Open Access Infrastructure for Research in Europe

Fact Sheet

Project Information

OpenAIRE

Grant agreement ID: 246686

Status
Closed project

Start date
1 December 2009

End date
30 November 2012

Funded under
FP7-INFRASTRUCTURES

Overall budget
€ 5 027 379

EU contribution
€ 4 169 927

Coordinated by
ETHNIKO KAI KAPODISTRIAKO
PANEPISTIMIO ATHINON

Greece

Project description

Scientific Information Repository supporting the European FP7 Research Programme

The proposed project will deliver "an electronic infrastructure and supporting mechanisms for the identification, deposition, access, and monitoring of FP7 and ERC funded articles", where the main supporting mechanism will be the establishment and operation of the European Helpdesk System. Additionally, the project will offer "a special repository for articles that can be stored neither in institutional nor in subject-based/thematic repositories", while it will also prepare the way for similar functionality on scientific data. All deposited articles and data will be freely accessible worldwide through a new portal to the products of EU-funded research, built as part of this project. It will also connect research input (project contracts) with research output (publications and data) and monitor the system use to obtain statistically significant trends about both. Thematically, the project will focus...
to obtain statistically-significant trends about both. Thematically, the project will focus on peer-reviewed publications (primarily, journal articles in final or pre-print form, but also conference articles, when considered important) in at least the seven disciplines highlighted in the Open Access pilot (energy, environment, health, cognitive systems-interaction-robotics, electronic infrastructures, science in society, and socioeconomic sciences-humanities) and on research datasets in a subset of them. Geographically, however, it will have a definitive "European footprint" by covering the European Union in its entirety, engaging people and scientific repositories in almost all 27 member states and beyond. The electronic infrastructure built by the project will be based on state-of-the-art software services of the D-NET package developed within the DRIVER and DRIVER-II projects and the Invenio digital repository software developed at CERN. These will be further enhanced and complemented with services developed within OpenAIRE to address critical requirements and issues that arise in the target environment and require further investigation.
