 24 November 2005 - 24 November 2005

 United Kingdom

A seminar on data & monitoring in science, engineering and technology (SET) will take place in Bradford, UK, on 24 November.

Organised by the UK Resource Centre for Women in Science, Engineering and Technology, this event will focus on the key issues on data and monitoring in the SET sector. Organisations with effective monitoring tools in place have evidence on which to base diversity and equality strategies, and they can clearly identify any issues that need to be addressed and continue to track progress.

Participants will receive a new good practice guide about monitoring in the SET private sector and find out about a new initiative to encourage more detailed statistics on the position of women in SET. For further information, please visit:
