

FLEXINET

FP7-2013-NMP-ICT-FOF (RTD) Project 608627

F L E X I N E T

**The FLEXINET project public website** is <http://www.flexinet-fof.eu>

**Contact Point:** The FLEXINET project co-ordinator is Prof Bob Young, Loughborough University, UK. Email [R.I.Young@lboro.ac.uk](mailto:R.I.Young@lboro.ac.uk) Telephone +44 1509 227662

**Disclaimer:**

The FLEXINET project is co-funded by the European Commission under the 7<sup>th</sup> Framework Programme. This document reflects only authors' views. The EC is not liable for any use that may be made of the information contained herein.

## FLEXINET Partners

	Loughborough University, UK
	Coventry University, UK
	Instituto Tecnológico de Informática, Spain
	Fraunhofer-Gesellschaft zur Foerderung der Angewandten Forschung E.V., Germany
	Asociacion de Investigacion de la Industria Agroalimentaria, Spain
	Control 2K Limited, UK
	Universitaet St. Gallen, Switzerland
	Indesit Company S.P.A., Italy
	KSB AG, Germany
	Customdrinks SL, Spain
	Highfleet INC, United States
	Holonix S.r.l., Italy
	Technische Universität Dortmund

## Diagrams illustrating the work of the project:

### Intelligent Systems Configuration Services for Flexible Dynamic Global Production Networks

FLEXINET project no. 608627 is funded under the Seventh Framework Programme FP7-2013-NMP-ICT-FOF (RTD). Duration: 1<sup>st</sup> July 2013 – 30<sup>th</sup> June 2016

*For further information contact the project coordinator,  
Prof Bob Young. Email: R.I.Young@lboro.ac.uk*

### FLEXINET SERVICES

RE-CONFIGURING YOUR GLOBAL PRODUCTION NETWORKS

**FLEXINET 608627**  
FP7.2013-9.NMP.ICT.FOF (RTD)

## The FLEXINET start point – July 2013

“The overall aim of the proposed research is to enhance the ability of manufacturing organizations to rapidly and successfully re-configure their product-service global production networks through the provision of configuration design services that can intelligently evaluate the likely business and technical integration issues as production networks dynamically evolve”.

DoW quotation:  
 “The metaphor underlying FLEXINET is ‘to start with a new business idea in the morning and have all the required data and networks understood by the afternoon’ “

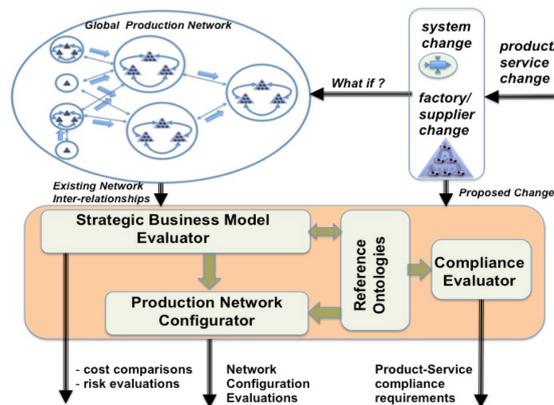

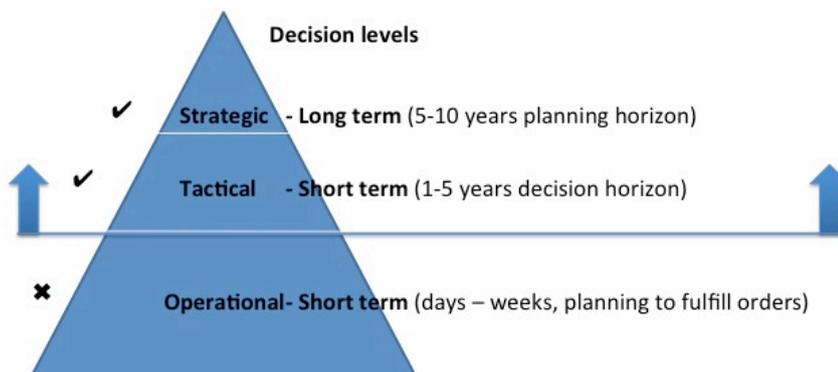

Figure 1: The FLEXINET Concept: Intelligent Production Network Configuration Services

## The Enterprise Context for FLEXINET

The enterprise is a business oriented organisation of human capital with various skill sets and assets required by the Business Objectives

## Today – the FLEXINET Vision for Business Innovation

- Can you start with a new business idea in the morning and have all required business data and your production networks identified by the afternoon?

