

Design principle for resource efficient flood risk governance	Conditions for success	Good Practices
Flood risk management should secure the level of flood risk reduction that is found acceptable at the lowest possible societal cost	<ul style="list-style-type: none"> - The process demonstrates due concern for matters related to resource efficiency - Actors (citizens) are incentivized to undertake risk-reducing measures 	<ul style="list-style-type: none"> - Well-developed practices for CBA, also for non-monetary impacts (e.g. England)
