International conference on patient safety research, Portugal

From 2007-09-24 to 2007-09-26, Portugal

An international conference on patient safety research in the EU will take place from 24 to 26 September in Porto, Portugal.

The three-day event aims to give researchers and policy-makers from European and European neighbouring countries a scientific forum to:

- describe current research in patient safety and allied fields;
- demonstrate for policy makers where evidence from research can inform policy;
- build proposals for future research and a Europe-wide research agenda;
- create international collaborative research networks.

The event on the future of patient safety research in Europe is funded through a Specific Support Action under the Sixth Framework Programme (FP6) and is part of the Portuguese EU Presidency calendar.
