

## **Overall Activity Report for the EU-Project “European Action Plan of Organic Food and Farming – ORGAP”**

Project no. CT-2005-006591

Project acronym: ORGAP

Project title: European Action Plan of Organic Food and Farming

Instrument: Specific Support Action (SSA)

Thematic Priority: Policy orientated research

Period covered: from 01.05.2005 to 31.04.2008

Date of preparation: July 08

Start date of project: 01.04.2005

Duration: 36 months

Co-ordinator: Otto Schmid

Revision: completed

Co-ordinating Institution: Research Institute for Organic Agriculture, FiBL

SIXTH FRAMEWORK PROGRAMME

Funded by the European Commission under the  
Sixth Framework Programme for European Research & Technological  
Development (2002-2006) - Thematic area Food quality and safety

# EXECUTIVE SUMMARY

The aim of this overall activity report is mainly to summarize the project objectives, the methodology, the work performed and the final results of the project, which are in more detailed described in the final synthesis report (Deliverable 14) of the project. Furthermore it describes the achievements and the impact on the sector as well as the publishable results and dissemination activities.

The European Commission released in June 2004 the European Action Plan for Organic Food and Farming (EUOAP). With this Action Plan the Commission intended to assess the situation of organic farming and to lay down the basis for future policy development. At the national level many governments have also developed Action Plans for promoting organic farming.

The European Organic Action Plan gave the rationale that the DG Research of the European Commission decided to fund a specific support project, the ORGAP Project No. CT-2005-006591 within the 6<sup>th</sup> Framework Research Programme. This project, with the title "*European Action Plan of Organic Food and Farming - Development of criteria and procedures for the evaluation of the EU Action Plan for Organic Agriculture*", started in May 2005 and was completed in April 2008.

The overall objective of this project was to give scientific support to the implementation of the EUOAP by the development of an evaluation toolbox.

In the project 10 partners from 9 countries (CH, UK, DE, IT, DK, SI, CZ, NL, ES) participated, as well as the European umbrella organisation of the Organic Agricultural Movements (IFOAM EU Regional group), ensuring a broad stakeholder consultation process and dissemination all over Europe.

The European Action Plan for Organic Food and Farming (EC 2004) is the result of a three-year process of developing the Action Plan, starting in 2001. The involvement of stakeholders in the development of the EUOAP was mainly in the explorative phases involving identification of organic sector development needs and possible solution phase. The plan contained different 21 action points. The European Commission has started to implement the actions of the European Organic Action Plan, many of which have been achieved or are at an advanced stage of completion. The most significant initiatives are the publication of the new Council regulation (EC) 834/2004 on organic production and labelling of organic products and the consumer information campaign.

In the project a historical analysis of organic action plan development is given, in particular about the European as well as national organic action plan for organic food and farming. Eight national action plans were analysed. They vary very much with regard to the development process, targets, objectives and the emphasis of measures on certain areas. This is due to quite different political and socio-economic framework conditions for organic farming in these countries.

A main chapter is about organic action plans – what we know and do not know. When analysing the success of action plans the following question is crucial: What would have happened if the organic action plan would have not been in place? To answer this question it is important to keep in mind and to analyze the broader policy and market environment relevant to organic farming in order to judge success of the action plan as well as new challenges for organic farming such as climate change. It is clear that just looking at the originally envisaged targets and objectives might not be sufficient to judge whether or not an action

plan has been successful. One key argument going beyond clear targets and well balanced measures is that embedding action plan development in the wider policy area seems to be absolutely essential to be successful. However, there are a number of other issues to be dealt with which are also quite important prerequisites for successful organic action plans such as stakeholder involvement, coherence and consistency of action plans and an evaluation monitoring capacity.

Stakeholder involvement helps improving the information basis and the legitimacy of public policies. This is especially important on complex issues such as organic action plans, which involves actors with stakes in issues as different as the values of organic food and farming, the food market and the public goods of organic food and farming at one and the same time. In the selection of stakeholders to involve this should be considered; the ORGAP project has developed a theoretical model for the stakeholder classification. Successful stakeholder involvement demands: careful preparations of which stakeholders to include at any stage of the policy process and of the methods used to promote participation; sufficient time for the stakeholder to react.

For an evaluation of the internal and external coherence of the EU Organic Action Plan (OAP), the ORGAP project team made use of empirical methods and techniques suggested for analysing the synergy of programmes as well as their cross-impacts. A policy analysis of key synergies (positive and negative) was performed by means of a matrix of cross impacts. In order to provide an early assessment of potential risks and problems associated with the implementation system of the EU OAP, the ORGAP team used an adapted version of (process) Failure Mode & Effect Analysis (FMEA) combining the knowledge of a core team made of researchers from partner institutions with external expertise of a support team.

The development of an Organic Action Plan Evaluation Toolbox (ORGAPET) (Lampkin et al. 2008; [www.orgap.org/orgapet](http://www.orgap.org/orgapet)) was a central part of the ORGAP project to support the European Commission in the evaluation of the EUOAP. ORGAPET has been developed as a web and CD-ROM-based toolbox, with hyperlinks between the different elements designed to make navigation easy. The Organic Action Plan Evaluation Toolbox (ORGAPET) is a collection of different information/data sources and evaluation tools, including participative techniques, quantitative assessments and methods to identify relevant indicators, which can be used selectively to meet the needs of a particular assessment of national or EU organic action plans.

“Golden Rules” for organic action plans as well as the recommendations for different actors such as the EU commission, EU member states and private stakeholders are summarised.

With regard to the dissemination and use of the results it is shown that ORGAPET – the Action Plan Evaluation Toolbox – and the ORGAP Manual – a resource handbook for the development, implementation and evaluation of organic action plans are unique and innovative tools. It is for the first time that for specific action plans of the EU such tools have been developed which complement the EU general evaluation tools (like the MEANS framework and Evalsed). During the project many dissemination activities were conducted.

## Contractor list

No.	Name:	Acronym	Country

# 1 Introduction to the project

## 1.1 Background rationale for the project

Currently, the organic food sector is one of the most rapidly expanding sectors of the food industry in many European countries. In 2006, the European organic market grew by more than 10 percent, with a total value of approximately €14 billion. In many established European markets demand is growing considerably faster than supply (Willer et al. 2008).

