

 Project Title: Network for the Market uptake of ICT for Ageing Well AgeingWell Grant Agreement no. 297298	Deliverable reference: D4.4	Date: 31/07/2014
	Title: Individual Report on National Event	
	Responsible partner: HOPE	
	Editors: Pascal Garel (HOPE) Silvia Bottaro (HOPE)	
	Validated by: All partners	
 	Classification: Dissemination Level: Public (PU)	
Abstract: The following document describes the National Event held in Paris, France, to promote and disseminate the AgeingWell network activities and results. It was held as part of the <i>Salons de la Santé et de l'Autonomie</i> , the most important national event dedicated to ageing, hospital and information technology. The event was held 30 May 2013 gathering a diverse audience representing the different components involved in those fields.		

Revision History:

Revision	Date	Author	Organisation	Description
V.01	12/07/2013	Pascal Garel	HOPE	First draft of the deliverable
V.02	31/07/2014	Silvia Bottaro	HOPE	Update of the document according to the results from the project review meeting, in particular section 3.4.

Statement of Originality

1 Introduction

1.1 Background

The aim of the **AgeingWell** Network is to build and animate a European network focused on improving the quality of life of Elderly People by promoting the market uptake of ICT solutions for Ageing Well.

To achieve its aim, the following five **main objectives** of the AgeingWell project are:

- **Develop** guidelines for deployment and sharing of best practice between key competence centres;
- **Build** an ICT for Ageing Knowledge Centre with the aim to share the results with the Ageing Well Community;
- **Develop** an ICT for Ageing Society Strategic Agenda, with the aim of providing a study on options for future structure and implementation of EU innovation funding;
- **Promote** the European innovation reinforcement between innovative ICT industries & Ageing (in particular SMEs) and Venture Capital firms, Business Angels and other;
- **Raise awareness** within the European community of ICT & Ageing stakeholders through web-based communication, and the organization of 3 international events and 11 national events.

1.2 Summary

The following document describes the National Event held in Paris, France, to promote and disseminate the **AgeingWell** network activities and results. It was held as part of the *Salons de la Santé et de l'Autonomie*, the most important national event dedicated to ageing, hospital and information technology. The event was held 30 May 2013 gathering a diverse audience representing the different components involved in those fields.

In this report, the agenda of the event is presented, the discussions and conclusions of the event described and the list of participants included.

2 Agenda

30 May 2013

10h – 12h15

Système d'Information Hospitalier : où en est-on ?

Frank JOLIVALDT, Mission systèmes d'information des acteurs de l'offre de soins, DGOS

Régions Sans Film, l'imagerie médicale partagée en Ile-de-France : un exemple réussi d'innovation organisationnelle, technologique et financière

Valère DUSSAUX, Responsable du Département projets, GCS-D-SISIF

La construction d'une plate-forme régionale de services e-santé

Christian HUART, Responsable de la cellule des systèmes d'information en Santé, Agence Régionale de Santé Picardie

Christine BOUTET, Directrice médicale, Groupement de Coopération Sanitaire e-Santé Picardie

Identifier de nouveaux modèles économiques pour des prises en charges globales et coordonnées : bundled payment and shared savings ; les enseignements des exemples espagnol et américain

Pauline FONTAINE, COO, Adaptative HS

Josep PICAS, CEO, Adaptative HS

Points de vue

Christian NIBOUREL, Président de Syntec Santé, Président d'Accenture France

Bernard D'ORIANO, Président de la fédération LESISS

Conclusion : les perspectives européennes, le réseau thématique AGEINGWELL

Pascal GAREL, Directeur Général de HOPE, Fédération européenne des hôpitaux et des soins de santé

3 Summary of the event

3.1 Introduction

“Numérique en santé: les innovations qui changent la donne” (Personal health systems: innovations that change the environment) was organised on 30 May 2013 in Paris, in Parc de Expositions. This event was held within the exhibition “Salons de la Santé et de l’Autonomie”, a yearly event of three strands: Hôpital Expo, Gerontexpo and HIT (health information technologies). It was an appropriate place for dissemination as the three stands cover the whole spectrum of issues around ageing, information technology and care.

The goal was to discuss the relevance of personal health systems as “innovations that change the environment”, highlighting the existing advantages and challenges, in the context of ageing.

The initiative gathered more than 50 selected participants from the three files of knowledge: ageing, healthcare and information technology to exchange knowledge and practical experience, coming from the healthcare, management and industrial fields.

