Project description

Patient-centred continuity of palliative cancer care

Palliative care can provide pain and symptom management for cancer patients undergoing treatments. In fact, palliative care is an integral part of cancer care services, from diagnosis to treatment. However, many cancer patients at the end-of-life phase leave hospital without continuity of information or certainty about further treatment and care provision. In this context, the EU-funded PAL-CYCLES project will design a transitional palliative care programme for patients with advanced cancer, adaptable to local cultures and healthcare systems. The PAL-CYCLES programme will be developed in seven European countries. The overall aims are to
facilitate continuity of palliative cancer care into the community care setting, reduce unplanned hospital admissions and improve quality of life at the end of life.

Fields of science

medical and health sciences > clinical medicine > oncology

Programme(s)

HORIZON.2.1 - Health
HORIZON.2.1.3 - Non-Communicable and Rare Diseases

Topic(s)

HORIZON-HLTH-2021-DISEASE-04-01 - Improved supportive, palliative, survivorship and end-of-life care of cancer patients