Amongst the reforms to the European Common Agricultural Policy (CAP), that began in the late 1980s, came recognition of the key role that organic farming could play in meeting revised objectives: reducing surpluses, promoting quality goods and integrating environmental conservation practices into agriculture.

Since 1990 on, organic farming development in the European Union (EU) has been stimulated mainly by two factors related to strong consumer demand and policy support through:

- EC Reg. 2092/91, the EU-wide legal basis for organic farming, and
- area payments as an agri-environmental measure in the framework of EU rural development programmes (EC Reg. 2078/92 and 1257/1999).

Responding to concerns that area payments as 'supply-push' measures can impact negatively on the markets for organic products, policy-makers have started to take a more integrated approach to policy using the 'action plan' mechanism. This involves detailed analysis of the specific development needs of the sector and the application of a mix of demand-pull and supply-push measures in a co-ordinated way to help address the needs identified (Häring et al. 2004, Lampkin and Stolze 2005).

The European Commission released in June 2004 the European Action Plan for Organic Food and Farming (EUOAP). With this Action Plan the Commission intended to assess the situation of organic farming and to lay down the basis for future policy development. At the national level many governments have also developed Action Plans for promoting organic farming.

The European Organic Action Plan gave the rationale that the DG Research of the European Commission decided to fund a specific support project, the ORGAP Project No. CT-2005-006591 within the 6<sup>th</sup> Framework Research Programme. This project, with the title "*European Action Plan of Organic Food and Farming - Development of criteria and procedures for the evaluation of the EU Action Plan for Organic Agriculture*", started in May 2005 and was completed in April 2008.

## 1.2 Objectives of the project

### 1.2.1 Overall objective

The overall objective of this project was to give a scientific support in the implementation of the European Action Plan for Organic Food and Farming. This was to be achieved by the identification of a set of suitable indicators and concepts as a basis for the development of an integrated evaluation tool. By means of this tool, the long-term and short-term effects of the implementation of the EU Action plan for Organic Food and Farming will be assessed.

## 1.2.2 Specific objectives

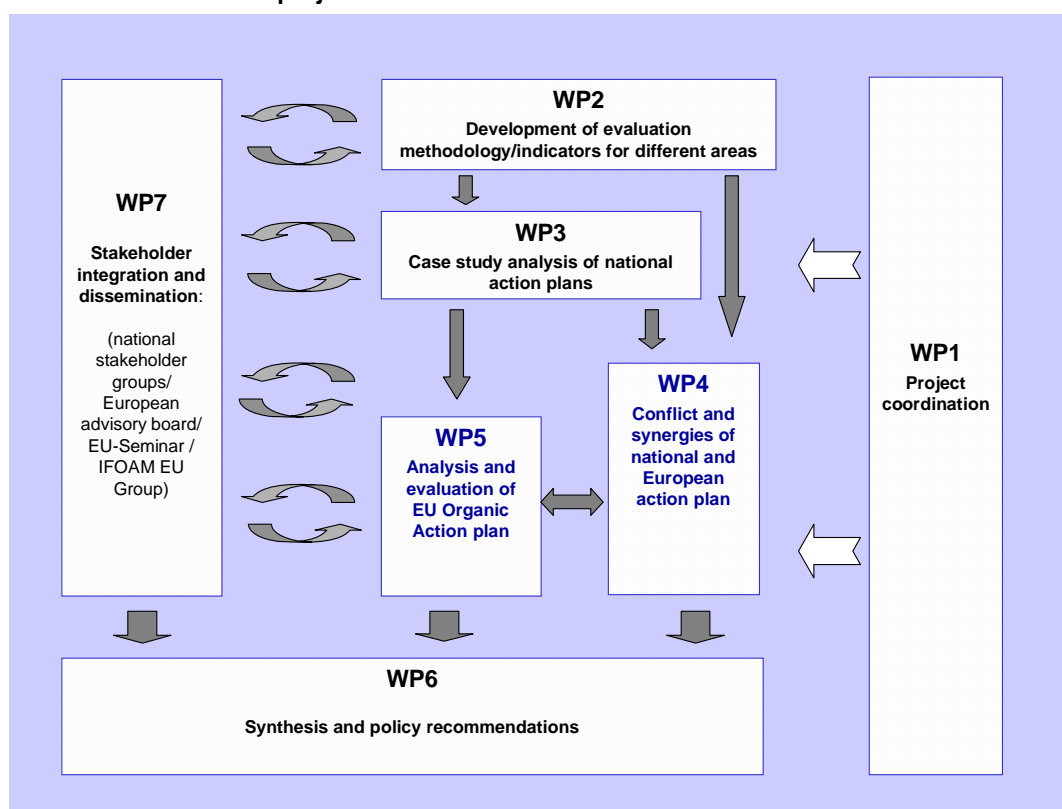

The project consisted of the following specific objectives and work packages:

- Development of a toolbox (ORGAPET) for EU and national administration to evaluate and monitor the implementation of the European Action Plan along the whole food chain for the following areas: information, training and education, research, production, processing, market development, certification, and public expenditures.
- Testing of the evaluation toolbox on a selected number of existing national action plans
- Identification of conflict areas between national and EU Action Plan targets concluding in policy recommendation to the Commission and national authorities.
- Early assessment of potential risks and problems associated with the implementation of the EU Action Plan and test initially the evaluation toolbox on the National level in those countries where an action plan is in place.
- Policy analysis for the implementation processes and procedures.
- Recommendations for different actors elaborated with involvement of essential stakeholders.

## 1.3 Overall project structure and methodologies

In figure 1 below the general structure of the project and the inter-linkages between the different work packages are schematically indicated.

**Figure 1: Pert Diagram showing interconnection of work packages (WPs), responsibilities, and the major flow of information within the project.**

As an overall methodology, the project followed an approach that combined analytical desk research with empirical qualitative research with a strong participatory approach.

The empirical part consisted of different methods such as focus group discussions, qualitative in-depth interviews and workshops with stakeholders from the organic farming sector and the supportive environment. Due to the qualitative focus of the project, no statistical analysis of the empirical data has been undertaken. The empirical analysis was conducted in each partner country, which had an organic action plan: United Kingdom, Germany, Italy, Denmark, Slovenia, Czech Republic, the Netherlands and Spain. The results were commented on and augmented by the members of the project advisory committee, where other countries and public institutions were also represented.

