Fact Sheet

Project information

ICT4Life

Grant agreement ID: 690090

Project website

Start date 1 January 2016
End date 31 December 2018

Funded under: H2020-EU.3.1.6.

Overall budget: € 3 433 218,75

EU contribution € 3 433 218,75

Coordinated by: ARTICA TELEMEDICINA SL
Spain

Objective

There are many efforts at European level to improve our ability to monitor health and to prevent, detect, treat and manage disease so that active and healthy ageing can be promoted. In this project, breakthrough research and radical innovation on new services for integrated care is achieved by means of an efficient and cost-effective service-oriented ICT-based collaborative platform which exploits latest advances in sensorization, processing, communications and personalized HMI.

ICT4Life will develop a modular Health Service Platform that will allow the provision, easily and in an adaptive way, of 6 ICT4Life Cluster Services for integrated care according to different end-user needs.

Addressing the priorities of the European Innovation Partnership on Active and Healthy Ageing, a multidisciplinary approach which integrates expertise and knowledge of medical doctors, nurses, social workers, psychologists, physiotherapists, social scientists, patients as well as programmers and interaction designers is proposed. It relies, from a general perspective, on: New training models for the care workforce; advanced multisensory-based analytics and integration with biomedical devices to have patient activity and health status information; Feedback-based decision-making engine to integrate patient and care provider data; Improve natural interaction mechanisms with patients with interfaces through television with Android TV possibilities, smartphones and desktop applications; Knowledge creation about co-morbidities.
Focusing on real medical problems, people with Dementia, Alzheimer or Parkinson disease, constitute the main group of users ICT4Life will focus the analysis on. ICT4Life validation will be done in real use case scenarios in 3 European countries of all this pathologies in order to validate ICT4Life services, measure effects of treatment and project developments and to evaluate knowledge acquired about co-morbidities of these diseases.

Field of Science

pathology
parkinson
mobile phone
public services
alzheimer
radio and television

Programme(s)

H2020-EU.3.1.6. - Health care provision and integrated care

Topic(s)

PHC-25-2015 - Advanced ICT systems and services for integrated care

Call for proposal

H2020-PHC-2015-single-stage