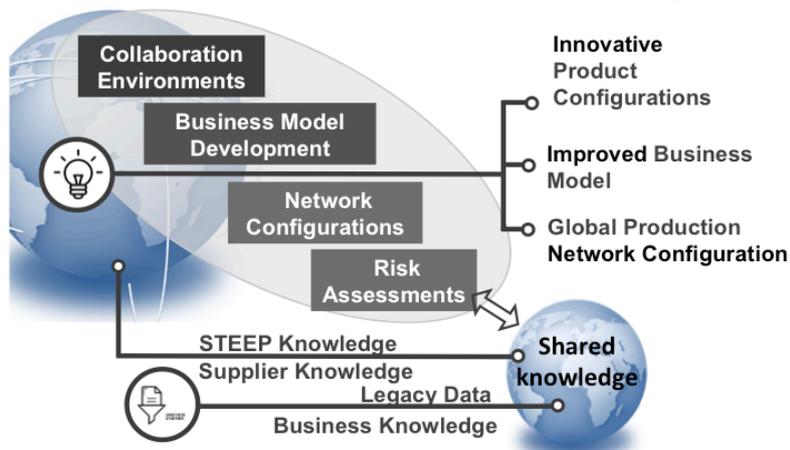

- Why not?
  - ❖ Access to the right people
  - ❖ Access to the right information
  - ❖ Need for appropriate analysis tools

