Project description

Better treatment options for a rare non-Hodgkin lymphoma

Anaplastic large cell lymphoma (ALCL) is a rare non-Hodgkin lymphoma that affects any age group, with higher incidence in children and young adults. It can manifest as a systemic or localised disease with symptoms such as swollen lymph nodes, fever, fatigue, and weight loss. Treatment options include chemotherapy, radiation therapy, and stem cell transplant. The FANTOM project, supported by the Marie Skłodowska-Curie Actions programme, aims to train researchers in ALCL by using innovative model systems and multi-omics technologies. It will study the roles of the immune system and tumour stroma, developing non-invasive biomarkers and novel
therapeutic approaches. This project will aid in advancing our understanding of
ALCL and provide better treatment options for those affected.
