

# Holistic Surface Water and Groundwater Management for Sustainable Cities

## Fact Sheet

### Project Information

**Water4Cities**

Grant agreement ID: 734409

[Project website](#) 

**DOI**

[10.3030/734409](https://doi.org/10.3030/734409) 

Project closed

**EC signature date**

4 November 2016

**Start date**

1 March 2017

**End date**

30 September 2021

**Funded under**

EXCELLENT SCIENCE - Marie Skłodowska-Curie Actions

**Total cost**

€ 1 242 000,00

**EU contribution**

€ 1 242 000,00

**Coordinated by**

PANEPISTIMIO THESSALIAS

 Greece

## Objective

Urban water management becomes progressively more challenging in the view of population growth and increasing complexity of water management infrastructure. In this line, there is an ever increase demand from the water providers' and public authorities' perspective to critically evaluate the existing water ecosystems at city level in respect to the water supply, waste water treatment, reuse potential and the effect the growing population has on the water ecosystem and endangered species. To enable effective decision making at the entire city level, both surface water and groundwater should be viewed as part of the overall urban water ecosystem with its spatio-temporal availability, quantity and quality and competing uses being taken into

account.

The Water4Cities project will rely on sensor technologies, data and visual analytics to enable localization, visualization and analysis of urban water (both surface water and groundwater) at a holistic urban setting providing services to multiple water stakeholders. More specifically, the Water4Cities project aims to develop the necessary models and associated platform that will enable water providers and relevant stakeholders to a) monitor in real-time the urban water resources; b) support their decisions for optimal urban water management causing minimal environmental impact and c) involve policy makers, corporations and the public to provide the support for sound and balanced decision-making. Beyond the scientific results, Water4Cities will target the exchange of knowledge among project partners. The Water4Cities project requires the collaboration of researchers in different research areas, i.e. water management, urban infrastructure management, sensor networks, data mining, data visualization, system integration, urban planning. Due to the multi-disciplinary nature of the project, staff exchanges will allow partners working closely together to deliver high quality results.

## Fields of science (EuroSciVoc) i

[engineering and technology](#) > [environmental engineering](#) > [water treatment processes](#) > [\*\*wastewater treatment processes\*\*](#)

[natural sciences](#) > [computer and information sciences](#) > [data science](#) > [\*\*data mining\*\*](#)