The following workpackage description shows the stages of the project with their corresponding workplan and the methods applied.

The workplan consisted of six work packages (for a diagrammatic representation see Figure 1) each designed to address specifically the key objectives.

The six workpackages were the following:

#### **Work package 1**

addressed the project management and scientific co-ordination tasks, including communication and dissemination, quality management, time planning, reporting and financial control.

#### **Work package 2**

involved the development of the organic action plan evaluation toolbox (ORGAPET), incorporating quantitative and qualitative product and process indicators covering the key areas of the EU organic action plan, building on existing socio-economic and agri-environmental policy evaluation methods (MEANS, IRENA) and incorporating work from current and previous projects on organic farming policy analysis and development. Stakeholder input into the development of the toolbox was emphasised.

#### **Work package 3**

provided a general overview and status quo analysis of national action plan objectives, design and implementation in 8 case study countries, as well as an analysis of the results of existing evaluations of a selection of these national action plans in order to a) draw conclusions concerning issues affecting the success or failure of these plans and b) determine the potential contribution of the results and available data to the application of ORGAPET at the European level. Group interviews with stakeholders in the case study countries were used to assess the feasibility of applying the ORGAPET approach at national level and to prepare for its application at the European level. In a special subtask there were focus group discussion on the identification of areas of conflict and/or synergy between objectives of national and EU action plans and their significance for the implementation of the EU Action Plan at national level. This provided the basis for the development, again with stakeholder input, of strategies aimed at resolving the potential conflicts and exploiting the synergies in order to facilitate implementation of the EU Action Plan at national level.

#### **Work package 4**

provided an early assessment of the potential risks and problems associated with specific policy-relevant areas and assists in the initial implementation of the EU Organic Action Plan

by offering a structure for thinking through the likelihood, seriousness and probability of detection of potential problems. The work package also involved the testing of the ORGAP evaluation toolbox at the European level in the context of the early stages of implementation of the EU Organic Action Plan.

### **Work package 5**

delivered the synthesis of the results of the analyses of national action plans and the implementation of the EU action plan, taking into account potential conflict/synergy areas and risk/problems. Policy conclusions relating to the implementation and development of EU and national action plans were identified. On the basis of the testing in earlier work packages, the ORGAP evaluation toolbox has been revised and a manual for the initiation and evaluation of action plans was produced.

### **Work package 6**

This WP paralleled the project co-ordination work package, focusing on the effective integration of stakeholders in the project work by means of national workshops, interviews with national stakeholders, European advisory committee meetings, electronic discussion groups and other means of consultation with/dissemination to stakeholders and non-academic audiences.

This summary in the overall activity report interprets and synthesises all the work done in the ORGAP-Project, based mainly on the executive summary of the final project synthesis report (Deliverable 14, [www.orgap.org](http://www.orgap.org)). The main focus areas are: the analysis of organic action plan at European and national level what we know about organic action plans, the issue of stakeholder involvement, the internal and external coherence of the European Organic Action plan, the ORGAPET (evaluation toolbox), the “Golden Rules” for organic action plans and the recommendations.

## 2 Project results

### 2.1 Analysis of organic action plans at European and national level

Action plans can be found in most EU member states. At national level, action plans provide a mechanism to ensure a balanced policy mix, reflecting different aims and the various supply-push and demand-pull policy instruments available, tailored to local conditions.

#### 2.1.1 European Action Plan for Organic Food and Farming

The European Action Plan for Organic Food and Farming (EC 2004) is the result of a three-year process of developing the Action Plan, starting in 2001. This process led to: a Commission staff paper exploring the options for an action plan in 2001; the establishment of an independent expert working group in 2002, a public internet consultation on specific options in February 2003; a European Parliament hearing on the action plan options in June 2003; and a public hearing on the action plan options in January 2004. In June 2004 the action plan was decided by the EU Council in June 2004, following significant internal debate within the Commission and the EU Parliament.

The involvement of stakeholders in the development of the EUOAP was mainly in the explorative phases involving identification of organic sector development needs and possible solutions. The actual action plan was prepared after the public hearing in January 2004, so that stakeholders were not able to comment on the action plan document or the balance of individual actual action points.

During the subsequent implementation phase, primary responsibility also rests with the EU Commission, with input from the EU Council, EU Parliament and member-state government representatives, with only limited input from other stakeholder groups.

In 2004 the European Commission launched the European Action Plan for Organic Food and Farming. The plan contained 21 action points, which relate to the following areas:

- Consumer information and promotion campaigns;
- Improved research, market intelligence and statistical data collection;
- Full utilisation of the rural development programme and other existing options to support organic farming;
- Improving the transparency, scope and implementation of the regulation defining organic farming

The European Commission has started to implement the actions of the European Organic Action Plan, many of which have been achieved or are at an advanced stage of completion. The most significant initiatives are the publication of the new Council regulation (EC) 834/2004 on organic production and labelling of organic products and the consumer information campaign, launched in July 2007. The continued inclusion of organic farming in the 2007-2013 rural development programmes and in the FW7 research programmes are also important outcomes.

## **2.1.2 National organic action plans**

The development of national organic action plans started in Europe in 1995 when Denmark introduced its first organic action plan. Denmark thus acted as a forerunner and pioneer in this field. Nowadays, most EU Member States have organic action plans for organic food and farming. Of those that don't, some have plans in preparation.

Under the framework of the ORGAP Project, six national (CZ, DK, DE, IT, NL, SI) and two regional (Andalucia (AND), England (ENG)) action plans for organic food and farming were compared. As a consequence of the very different situation in the eight case-study countries, the action plans studied vary in their scope. The English and the Dutch action plans represent market-driven and demand-led approaches with a clear focus on market development measures. The German Federal Organic Farming Scheme on the other hand puts a distinct emphasis on informational policy instruments to strengthen the organic sector through consumer information as well as through research and development. Finally, the Andalusian, Czech, Danish, Italian and the Slovenian action plans represent quite broad approaches integrating a broad portfolio of measures targeted to supply and market development as well as to information and research.

