

**Figure 4. The overall logistics related to sample management in the INTEREST Study.** Logistics and Central Laboratory service providers distributed all required materials for sample preparation for all the study centres (blue boxes). The sites prepared all samples and stored the samples until they were shipped to Central Laboratory service provider (yellow boxes). Central Laboratory service provider conducted sample reconciliation and analysed MxA, CD73 and anti-drug antibody samples. They also shipped PIM and genetic samples to U.TURKU for analyses (green boxes). Both U.TURKU and Central Laboratory service provider uploaded their results to the database (red box). Red arrows indicate physical material shipments and blue arrows the electronic data entries.
