impact that TB has on public health as well as to reaching the National Strategy for Tuberculosis Control 2007 - 2011 goals. The Institute for Pneumology "Prof. Dr. Marius Nasta" is also one of the institutions that implement programs for TB prevention and control financed by the Global Fund to Fight AIDS, Tuberculosis and Malaria in Romania, Round 6, through the Romanian Angel Appeal Foundation.

**Organisation: Academy of Medical Sciences in Romania****Description:**

The Academy of Medical Sciences was established in 1935 by Law No 91, approved by the Senate and Chamber of Deputies and then promulgated by Royal Decree no.176/1935. This was possible due to the efforts made by Academician Daniel Danielopolu, who became Permanent Secretary of the Academy until 1948, when it was disbanded by the communist regime. In 1989 the Academy of Medical Sciences was reorganized by Academician Stefan Milcu, as its President, and since 2004, following to Law no. 264 the Academy is being working reaching by present a number of 190 full members, 41 members correspondents and honorary members at home and abroad. Throughout its existence, the Academy of Medical Sciences has been a force of consecration and work in medical research and have never received among members political personalities. In addition to the Academy of Medical Sciences, the Academy Foundation works also as Publishing House in Medical Research and regularly issues the Newsletter of the Academy of Medical Sciences in Romania.

**Organisation: Bulgarian Association of Information Technologies (BAIT)****Description:**

The Bulgarian Association of Information Technologies (BAIT) is the biggest, most representative and influential branch organisation in the sphere of information and communication technologies in Bulgaria.

Established in 1995, presently 135 member companies and organisations are enlisted in it. The Association includes companies in the trend of hardware, software, system integration, networks, telecommunications, Internet suppliers, etc. A great part of them provide their own solutions, products and services. BAIT companies are getting more and more successfully positioned finding an increasingly welcome presence at foreign markets in all sectors of the information and communication technologies. Bulgarian agencies of leading world manufacturers are among its members, too.

The companies, members of BAIT make for over 69% from the ICT market in Bulgaria. The prevailing part of the most substantial projects from Public Orders contracts in the ICT field are undertaken by BAIT member-companies and the amount of their share income surpasses 80%.

The mission of BAIT is to protect the general interests of its members by actively working for the establishing of information society in this country, for the development of the Bulgarian ICT industry and of the ICT market in general.

**Organisation: Centre for Healthcare Technology - University of Antwerp****Description:**

The Centre for Healthcare Technology (Centrum voor ZorgTechnologie - CZT) is an interfaculty center of expertise aimed at industrial valorization of innovative assistive technologies. From the previous experience of key members of CZT with the development of assistive technology for disabled persons grew the ambition to play a similar intermediating role in the creation of healthcare technology for the elderly as well. With its research CZT focuses on integrated applications and services that encourage and support independent living of people with disabilities and frail elderly as independent living improves quality of life and reduces social costs. The interfaculty Centre of Healthcare Technology was founded by the medical faculty, the faculty of pharmacy - biomedical and veterinary sciences, the faculty of sciences, the faculty of economic sciences and the colleges of technology and product development. Due to this interdisciplinary mix CZT has the in-house expertise to convert problems into solutions that are both efficient and economically feasible.

**Organisation: CINTESIS - Center for research in health technologies and information systems.****Description:**

Medicine is increasingly based on scientific evidence emerging from information and knowledge produced both in medical practice and research studies. More specifically, health technologies assessment studies and decision analysis in health rely on data and methods derived from computer sciences and biostatistics. Within this framework CINTESIS was created following a vision of harbouring synergetic multidisciplinary research work in order to gather the necessary critical mass to contribute to improving health care and education. In particular, CINTESIS research vision focuses both on (a) the development of methods and tools and on (b) the design and implementation of evaluation studies dealing with the collection, storage, coding, classification, processing, analysis, presentation, sharing and interpretation of biomedical data, information and knowledge.

CINTESIS was primarily formed by a highly motivated group of young clinicians and computer scientists, aggregating interdisciplinary knowledge and skills in medical practice and information management. In the near future, CINTESIS is expecting to increase dramatically the number of post-graduate students and PhDs. In fact, CINTESIS members have recently launched two master courses (one in Medical Informatics and another in Evidence and Decision in Health) and one MD/PhD programme (in Clinical and Health Services Research), which are pioneer in Portugal and will provide the basis for a continuous and sustained development of research projects.

In addition, over the past 3 years CINTESIS members actively participated in a number of educational (attendance to international courses, conferences and workshops) and dissemination activities (presenting results in several national and international seminars and organizing short duration courses), which helped to develop national and international networking activities.