Apart from the Andalusian Action Plan, all other action plans studied include quantitative targets. Most typically targets for organic adoption are set (CZ, DK, NL, SI, DE). However, the Dutch and Slovenian action plans include a combination of targets addressing the share of nationally produced organic products, the domestic organic market share in general, organic sales per capita and the development of tourist farms. The English action plan target was defined in terms of the proportion of the organic market for indigenous products supplied by domestic producers.

To conclude, the case study action plans vary with regard to the development process, targets, objectives and the emphasis of measures on certain areas. This is due to quite different political and socio-economic framework conditions for organic farming in these countries. The comparison revealed that the weaknesses identified in the status quo analyses have only partly been translated to the targets and measures included in the action plan documents. This is on the one side a result of the national priority and budget setting and on the other side on the interdependency between EU policies and national policies. However, as all action plans were developed together with stakeholders, the composition of the stakeholder groups and the power of the initiating actor are crucial to the target and priority setting.

## **2.2 Organic action plans – what we know and what we do not know**

### **2.2.1 What makes a successful action plan?**

This question is much more difficult to answer than it looks at first sight. Many other economic, social and policy developments influence the organic sector and often instances occur which have not been foreseen when a certain action plan was devised. Because of this a simple measurement of the state of a specific objective might be too simplistic. Under certain circumstances an organic action plan could already be regarded as a success if the measures contribute substantially to a development in the right direction. The point of reference would be here: What would have happened if the organic action plan would have not been in place?

The second point to keep in mind in judging the success of an organic action plan is to be aware of the fact that such action plans are often not complete in a sense that they fully include all political measures directly relevant for organic farming. In such cases it is important to keep in mind and to analyze the broader policy and market environment relevant to organic farming in order to judge success of the action plan.

Organic farming policies can of course only be successful if they are successfully implemented and need sufficient care and knowledge with respect to the often numerous legal conditions outside the specific organic farming area that influence implementation. It also means that a clear mission of implementation agencies and qualified and motivated personal involved are a key to successful organic policies and to successful organic action plans.

Is the concept of an organic action plan an outdated concept? Some policy makers believe that it has been a fashion and its time is over. The authors of this report are convinced that any attempt to unify elements that influence organic farming and organic farming policies and to bring policies into an integrated, coherent framework will still be necessary and welcome in the future. Whether such attempts in the future will be called organic action plans is a different issue.

Currently some key challenges include the question whether the general trend in agricultural prices has actually been reversed. If agricultural prices which tended to decrease in real terms throughout the 20<sup>th</sup> century are actually moving upwards due to factors such as increased demand for agricultural products, climate change and a possible slowdown of technological progress. Such general developments will also influence the development of organic farming and the development of suitable measures to support it. Some of the implications of a higher price level for conventional agriculture and a higher volatility of prices both in the conventional and organic markets might challenge the continuation of the traditional per hectare organic support policies. If climate change is actually perceived as the key challenge for decades to come then effects with respect to mitigate climate change of organic farming and with respect to the adaptive capacity of organic farming are quite important for any policy justification in support of organic farming. And finally, there is the productivity issue. If the actually demand for food stuff is increasing rapidly throughout the world then the obvious limitations of organic farming in this respect reported from industrial countries become more serious. In that context research and development supporting increasing productivity in organic farming might become much more important than in the past.

It is clear that just looking at the originally envisaged targets and objectives might not be sufficient to judge whether or not an action plan has been successful. One key argument going beyond clear targets and well balanced measures is that embedding action plan development in the wider policy area seems to be absolutely essential to be successful. However, there are a number of other issues to be dealt with which are also quite important prerequisites for successful organic action plans such as stakeholder involvement, coherence and consistency of action plans and an evaluation monitoring capacity.

## **2.2.2 Stakeholder involvement**

Stakeholder involvement may be understood and carried out in quite different ways including the provision of information, providing opportunities to comment on proposals, and empowering stakeholders to make their own choices.

When preparing the toolbox aimed for evaluating the European Organic Action Plan in the ORGAP project, attempts were made to involve both organic and mixed stakeholders in various steps in eight different national/regional settings and with different methods. These experiences form the background for recommending stakeholders with a purely organic and/or mixed portfolio to involve through group discussions in order to increase and optimize their analytical capacities and thereby their delivery of relevant information regarding the preconditions for implementing the EUOAP and for assessing its policy impacts. Parallel to this, relevant non-organic stakeholders could be involved on the basis of individual interviews or small group interviews.

When deciding on which stakeholders to involve in any stage it is thus necessary to identify all stakeholders considered relevant to the issue and to clarify for each of them which perspective they represent in first priority. Therefore a general model for analyzing stakeholder involvement in public policy on organic food and farming has been developed in the project. It includes a distinction of expertise involved in the three main perspectives of organic action plans realised in Europe up to now: the specific values defining organic food and farming; the market perspective as organic food in most plans is expected to develop in response to consumer demand; and a political recognition of the public goods delivered as a consequence of performing organic farming practices. With regard to each of these three perspectives, it is possible to specify expertise of stakeholders acting in the core or periphery of the perspective and to distinguish expertise of purely organic stakeholders and other stakeholders with a mixed or even non-organic expertise relevant for the development of policies in support of organic food and farming.

The degree to which participatory methods realise their potential contribution depends critically on how carefully they are used and in what context. There is no one set of techniques to be mechanically applied in all contexts for all participants, but a diverse range of possible techniques which need to be flexibly adapted to particular situations and needs.

Stakeholder involvement helps improving the information basis and the legitimacy of public policies. This is especially important on complex issues such as organic action plans, which involves actors with stakes in issues as different as the values of organic food and farming, the food market and the public goods of organic food and farming at one and the same time.

Successful stakeholder involvement thus demands: careful preparations of which stakeholders to include at any stage of the policy process and of the methods used to promote participation; sufficient time for the stakeholder to react; this means at least 8-12 weeks of time for allowing substantial and broad participation, in particular in the case of involvement of farmers organisations, and good communication and transparency in each of the five stages of the policy process. Although this results in higher costs and more resources for those administrating the process, the outcome of such a process will improve the legitimacy and acceptability of the decisions and will facilitate very much the implementation (e.g. through public private partnerships). Such a more participative, transparent and time-balanced process helps to avoid unnecessary discussions and misunderstandings, which at the end might be more effective and cost-efficient.

