

*Rigidoporus vinctus*, a species of *Rigidoporus* that needs a new genus. Photo from Florida, USA.

*Chaetoporus corticola*, a member of the *Oxyporus* clade (Hymenochaetales), is a difficult species complex that was revised during this project. Here *C. corticola* sensu typi from Finland.

*Rigidoporus microporus* is a species complex as shown during this project. These species are wood rotters but also act as pathogens and plantation pests. Their correct genus name is *Leucofomes*, not *Rigidoporus*. Here a species from Sabah,
