StoM: semantic technology at your service, ready to go!

PUNDIT: successful output of the groundbreaking research into next generation ICT, carried out within the framework of the StoM Project, co-founded by the European Union under the EU 7th Framework Programme.

Pundit

StoM continued the successful research of the previously funded SemLib project and developed further its outcomes into sustainable business applications. One of its results is the *Pundit web annotation system*.

Powered with Semantic Web technologies and with a user interface characterized by a coherent and elegant design, **Pundit** can now be considered **the ultimate tool for web annotation**, to easily highlight, comment and create semantic annotations on text fragments in any web page.

The Pundit Annotator together with the Pundit Dashboard form **a comprehensive suite** for all web annotation needs.

The **Pundit Annotator** is a handy annotation tool that allows users to **highlight** and **comment** web pages. The **Pundit Annotator Pro** and the soon to be launched **Pundit Annotator Premium** are professional tools, targeted for students, researchers, journalists and scholars who need to create semantic annotations in web pages.

The **Pundit Dashboard web app** consists of an online platform where users review, search, export and manage annotations, highlights and comments that they created with Pundit.

Thanks to StoM, Pundit is now a mature tool, that can be successfully presented to final users, prospects and investors alike.

Start to use Pundit now! Visit the website thepund.it, install the Pundit tools and start annotating the web!