## The key result – the FLEXINET platform

### FLEXINET SERVICES

From new idea to new business understanding

The key result – the FLEXINET platform

FLEXINET SERVICES

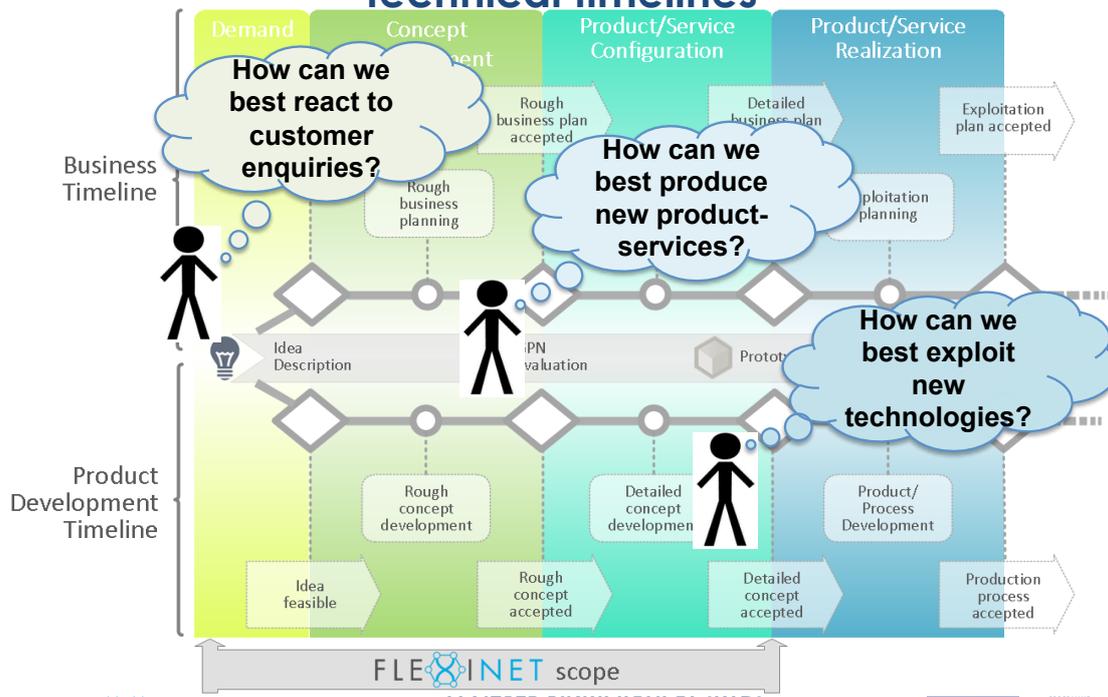

**FLEXINET has demonstrated and validated a platform for manufacturing industry that goes well beyond currently available commercial tools in terms of its ability to be flexibly configured to capture and share knowledge across a wide range of heterogeneous decision support software applications**