3.2 Progress of the Event

The event started with a general overview on hospital information systems in France, followed by two study cases: one on the medical imaging sharing in the region Ile-de-France, the other on building a platform in e-Health services. Two speakers then covered new economic models for personal health with examples from Spain and the US. As a conclusion, the **AgeingWell** was presented as a valuable European network for the exchange of best practices and networking.

Frank Jolivaldt, from the health ministry department of information system of healthcare providers presented a broad picture of what is happening in the field of health information system.

Valère Dussaux is in charge of the project department in the GCS of the Île-de-France region. GCS is the acronym of Groupement de Coopération Sanitaire, a structure devoted to information system, gathering all hospitals of the Ile de France region (12 million inhabitants). He presented the concept of shared medical imaging, a successful example of innovation organizational, technological and financial.

The two speakers following were Christian Huart in charge of information systems in the regional health agency Picardie and Christine Boutet, the medical director of the Groupement de Coopération Sanitaire e-Health in Picardie. They presented the construction of a regional eHealth platform.

Pauline Fontaine, COO and Josep Picas, CEO, both of Adaptative HS presented other economic models from abroad, bundled payment and shared savings, and what can be learned from Spanish and US examples.

To start the discussion with the audience, the industry was invited to comment the presentation. Christian Nibourel, President of both Syntec Santé (the French association of engineering and IT companies) and Accenture France and Bernard D’Oriano, President of LESISS (the federation of information systems companies) gave a challenging feedback.

The meeting was concluded by Pascal Garel, Chief executive of HOPE, the European Hospital and Healthcare Federation who presented the context of the seminar in the development of the **AgeingWell** Thematic Network.

3.3 Conclusions of the Event

The main conclusions, which can be taken from the speaker's presentations and the interventions of the audience:

- The importance to position European projects in the national context;
- The importance of large scale development of information technologies in the healthcare sector;
- The importance of awareness on best practices and existing technological solutions;
- The importance of exploiting opportunities of large gatherings for better have knowledge of other innovative experiences and promoting **AgeingWell** network;
- The importance of mixing audiences users and industry.

3.4 Feedback from Stakeholders

HOPE, as member responsible for the organisation of this event, contacted the speakers to collect their statement about the ageing well domain. From the contacts made, it has been possible to gather statements from three speakers, which are presented next.

Dr. Christine Boutet-Rixe, Medical Director of GCS-Santé Picardie

"You need to start from clinical need, build an infrastructure based on trust. A political regulation done with organisations representing professionals is key. Then the system has to be adapted with a real co-piloting. An evaluation model must be designed having in mind material benefits (reducing transport, days of hospitalization) as well as immaterial in terms of wellness and comfort for patients".

GCS-Santé Picardie¹ is involved in the creation of a regional eHealth platform which aims to promote the development of information systems in the healthcare and medical sectors in Picardie region. Based on her statement, it is highlighted that clinical and medical knowledge is the basis of these type of systems and that the involvement of key actors (professionals) is essential for their success.

Valérie Dussaux, GCS-d-SISIF

"Cloud computing is a tremendous helper to renovate information systems in hospitals. In our case this helps creating a neutral regional centre to archive images. This facilitated the development of telemedicine and teleradiology in all health areas."

GCS-d-SISIF² is a Cluster in the health sector, which is working to facilitate the interoperability and sharing of health information between the different systems in the Île-de-France region. Valérie

² GCS D-SISIF - Groupement de Coopération Sanitaire pour le Développement des Systèmes d'Information en Santé partagés en Ile-de-France. More information available: <http://www.gcstdsisif.fr>

Dussaux statement confirms the increasing importance of Cloud-based systems for managing health information. In fact, various studies and reports have been highlighting the advantages of cloud systems, such as scalability, resilience, adaptability, connectivity, cost reduction, and high performance.

Pauline Fontaine, European Association of Healthcare IT Managers

"There will be losers and winners in the IT industry. One cannot find the traditional borders between the different players with the new picture. More is coming with bundled payments. Payers, patients, healthcare providers all have to gain from this situation".

The European Association of Healthcare IT Managers (HITM)³ is established as the pan-European umbrella organisation of relevant national health managers and health-IT associations. Based on Pauline Fontaine statement it is clear that actors in the ICT and Ageing/Health sectors need to cooperate more and to strengthen the dialogue between them. Thus, networks such as the **AgeingWell** play an important role in this process as it aims at bridging the various stakeholders within the ICT4Ageing community, so they can share their perspectives, needs, expectations and experiences with each other; and from these synergies new initiatives and projects can emerge and address more efficiently those needs and expectations.