### **2.2.3 Internal and external coherence of the EU Organic Action Plan**

For an evaluation of the internal and external coherence of the EU Organic Action Plan (OAP), the ORGAP project team generally made use of empirical methods and techniques suggested for analysing the synergy of programmes as well as their cross-impacts.

A policy analysis of key synergies (positive and negative) was performed by means of a matrix of cross impacts as specified in the MEANS framework (EC, 1999). Two separate matrices were constructed: to appraise the internal coherence between the various measures of the EU Organic Action Plan; and to appraise the external coherence between the EUOAP and some national organic action plans. Experts involved in this evaluation process (Evaluation team) identified any synergy which may exist between pairs of measures or categories of measures. The effects of synergies or conflicts have been rated with the help of 2 electronic consultation rounds. After validation of these ratings, the calculation of the “synthetic” coefficient of synergy was performed, in order to evaluate the overall level of synergy/conflict within the European Organic Action Plan. The analysis suggests that Actions 9 (ensure integrity) and 10 (harmonisation of standards) are essential for the success of the EUOAP, given their synergetic effects. They in addition enter into synergy with many other actions. Interesting is also Action 13 (risk based-inspections) with a high coefficient of synergy and number of measures with which has interactions.

In order to provide an early assessment of potential risks and problems associated with the implementation system of the EU OAP, the ORGAP team used an adapted version of (process) Failure Mode & Effect Analysis (FMEA) combining the knowledge of a core team made of researchers from partner institutions with external expertise of a support team (Advisory Committee, EU Commission). The analysis revealed that no single failure mode is particularly risky. Nevertheless the most important cause-effect relationships mentioned were: lack of stakeholder involvement – lack of capacity building; inadequate information and promotion campaign – lack of knowledge/awareness of organic farming; lack of information – lack of political interest to support organic farming.

## 2.3 Organic Action Plan Evaluation Toolbox (ORGAPET)

The development of an Organic Action Plan Evaluation Toolbox (ORGAPET) (Lampkin et al. 2008; [www.orgap.org/orgapet](http://www.orgap.org/orgapet)) was a central part of the ORGAP project to support the European Commission in the evaluation of the EUOAP. ORGAPET has been developed as a web and CD-ROM-based toolbox, with hyperlinks between the different elements designed to make navigation easy. The Organic Action Plan Evaluation Toolbox (ORGAPET) is a collection of different information/data sources and evaluation tools, including participative techniques, quantitative assessments and methods to identify relevant indicators, which can be used selectively to meet the needs of a particular assessment of national or EU organic action plans.

The toolbox is structured around ‘compartments’ or sections containing ‘tools’ fulfilling different functions. Each section contains an overview document and a series of annexes detailing a range of methodological approaches (including background documents, relevant data sources and other items), as well as examples of how these have been applied in specific cases.

ORGAPET is designed to provide a comprehensive guide to the different aspects of policy evaluation in the context of organic action plans, and in doing so to meet the needs of different groups. There are three levels at which it can be used.

The printed manual (also available in pdf form from [www.orgap.org](http://www.orgap.org)) provides a basis guide to users of the evaluations, so that they might better understand some of the tools and procedures used in an evaluation and the results contained in an evaluation report – the manual

also includes ORGAPET as a CD-ROM. The main overview documents of each Section of ORGAPET should provide an introduction to key evaluation issues that should be considered by programme managers and those commissioning evaluations.

Links to relevant internet resources, data sources, literature and examples where techniques have been applied in similar contexts are provided to assist evaluation teams carrying out evaluations.

**Tab. 2-1. Content of the Organic Action Plan Evaluation Toolbox (ORGAPET)**

**Part A: Background and context**

- Section A1: Introduction to organic action plans and the ORGAP Project covers:
- Section A2: Principles of policy evaluation with reference to organic action plans
- Section A3: How does policy influence the development of organic farming?
- Section A4: Involving stakeholders in programme design, implementation and evaluation
- Section A5: Planning an evaluation

**Part B: Evaluating programme design and implementation**

- Section B1: Evaluating the process of programme design and implementation
- Section B2: Assessing coherence and failure risk of action plans
- Section B3: Methods for evaluating the level and nature of stakeholder involvement

**Part C: Evaluating programme effects**

- Section C1: Methods for identifying objectives to be evaluated considers:
- Section C2: Methods for defining indicators
- Section C3: Generic
- Section C4: Using expert (including stakeholders) judgement

**Part D: Synthesis**

- Section D1: Integrating and interpreting results
- Section D2: Examples of existing evaluations

## 2.4 “Golden Rules” for organic action plans and recommendations

Detailed recommendations are found in the ORGAP Manual, in ORGAPET and the final project report (Schmid et al., 2008), which is available to the public via the project web site [www.orgap.org/publications](http://www.orgap.org/publications).

### 2.4.1 “Golden Rules” for organic action plans

The “Golden Rules” for organic action plans consider the following points as being important:

- Participatory stakeholder involvement – early & with resources, in all stages of OAP;
- Good communication during entire period;
- OAP as strategic instrument for achieving policy goals;
- Clear and operational objectives;
- Based on a status quo analysis;
- Review of policy areas related to the OAP and their impact;
- Actions tailored to the respective problems;
- Good implementation plan with sufficient financial and human resources;
- Relevant government departments must be involved;
- Balanced mix of ‘supply-push’ and ‘demand-pull’ policy measures;
- Countries with short tradition in OAP development need special measures;
- Monitoring and evaluation should be included from the outset;
- Action Plan evaluation = tool for further development of the plan;
- Successful evaluation with clearly purpose, scope and appropriate standard.

For a detailed description of these points see ORGAP Manual and/or the Final project report.

## 2.4.2 Recommendations for different actors

**Recommendations to the EU Commission:** The EU Organic Action Plan is still at an early stage of implementation. While relevant baseline data are in place as part of the monitoring of the EU organic regulation and the Rural Development programme, there is a need to prepare for evaluation of the effects of implementing the major regulatory changes planned from 2009. In particular, the effects of the proposed promotional campaign and compulsory adoption of an EU organic logo on consumer recognition, understanding and trust cannot be captured by current data sources and should be the subject of a specific before and after consumer survey, possibly as part of the Euro-barometer series.