**Lesson Learnt:**

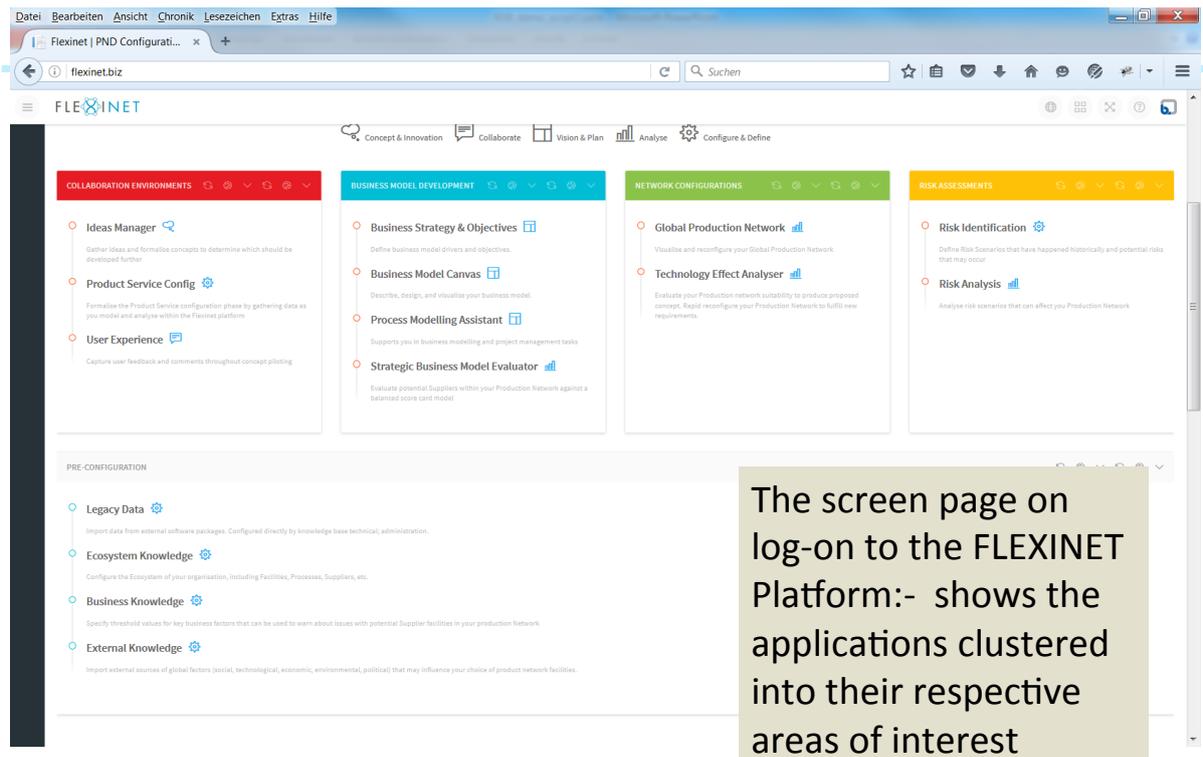

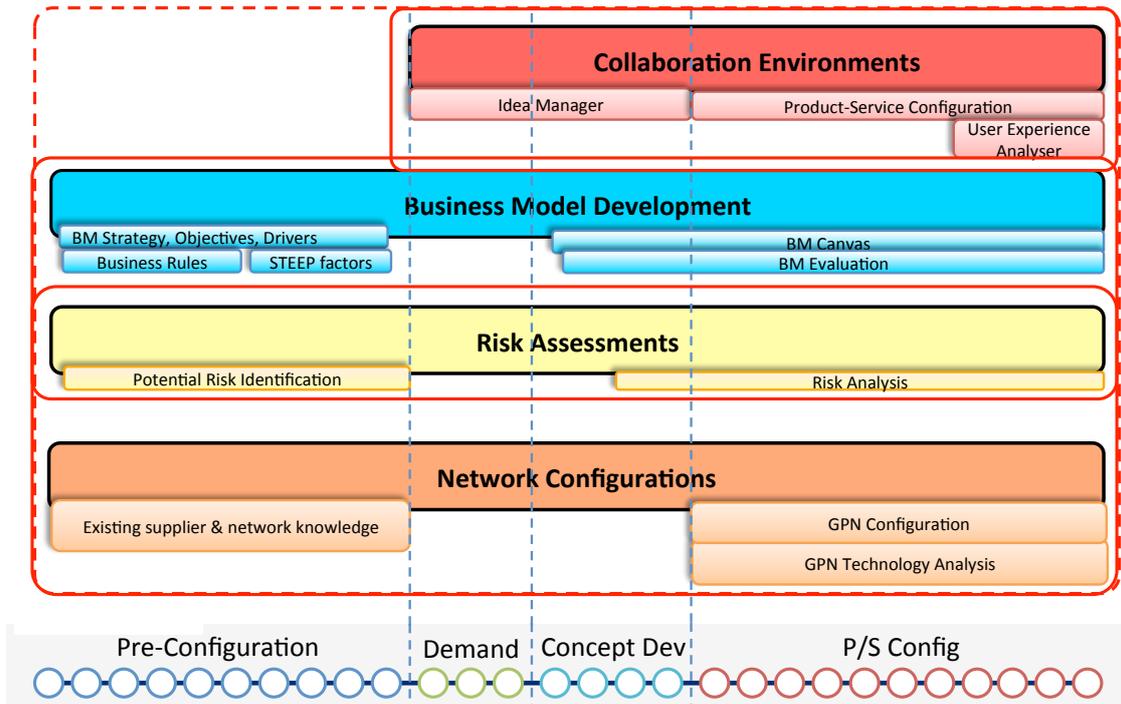

Building the platform is a very time consuming process

- ensuring a capable ontology
- ensuring a consistent understanding across application developers