**Organisation: Fraunhofer FOKUS - Fraunhofer Institute for Open Communication Systems****Description:**

Fraunhofer FOKUS develops solutions for the communication systems of tomorrow. As an independent research body the institute explores how communication networks will contribute to a more convenient and more secure living. Thus, the institute addresses important challenges in the society, including access to information, economic and sustainable use of resources, smart mobility and a modern governmental administration that is efficient as well as accessible from everywhere. Fraunhofer FOKUS is an important link between industry, governmental administration and the people.

Besides technical infrastructures, Fraunhofer FOKUS creates manifold practical concepts, applications and prototypes. In particular, Fraunhofer FOKUS is specialized in developing multi-domain networks and interoperable, user-centric solutions. In addition to the industries, political protagonists become more and more the drivers in the innovation business. Especially the governmental administration initiates major ICT projects and realizes them together with partners like Fraunhofer FOKUS. With more than 20 years of experience, the institute is one of the most important international ICT research partners.

GRADIANT is a private and non-profit foundation established in December 2007 and created for the purpose of aligning the university's knowledge with business demands. It plays a key role in the generation and transfer of knowledge in information technology and communications (ICT) to companies. The Center also has a commitment to quality and it has the certificate of Quality Management EN ISO 90001:2008 Systems and Project Management R & D + i UNE 166002. Both guarantee the highest quality in the management of all processes and projects of the Center.

At present, GRADIANT is located in Citexvi, the Technological City of Vigo. GRADIANT was born from the expertise of two leading research and transfer groups from the Higher Technical School Of Telecommunication Engineering of Vigo, from the Department of Signal Theory and Communications and the Department of Telematic Engineering as well. Both research groups have received the consolidated hallmark from the Galicia regional government (Xunta de Galicia), being the only Galician ones who have received it within the Telecommunications sector. This fact is proof of the expertise of the GRADIANT promoter groups.

**Organisation: INCDMTM****Description:**

The National Institute of Research and Development in Mechatronics and Measurement Technique (INCDMTM) is subordinated to the Economy Ministry and activates in the scientific research area (both fundamental and applied) as well as in the technological development area comprising mechatronics and fine mechanics. INCDMTM activity also focuses on elaborating performing measuring techniques. INCDMTM researchers' efforts are concentrated on developing various conventional and un-conventional mechatronic products and technologies. More, as a National Institute, INCDMTM contributes to attaining scientific and technological objectives stated by the National Research, Development and Innovation Plan (PNCDI) and the Nucleus Program. Together with the integration into the EU, INCDMTM aims at participating into as many competitions as possible and, consequently, respecting the eligibility criteria and being accepted. For reaching all these objectives, INCDMTM puts a great emphasis on quality management, ensuring that all the prerequisites it includes are respected. The main activities covered by INCDMTM include:

- Intelligent mechatronic measuring techniques elaboration;
- Non-electric measure device producing;
- Medical instruments design;
- Investigation and analysis device developing;
- Laboratory and scientific research devices production;
- Micro-mechatronics, mechatronics and robotics product realization.

**Organisation: Infoelder****Description:**

InfoElder is the website which includes all the information, services and products related to what a person might need in the second half of their life. In the later stages of life we begin to understand that part of our lives when we see ourselves gradually lightened from the economical burden of our children and the period when the dedication to professional life also decreases. As a consequence, we start to have more of the two resources that in the previous period were very limited: time, and a certain capacity for saving money. Retirement from a profession usually happens at some point in the later stages of our lives, so the free time at our disposal increases, but usually at the same time there is a reduction in disposable income.

InfoElder is the meeting point between the elderly, their relatives and the companies and professionals whose products and services are needed in the later stages of everyone's life.

Organisation: ISRMS - International Society for Regenerative Medicine and Surgery		
<b>Description:</b> ISRMS is a non-governmental and non-for-profit association, which acts as a multi-disciplinary platform for fundamental science and research, medicine and veterinary fields. As an international forum, ISRMS brings together the expertise of well-known specialists from different fields, in order to build a cooperation framework for the sustainable development of research and treatment therapies. The multi-disciplinary field of regenerative medicine aims at the replacement, repair or restoration of normal function to disease organs/tissues by the delivery of safe, effective and consistent therapies composed of living cells, administered either alone or in combination with specially designed materials (Langer & Vacanti 1993). The field covers what was thought originally to be separate therapeutic areas: cell therapy and tissue engineering (creation of in vitro tissues/organs for subsequent transplantation as fully functioning organs or as tissue patches) among others (Baron & Storb 2008). Therapeutic examples include replacement (transplantation), repair (exogenous cell therapy) or regeneration (mobilization of endogenous pools of stem cells).