**Recommendations to EU Member states:** The application of ORGAPET to national action plan evaluations should be considered. Members of the project partnership are able to provide assistance with application of ORGAPET. In the absence of action plans, consideration should be given to their potential role in integrating policy measures to delivery the diverse public policy objectives and to mitigate some of the undesired effect of specific policy instruments.

**Recommendations to private stakeholders:** By engaging with action plan development, implementation and evaluation processes, stakeholders can ensure that the results, conclusions drawn and future policies implemented are more relevant to meeting their specific needs. The ORGAP Manual and ORGAPET is assisting stakeholders in this process and give guidance how to best develop and/or evaluate action plans and other policies for organic food and farming.

### 3 Consortium management

#### 3.1 Consortium partners and advisory board

Table 2 gives an overview of participating partners.

**Table 3-1: Project partner Organisations and team members**

No.	Acronym	Organisation	Country	Team members
1	FiBL	Research Institute for Organic Agriculture, Frick	Switzerland	Otto Schmid (scientific coordinator), Bettina Landau (administrative coordinator), Matthias Stolze, Hanna Stolz
2	UWA	University of Wales, Institute of Rural Sciences, Aberystwyth	United Kingdom	Nic Lampkin, Ian Jeffreys, Phillipa Nicholas
3	UHO	University of Hohenheim, Department of Farm Economics, Stuttgart	Germany	Stephan Dabbert, Christian Eichert
4	UPM	Universita Polytechnica delle Marche (DIIGA), Ancona	Italy	Raffaele Zanolì, Susanna Vitulano, Daniela Vairo
5	USD	University of Southern Denmark, Department of Political Science and Public Management	Denmark	Johannes Michelsen, Anne-Maria Tyroll Beck (2006-2007), Mette Meldegaard (until December 2005), Thyra Bonde-Arnholm (2006)
6	IFOAM EU	IFOAM EU Regional Group	Belgium	Victor González, Marco Schlüter, Alessandro Triantafyllidis (through AIAB Italy), Christopher Stopes (through Soil Association, UK)
7	ISD	Institute for Sustainable Development	Slovenia	Anamarija Slabe
8	VUZE	Institute for Agricultural Economics	Czech Republic	Pavla Wollmuthová, Iva Dvorska, Kamila Koutná, Tomáš Zídek
9	LEI	Agricultural Economics Research Institute	Netherlands	Robert Stokkers, Johan Bakker
10	SEAE	Sociedad Española de Agricultura Ecológica	Spain	José Luis Moreno, Victor González, José Luis Porcuna, Manuel González de Molina

Each work package had a work package (WP) manager and a co-manager (see Table 2). These had been chosen on the basis of their expertise in the particular field to give the best possible team. The WP managers in close cooperation with the co-managers and the coordinator were responsible for the coordination of the work carried out in their respective WP's.

**Table 3-2: Work package managers and co-managers**

WP	WP description	WP-manager	Country	WP Co-manager	Country
1	Project coordination and management	Otto Schmid, FiBL (scientific coordinator)	CH	Bettina Landau, FiBL (administrative coordinator)	CH
2	Development of Evaluation Toolbox (ORGAPET)	Nic Lampkin, UWA	UK	-	-
3	National Action Plan analysis	Stephan Dabbert, UHO	DE	Johannes Michelsen, USD	DK
4	European Action plan analysis	Raffaele Zanolì	IT	Johannes Michelsen	DK
5	Synthesis and recommendations (Manual for implementation)	Otto Schmid	CH	Anamarija Slabe	SI
6	Stakeholder integration and dissemination	Victor Gonzalvez,	IFOAM EU	Otto Schmid, FiBL	CH

A project advisory committee was involved in different stages of the project with three physical meetings and/or through electronic consultation.

Below in table 3 is the list of participants.

**Table 3-3. Members of the ORGAP Advisory Committee**

Acs Eva	Kishantos Rural Development Centre, Hungary
Aertsens Joris	Gent University FBW, Gent Belgium
Ahle Per	Ministry of Food, Agriculture and Fisheries, Copenhagen, Denmark
Beck Alexander	European Processors of Organic Food (BEO), Germany
Becu Brigitte	Flamisch Ministry of Agriculture, Belgium
Ingvaldsen Morten	Debio, Norway
Källander Inger	Swedish Ecological Farmers Association, Sweden
Lankester Martien	Avalon-Foundation, Netherlands
Monod Mariane	French Ministry of Agriculture, Paris, France
Nieberg Hiltrud	Federal Agricultural Research Centre (FAL), Braunschweig, Germany
Mikk Merit	Estonian Organic Farming Foundation, Estonia
Nebel Johann	COPA-COJEGA, Denmark
Plsek Karl	Federal Ministry of Health and Woman,
Ramos García María	Junta de Andalusia, Sevilla, Spain
Roland Thomas	The Danish Consumer Council, Denmark
Sarapatka Borivoj	University Oloumuc, Czech Republic

## Appendix 1 – Plan for using and disseminating the knowledge

### App. 1 A Summary of exploitable results

The two main exploitable results are the ORGAPET and the ORGAP Manual, which are described below.

#### ORGAPET – the Organic Action Plan Evaluation Toolbox

As described in chapter 2.3 of this report, the Organic Action Plan Evaluation Toolbox was the most important result of the ORGAP Project.

Below is a more detailed description of the content of ORGAPET, which can be found on the CD-ROM included with the ORGAP manual, as well as on the ORGAP website at [www.orgap.org/orgapet](http://www.orgap.org/orgapet).

The Organic Action Plan Evaluation Toolbox (ORGAPET) is a collection of different information/data sources and evaluation tools, including participative techniques, quantitative assessments and methods to identify relevant indicators, which can be used selectively to meet the needs of a particular assessment of national or EU organic action plans.

The toolbox is structured around ‘compartments’ or sections containing ‘tools’ fulfilling different functions. Each section contains an overview document and a series of annexes detailing a range of methodological approaches (including background documents, relevant data sources and other items), as well as examples of how these have been applied in specific cases, for example the evaluations and workshops conducted as part of the ORGAP project.

The structure of ORGAPET is summarised in the screen shot below.

