The 2006 European Conference on Computational Fluid Dynamics (ECCOMAS CFD) will take place from 5-8 September, in Egmond aan Zee, the Netherlands.

The goal of the ECCOMAS CFD congresses is to periodically bring together researchers, industrialists and students working in computational science and engineering. The event will focus on computational fluid dynamics, computational acoustics, computational electromagnetics, computational mathematics and related fields in the computational sciences. A forum is provided for fostering the exchange of information and experience in these rapidly developing fields, and promoting the transfer of knowledge and technology between research and industry on a European and global scale.

The congress includes lectures, mini-symposia and peer-reviewed contributed papers. The link between research and industry will be fostered by special technology sessions. For more information, please visit: http://www.eccomasCFD2006.nl/
