Objective

The Marina proposal overall aim is to create an all-inclusive Knowledge Sharing Platform (KSP) catalysing and organising the convergence of already existing networks, communities, on-line platforms and services providing an online socio-technical environment that facilitates and stimulates the direct engagement of researchers, Civil Society Organisations (CSOs), citizens, industry stakeholders, policy and decision makers, research funders and communicators for improving Responsible Research and Innovation.

In particular, the project will establish, curate and experiment a Responsible Research and Innovation platform involving societal actors working together during the whole research and innovation process for aligning better both the process and
its outcomes, with the values, needs and expectations of European society, integrating citizens visions, needs and desires into science and innovation, promoting RRI with focus on marine issues and pressures that have important effects on the European societies. The project activities and outcomes, even if connected with marine research field, will define this systematic approach in order to make it transferable and reproducible for any RRI thematic domain. All project results and activities will be extrapolated from the RRI marine field to general RRI and broadly disseminated. The expected outcome of the Work Programme is a clear improvement of the integration of society in science and innovation. The MARINA project will follow this strategic line of “strengthening and facilitating” the capacity of the research and innovation to align and integrate the social needs through a suitable knowledge sharing platform and federating activities.