#### ORGAPET: The Organic Action Plan Evaluation Toolbox

Version 6

April 2008

<b>A</b>	A1: Introduction	A2: Evaluation principles	A3: Development of organic farming	A4: Involving stakeholders	A5: Planning evaluations
<b>B</b>	B1: Describing programmes	B2: Assessing logic and content	B3: Evaluating stakeholder involvement		
<b>C</b>	C1: Defining objectives	C2: Defining indicators	C3: Key indicators	C4: Expert judgement	
<b>D</b>	D1: Integrating results	D2: Evaluation examples			

See ORGAP Website: <http://www.orgap.org/internal/orgapet/>

## **ORGAP Manual**

In order to communicate the results of this project as widely as possible, a practical manual for initiating and evaluating Organic Action Plans has been produced. This manual has been created to inspire the people, organisations and institutions involved, or with an interest, in the organic food and farming sector to engage in the initiation, review, revision and renewal of regional, national and European Organic Action Plans.

The objectives of the manual are to provide:

- a tool for stakeholder involvement in future Action Plan development and implementation processes at EU, national and regional level;
- a guide to the use of the Organic Action Plan Evaluation Toolbox (ORGAPET) developed through the project.

The manual summarises the key lessons learnt from more than 10 years experience of development, implementation and evaluation of Organic Action Plans throughout Europe.

The Organic Action Plan Evaluation Toolbox (ORGAPET), which includes comprehensive information to support the Organic Action Plan development and evaluation process is included with the manual as a CD-ROM, and is also accessible on-line at [www.orgap.org/orgapet](http://www.orgap.org/orgapet).

The manual was printed in a paper version (500 copies) and is also on the project website as pdf-version. There is also a French version as pdf-version available on the website, as there was no French speaking country represented in the project consortium.

## **Comparison and documentation of national organic action plans**

A part of the project work a comparison of national organic action plans was made, which can be downloaded from the ORGAP Website. [http://www.orgap.org/documents/orgap\\_wp31\\_documentation\\_250107.pdf](http://www.orgap.org/documents/orgap_wp31_documentation_250107.pdf)

The main aim of this report is to provide a structured documentation about the objectives, development processes and measures of eight national and regional Action Plans for Organic Food and Farming (Czech Republic, Andalusia (Spain), England, Denmark, the Netherlands, Germany, Slovenia and Italy). Thus, the aim of this report is not to evaluate the action plans, but i) to facilitate the access to detailed action plan information and ii) to provide a condensed comparison of the action plans documented.

Furthermore on the project website a library with national organic action plans has been made, where the detailed plans from 8 different (Czech Republic, Andalusia/Spain, England, Denmark, the Netherlands, Germany, Slovenia and Italy) countries can be downloaded. See: <http://www.orgap.org/library.html>

In addition in the ORGAP Newsletter No. 6 an overview about the state of the development of organic action plans in almost all European Countries is published. This overview is also integrated in the final project synthesis report in the Annex (Deliverable 14), See project website.

### **Status quo of implementation and planned intermediate (mid-term) evaluation of the EU Organic Action Plan**

On the ORGAP Website the state of implementation of the European Action Plan for Organic Food and Farming is documented and is regularly updated. For each of the 21 action points the following questions are answered:

- What is the content?
- What has been done? What was achieved?
- What is planned? What is on the way?

This gives interested persons the possibility to learn what has been implemented and what is planned. This information has been provided by the unit F.5 for organic farming of DG Agriculture of the European Commission.

More information see ORGAP Website: <http://www.orgap.org/implementation.html#ac>

In the second half of 2008 it is planned to make an intermediate (mid-term) evaluation of the EU Organic action plan with support of DG Agriculture of the European Commission, the unit for organic agriculture, using ORGAPET and the proposed core indicators. The work will be conducted by the University of Hohenheim as part of a Master thesis with support of the University of Wales, Institute of Rural Sciences, Aberystwyth and FiBL, the Research Institute of Organic Agriculture in Frick (Switzerland) and will be published until the end of 2008. The work will be financed with the own resources of these three institutions, as the ORGAP project has finished.

**Project reports about perceptions of stakeholders and experts regarding the EU Organic Action Plan and ORGAPET**

A project report (Deliverable7) on “Implementing the European Organic Action Plan in EU member states - stakeholders’ perceptions of implementation problems and coping strategies” recapitulates the results of a series of national workshops undertaken in winter/spring 2007. It brings together very different views and perceptions on organic action plans and possible evaluation methodologies and can be seen as ORGAP’s stakeholder oriented or public oriented step.

A public synthesis report on the scope of national action plans, their evaluation procedures and the operability and appropriateness of the developed evaluation concept at national level, as well as the impact of conflict/synergies and policy proposals for implementing the EU Action Plan in member states. This report (Deliverable 8) comprises different views on the topic evaluation of organic action plans (“National Action Plan analysis”) prepared in the ORGAP project.

Both reports can be downloaded from the ORGAP Website: <http://www.orgap.org/publications.html>

**Final project synthesis report**

The aim of this synthesis report (Deliverable 14) is not only to summarise the project results but to put them in a wider context. Therefore the report does not strictly follow the structure of the different workpackages but focuses more on the lessons learnt from the project. Chapter 1 describes the background and the objectives, structure and the outcome of the ORGAP Project. In chapter 2 a brief history about organic action plan development is given, in particular about the European as well as national organic action plan for organic food and farming. In chapter 3 the authors write about organic action plans – what we know and do not know. This includes success factors, stakeholder involvement, coherence and consistency issues and the how to evaluate organic action plans with ORGAPET. In chapter 4 the Golden Rules for organic action plans. The final Chapter 5 consolidates the recommendations of the whole project arising from the various different work packages in one place. The editors hope that this final project synthesis report helps to initiate a process of evaluation and progressive development of Organic Action Plans at the European, national and regional level.