**Organisation: Latvian Information and Communications Technology Association (LIKTA)****Description:**

LIKTA is the leading professional ICT sector NGO. Established in 1998, the LIKTA has more than 200 members – ICT companies, research and educational institutions, individual members (ICT professionals), and other associations. The LIKTA seeks to promote the ICT sector, the Information Society and E-government. Among the associations important areas of operations are ICT and digital skills education, improvement of the business environment and export incentives, protection of intellectual property, harmonization of ICT-related regulations and legislation, promotion of innovations, and knowledge transfer in the ICT sector. The LIKTA also organizes major forums for ICT professionals and non-professionals in Latvia. In 2005, the LIKTA launched an E-inclusion and E-skills development initiative, Latvia@World. The initiative's goal is to diminish digital and social gaps in society, to provide everyone with basic information society skills, and to promote the usage of existing E-services. More than 110,000 people of various ages, nationalities and occupations have acquired E-skills with the help of this initiative. Latvia has also been very successful in organizing the "Get Online" week in Latvia starting from 2010. This is a pan-European E-skills event. In 2011, 41,482 people took part in "Get Online" activities in Latvia over the course of five days – 1.8% of the total population. Latvia was the most active country in the EU in this regard. With the similar activity the "Get Online" week was organised also in 2012.

**Organisation: Norwegian Centre for Integrated Care and Telemedicine (NST)****Description:**

NST is the world's largest centre for research and development in telemedicine and e-health. The centre has strong interdisciplinary expertise, and aims to shape the health care of the future. Through user-oriented research and development, NST has contributed to good teamwork in the health sector since 1993. Telemedicine solutions and e-health give patients easier and better access to health services. Effective collaboration makes the skills and services of health personnel available to more people, and society's resources are used more effectively. Telemedicine, e-health and welfare technology are very important tools in the realization of the Integrated Health Care Reform. The NST has valuable knowledge and experience in this field, and has a responsibility to ensure that the reform will have the best possible outcomes for both patients and health professionals.

OUC is the country's second state university and the only institution of higher education offering recognised academic programmes at all levels (undergraduate, master's and doctorate) using the methodology of distance teaching. The University was established to fill an important gap for open and distance education in the higher education system of the Republic of Cyprus, in response to the growing demand for continuing education and lifelong learning. Placing great emphasis on research, the OUC promotes research programmes aiming towards the development of methodologies and corresponding high technologies for open and distance learning. The university's research strategy emphasises the importance of both basic and applied research. Members of the academic community pursue research, motivated by the principles of humanism toward the following objectives: to develop knowledge in their respective scientific fields at an international level, to remain up-to-date with recent developments in their area and, moreover, to fulfill the University's dedicated role as an innovative educational institution.

Organisation: The Cyprus Institute Ltd		
<b>Description:</b> The Cyprus Institute is a non-profit research and post-graduate education institution with a strong scientific and technological orientation, created in 2005. It is an issue-orientated institution, emphasizing international collaborations and cross-disciplinary research and education. The Institute operates under the aegis of the Cyprus Research and Educational Foundation (CREF), which is governed by a Board of Trustees, comprised of leading personalities of the international academic, political and business world. The principal objectives of CREF are the advancement of knowledge and its humane and benevolent application and the establishment of a new research and educational public-benefit organisation which shall generally promote research and education in Cyprus and abroad and shall aim primarily at benefitting the public interest at large.

**Organisation: TICBioMed - ICT Health Cluster of Spain's Murcia Region****Description:**

TICBioMed is a cooperation platform for technology firms, health organisations, universities and other stakeholders involved in technological innovation applied to medicine, healthcare and biology in Murcia Region (Southeast Spain). The cluster aims to develop innovative interactions between health organisations and their suppliers, moving from the vendor-customer relationship to a framework of innovation partnership cooperation. The objective is to align health needs to the services provided by ICT firms and university work groups, in a model called Aligned Innovation.

The TRIL Centre is an interesting example of a public-private collaboration established with the aim to discover and deliver technology solutions to support independent living for older people. The Centre focuses on three key areas: improving health and social engagement for older people, detecting and preventing falls in the home, and helping those with memory loss to maintain their independence. The TRIL Centre looks at the physical, social and cognitive consequences of ageing and develops technologies to address them.

