 France

A conference/debate entitled "Telematics Engineering in the framework of the Telematics Applications Programme" will be held in Paris on 11 April 1995.

Telematics Engineering is a new field of investigation within the Telematics Applications Programme of the Fourth Framework Programme for RTD activities (1994-1998). It is concerned with identifying the appropriate methods, models, techniques and tools for the efficient introduction, implementation and validation of new telematics applications, systems and services.

The conference/debate will discuss Telematics Engineering in the light of the recent call for proposals for the Telematics Applications Programme on 15 March 1995 (see RTD-News RCN 3878).