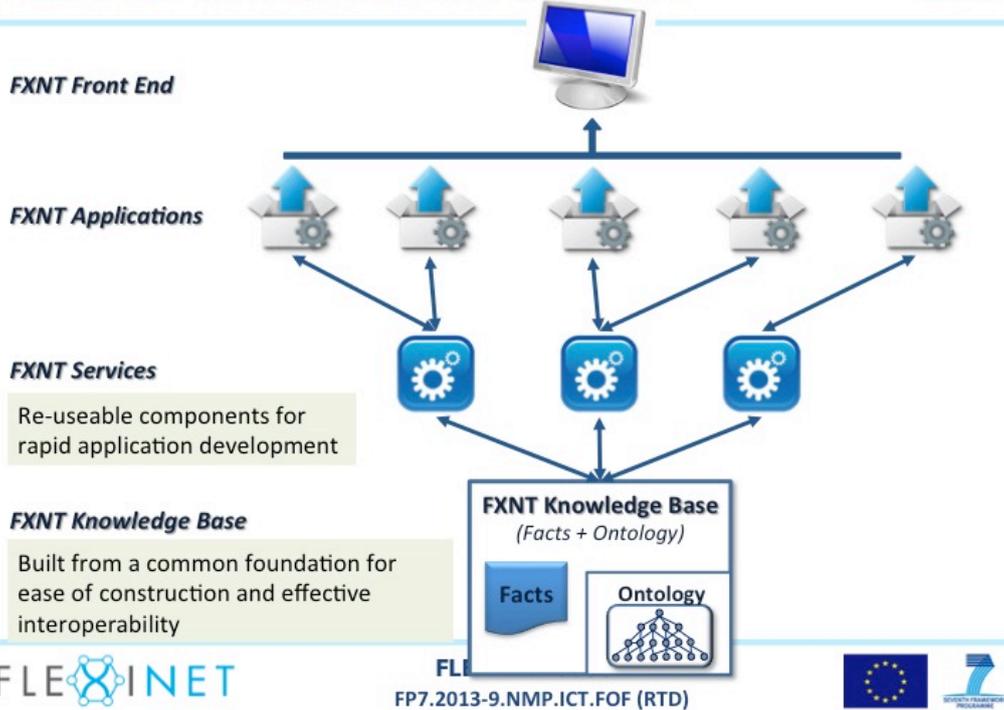

Some key business questions along business and technical timelines

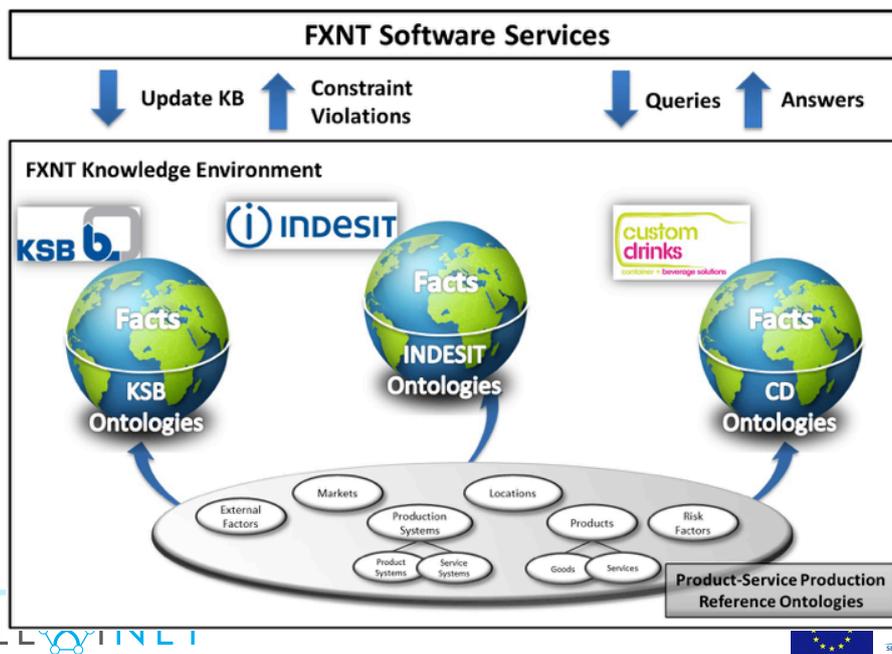

# The FLEXINET applications shown against application area and timeline phase

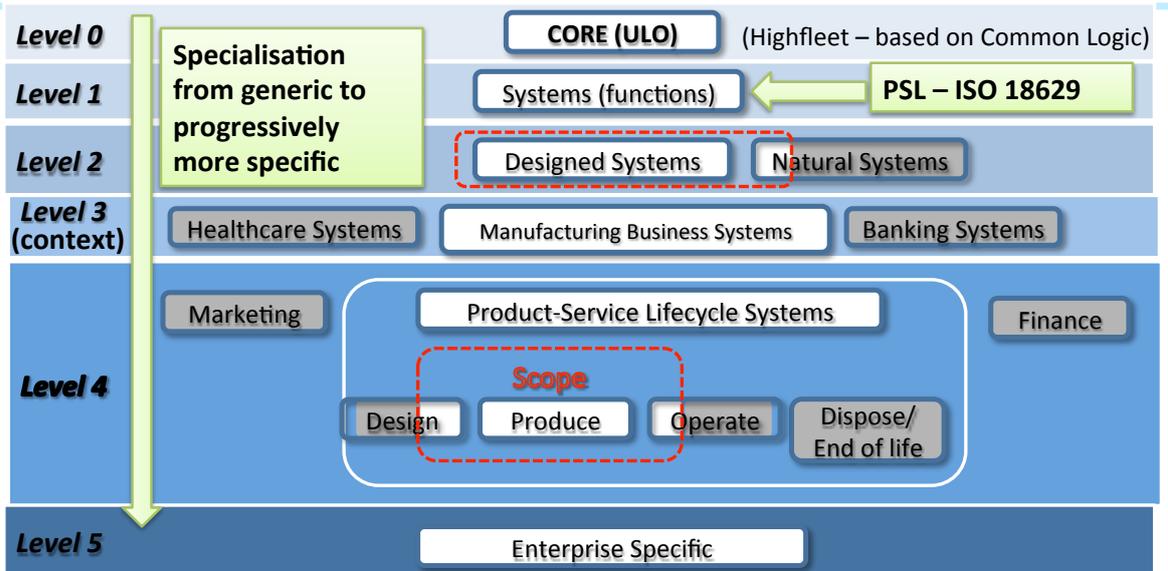

# FLEXINET Software Service approach

## Reference ontology supports KB construction and interoperation across software services

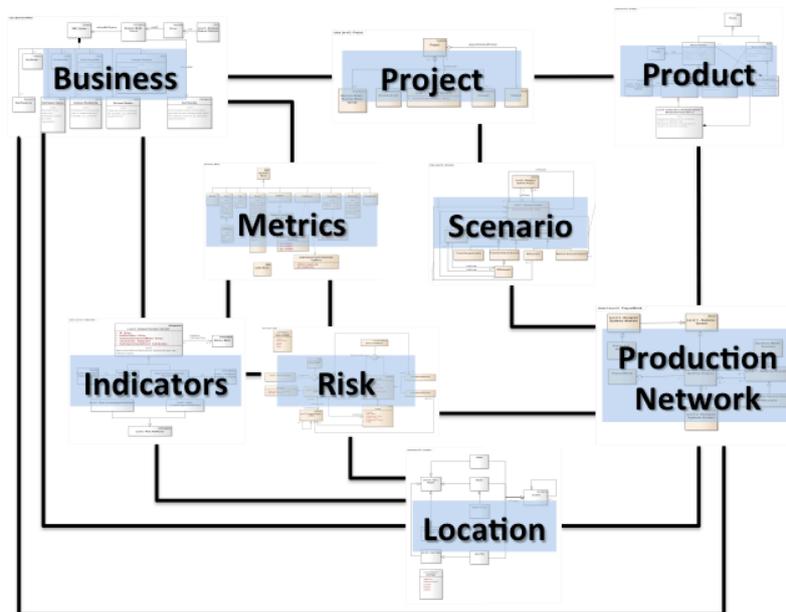

## Ontology Layers

Everything from level 0-4 should be standard and be used to readily configure enterprise specific ontologies

The enterprise specific ontologies form the basis for the knowledge base that can support 'what-if' queries on the potential global production system configurations.

## Main categories of concepts in the reference ontology

**The Business Case**

FLEXINET offers a solution for day to day business challenges reconfiguring resources to meet evolving business demands

**FLEXINET Architecture High-Level View**

**FXNT Applications**

Open Source Licensing under consideration

**FXNT Services**

Re-useable components for rapid application development

**FXNT Knowledge Base**

Built from a common foundation for ease of construction and effective interoperability

Key feature is the "Links" back to Knowledge Base create dynamic data available for other Applications and Services to use.

**Summary of achievements**

➤ **Dissemination:**

- ❖ 'Normal' academic dissemination plus "clustered" project workshops and industrial workshops
- ❖ Led the formation of a new Resilient Production Networks cluster with 3 other FoF projects
- ❖ IMS contribution through the CSGPN Manufacturing Technology Platform
- ❖ Listed as a Commission 'success story'

➤ **Exploitation:**

- ❖ 2 business plans for exploitation of the FLEXINET platform
  - One based on a TRL8 platform
  - One to build from current TRL5 to TRL8 through a Community Group
- ❖ ISO 20534 standard in progress
- ❖ Many specific partner exploitation opportunities