Organisation: UnIFai – Research and Education Unit on Ageing / Institute of Biomedical Sciences Abel Salazar – University of Porto		
<b>Description:</b> The UnIFai - Research and Education Unit on Ageing is a young and dynamic group which works on gerontology and geriatrics through research, education, as well as, on practical applications. UnIFai established as its objective the study and application of gerontology in Portugal, through interdisciplinary work, transversely involving the domains of Health, Psychology, Education, Sociology, Anthropology, Demographics and Epidemiology. The main objective is to promote the existing knowledge about the processes of ageing and to increase the good practices of gerontology and Geriatrics in Portugal. The strategy of UnIFai focuses essentially on three main elements of action: research, training and specialized services provided to the society.

**Organisation: University of Cyprus - Computer Science Department****Description:**

The University of Cyprus (UCY) is the largest and oldest public University in Cyprus with long term experience in carrying out research and developments in the eHealth and elnclusion sectors. It is a public research-oriented higher education institution that has been participating in a wide variety of national and international funded research projects. The Department of Computer Science attaches major importance on research and development in areas like Mobile and Pervasive Computing, High-Speed Networks, Internet Technologies, Parallel and Distributed Systems, Intelligent Systems, and Medical Informatics and Telemedicine. UCY has expertise in the areas of location management, location based services, mobility of services, personalisation of wireless users, mobile data models, context awareness, collaboration in the wireless environment, design and development of ICT based services. Also UCY has a strong background in database technologies and data management issues, as well as in sensor networks and its application in pervasive environments. Moreover, UCY has an extensive and long-term expertise in the area of intelligent user interfaces, specifically in the definition/implementation of wireless and mobile environment and location and context based services for the e-Government, e-Health and Ambient Assisting Living sector. It has also extensive expertise in social networks design and development as well as virtual organisation and virtual teams as these teams are organized together to cater specific needs. Another area that UCY has great expertise is data management in sensor networks.

The University of Geneva is an institution devoted to research, teaching and dialogue. It is the site of academic creativity and the transmission of knowledge. Since its foundation in 1559 the UNIGE has developed ever higher ethical standards and steadily increased in quality and the will to innovation. Today it is one of Europe's leading universities. The UNIGE also shares the international calling of its host city, Geneva, a centre of international and multicultural activities with a venerable cosmopolitan tradition. Its desire to expand its collaboration with partner institutions and broaden its appeal to researchers and students from around the world has made the UNIGE a "globalised university", a meeting place for academic disciplines and various cultures, and a forum for ideas.

## 2.3 Stakeholders Profile

In total, 335 stakeholders were identified by the members of the **AgeingWell** network during the 36 months of activity of the network. When analyzing the organisations listed above by category (Figure 1), it is possible to observe that the majority of the identified stakeholders are **Other Organisations** (36%), which include many research centers, and **End-users Organisations** (23%) representatives.

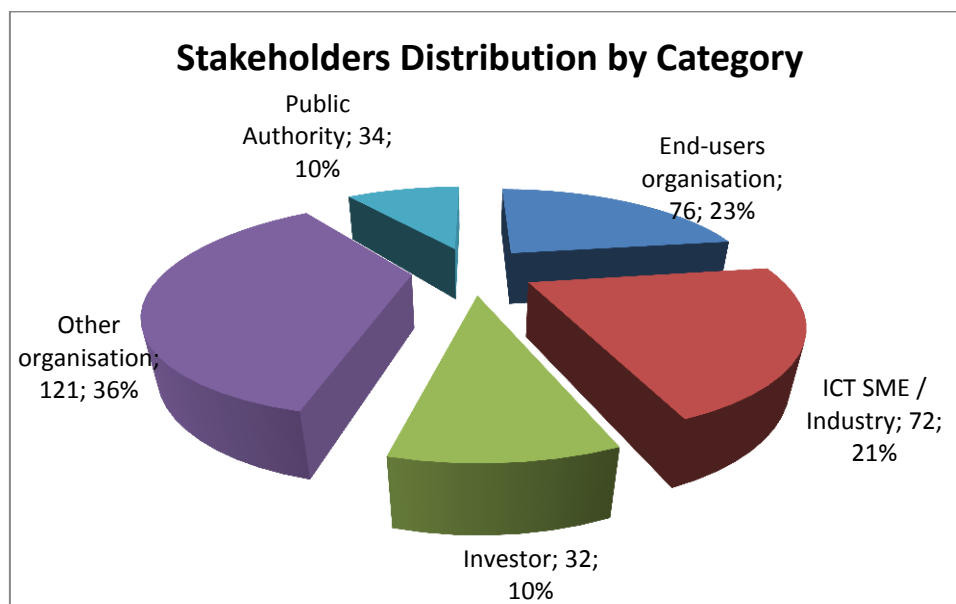

Figure 1 – Stakeholders per Category

Concerning location (Figure 2), the majority of stakeholders identified at this stage are located in Spain (15%), Portugal (13%), Poland and Romania (both with 10%).