The report can be downloaded from the ORGAP Website: <http://www.orgap.org/publications.html>

## App. 1 B Exploitation and use potential

The following table provides an overview of exploitable results

(NB the nature of the resource generated by this project precludes commercial exploitation of IPR)

**Table A-1**

Results generated	Owner(s)	Sector(s) of application	Exploitation / use of potential measures	Available since
ORGAPET – Organic Action Plan evaluation toolbox.	Primarily Aberystwyth University (Lampkin) and FiBL (Schmid) as set out on ORGAPET homepage with shared input from all ORGAP partners	Organic agriculture sector: stakeholders, administrators, policy makers, researchers, evaluators. Agriculture policy sector	Can be used freely by relevant agencies/institutions to support their evaluation of organic action plans Free for use via project homepage Interested persons or institutions may receive the tool as CD-Rom from FiBL, the Research Institute of Organic Agriculture in Frick. Project partners can provide support in application of toolbox subject to resource availability.	April 2008
ORGAP Manual “Organic Action Plans” – resource book for development implementation and evaluation of organic action plans I	All ORGAP partners	Organic agriculture sector: stakeholders, administrators, policy makers, researchers, evaluators. Agriculture policy sector.	Can be used freely by relevant agencies to support development,, implementation and evaluation of organic action plans. Free for use via project homepage Interested persons or institutions may receive the ORGAP Manual as printed booklet from FiBL, the Research Institute of Organic Agriculture in Frick or from the IFOAM EU Group office in Brussels (with the ORGAPET CD-Rom included)	April 2008

**Table A-1 (cont.)**

<b>Results generated</b>	<b>Owner(s)</b>	<b>Sector(s) of application</b>	<b>Exploitation / use of potential measures</b>	<b>Available since</b>
Comparison and documentation of national organic action plans	Primarily FIBL as set out on ORGAPET homepage with shared input from all ORGAP partners	Organic agriculture sector: stakeholders, administrators, policy makers, researchers, evaluators. Agriculture policy sector.	Can be used freely by relevant agencies/institutions to support the development or evaluation of organic action plans Free for use via project homepage	May 2006
Status quo of implementation and planned intermediate evaluation of the EU Organic Action Plan	Primarily FIBL as set out on ORGAPET homepage with shared input from UHO and UWA	Organic agriculture sector: stakeholders, administrators, policy makers, researchers, evaluators.	Can be used freely by relevant agencies/institutions to support the development or evaluation of organic action plans Free for use via project homepage	Since 2006, regularly updated (Status July 2008)
Project reports about perceptions of stakeholders and experts regarding the EU Organic Action Plan and ORGAPET	Primarily University of Hohenheim (UHO) and University of Southern Denmark (USD) as set out on ORGAPET homepage with shared input from all ORGAP partners	Organic agriculture sector: stakeholders, administrators, policy makers, researchers, evaluators.	Can be used freely by relevant agencies/institutions to support the development or evaluation of organic action plans Free for use via project homepage	October 2007
Final project synthesis report	Primarily FIBL as set out on ORGAPET homepage with shared input from all ORGAP workpackage leaders (UWA, UHO, USD, UPM)	Organic agriculture sector: stakeholders, administrators, policy makers, researchers, evaluators. Agriculture policy sector.	Can be used freely by relevant agencies/institutions to support the development or evaluation of organic action plans Free for use via project homepage	July 2008

For the generation of the recommendations, especially important were the links to the results of three older EU projects, which dealt with policies for organic farming and the regulatory framework:

- EEC 2092/91 Revision (SSP-CT-2004-502397).
- EU CEEOPF Further Development of Organic Farming Policy in Europe, with Particular Emphasis on EU Enlargement (QLK5-2002-00917);
- OFCAP Effects of the CAP-reform and possible further developments on organic farming in the EU (FAIR3-CT96-1794)

## **App. 1 C Innovation related activities**

The Organic Action Plan Evaluation Toolbox (ORGAPET), which has been developed under the lead of the University of Wales, Institute of Rural Sciences, Aberystwyth (United Kingdom), is in this form unique. It is for the first time that for a specific action plan of the European Union such a specific tool has been developed, which also brings together in easily accessible form a significant literature and data resource to support the evaluation process. Furthermore ORGAPET complements very well the more general evaluation tools of the European Commission such as the MEANS framework and Evalsed.

Furthermore the ORGAP Manual is in this form also as it is for the first time that for persons involved in organic action plans an easy to read guide is at hand, which will allow to develop, implement and evaluate action plans in a systematic and consistent way.

The first feedback from the presentation both of the toolbox and the manual to different interested users, such as the European Commission and EU members states as well as to private sector stakeholders has been very positive.

As Partner 1 (FiBL) was the project coordinator, both the ORGAPET CD-Rom and the ORGAP Manual will be stored at the Research Institute of Organic Agriculture in Frick (Switzerland).

The data of direct internet users are collected by Partner 1 (FiBL), who will maintain the project webpage for at least 5 years. A regular update of the completion of the European Organic Action plan will be made.

UWA together with FiBL will maintain the internet version of ORGAPET with occasional updates for relevant literature, data and internet links. The updates can be accessed by the CD-ROM users.

## **App. 1 D Report on engaging with the public**

Dissemination activities were an integrated part of the project. Thus, several workshops with stakeholders and researchers were held in all consortium countries, where there was an organic action plan in place. Furthermore, many partners organized additional dissemination activities.

The project produced 6 main public reports, 6 scientific publications (see Table 3), and a project web-page at [www.orgap.org](http://www.orgap.org) where all reports are available. Furthermore more than 20 articles have been published in non-scientific journals or press. Many presentations about the ORGAP Project have been made during the 3 yearly projects. At several conferences posters from the ORGAP project have been presented. 6 ORGAP newsletters were published. The IFOAM EU member organisations (more than 300) have been regularly informed or involved by direct mailing or through the IFOAM EU newsletter (ca. monthly).

Members of the team produced from May 2005 until July 2008 in total more than 250 dissemination items in the form of book chapters, scientific conference papers published in the proceedings, workshop presentations, posters and papers, articles in magazines and newsletters and direct E-mail communications both national languages and in English.

The project organised 3 workshops with stakeholders and had ongoing communication with the Unit on Organic Farming in DG Agriculture, which is responsible for the Organic Regulation.

The manual together with ORGAPET was presented to the EU Commission and the Standing Committee on Organic Farming on the 2<sup>nd</sup> of July 2008 in Brussels. The feedback was very positive. See press release of FiBL: <http://www.fibl.org/english/news/press-releases/2008/0708-orgap.php>

Furthermore at the World Organic Congress of IFOAM in June 2008 in Modena both the manual as well as ORGAPET was presented to the public in two sessions, in a session of DG Research of the European Commission and in a policy session.

At the world biggest fair in Nuremberg the ORGAP results have been presented in February 2007 and in February 2008 in a special seminar.
