Objective

The ADAPT-r ITN aims to significantly increase European research capacity through a unique and ground-breaking research model: at its core is the development of a robust and sustainable ITN in an emergent Supra-Disciplinary field of research across a range of design and arts disciplines – creative practice research. ADAPT-r will train new researchers, increase supervisory capacity, partner with private sector SMEs in research projects providing substantial opportunity for real world testing of the research and real world training, and introduce creative practice research methodologies to a new generation.

The unique model proposed will enable ADAPT-r to substantially leverage the number of doctoral candidates within the ITN budget model maximising higher degree training opportunities. The research that is produced through the ADAPT-r ITN will contribute to a wider research effort to increase knowledge, understanding and quality of research in creative disciplines and its methods. The Marie Curie ITN
Funding will enable an existing bi-lateral research training relationship to be expanded to include multiple partners from across Europe to create a greatly enhanced international research training network with a long-term future.

The ADAPT-r ITN will address identified deficits in EU research training for creative disciplines. Through training creative practice researchers in the explication and dissemination of tacit knowledges and latent cognitive resources the ADAPT-r ITN will make a substantive contribution to meeting EU 2020 priorities by building a new generation of creative practice researchers and research lead practitioners able to meet the complex and often competing demands of contemporary Europe. Implementation of the ADAPT-r ITN will result in 32 Fellowships, 8 training conferences, a major research conference, a major exhibition, three key books, and a web site providing public access to research and events.
