CORDIS oferuje możliwość skorzystania z odnośników do publicznie dostępnych publikacji i rezultatów projektów realizowanych w ramach programów ramowych HORYZONT.

Odnośniki do rezultatów i publikacji związanych z poszczególnymi projektami 7PR, a także odnośniki do niektórych konkretnych kategorii wyników, takich jak zbiory danych i oprogramowanie, są dynamicznie pobierane z systemu [OpenAIRE](#) .

Rezultaty

[Intelligent Data Collection Mechanisms and APIs_ Interim version](#)

A report on the mechanisms and APIs for intelligent and adaptive data collection, along with the prototype implementation of the APIs on the platforms and smart objects to be used in the use cases. The task will reflect the outcomes of task T3.2 and T3.3.

[Intelligent Data Collection Mechanisms and APIs_ Final version](#)

A report on the mechanisms and APIs for intelligent and adaptive data collection, along with the prototype implementation of the APIs on the platforms and smart objects to be used in the use cases. The task will reflect the outcomes of task T3.2 and T3.3.

[Report on legal and regulatory implications of SecureIoT services deployment_ Final version](#)

Report reflecting the outcomes of T5.6.

[Trustworthiness Metrics and Utility Calculation_ Final version](#)

Definition of trustworthiness metrics as part of the security monitoring infrastructure. It will reflect the outcome of task T3.4

[Standardization Activities and Participation in Associations_ Final version](#)

A report reflecting the project's contributions to standards, while also reporting the project's participation in SDO and associations' activities

[Report on Community Building and Ecosystem Support_ Final version](#)

A report reporting on the community building activities and outcomes, as well as on the support activities to the participants of the project's ecosystem.

[SecureIoT services for third-party IoT communities_ First version](#)

Report on the IoT security services offered in the scope of SecureIoT to other communities such as FIWARE and IoT-EPI. The report will also described collaborations with other communities and ecosystems based on the outcomes of task T7.2.

[Detailed Specification of Usage Scenarios and Planning of Validation Activities_ First version](#)

Detailed description of the use cases planning activities, including the details of each scenario. As part of this deliverables, the KPIs of each use case will be detailed and the KPIs listed in Section 1.3 of the partB, along with their target values will become more specific. It is based on 6.1.

[IoT Security Solutions Market Platform Architecture and Specifications_ First version](#)

Detailed specification of the services of the market platform and of its architecture, based on T7.1.

[Integration and Validation of the third-party solutions_ First version](#)

Report on processes/tools devoted to the auditing of third-party IoT security services (T7.3). It will also deal with validation against laws and regulations (T7.5).

[Architecture and Technical Specifications of SecurityIoT Services_ Final version](#)

Specification of the technical architecture and main technical components based on the outcomes of T2.4.

[Evaluation of the SecureIoT Services and Use Cases_ Final version](#)

Evaluation of the project's services and use cases, including both techno-economic evaluation (T6.6) and analysis of stakeholders' feedback (T6.5).

[Dissemination and Communication Activities_ Interim version](#)

A report (living document) on the outcomes of T8.1, which will be delivered periodically (per annum).

[Legal and Regulatory Auditing of SecureIoT Architecture and Services_ First version](#)

Report on SecureIoT's compliance to legal/regulatory requirements, including a review of envisaged measures. It's based on T2.5.

[Report on legal and regulatory implications of SecureIoT services deployment_ First version](#)

Report reflecting the outcomes of T5.6.

[Standardization Activities and Participation in Associations_ First version](#)

A report reflecting the project's contributions to standards, while also reporting the project's participation in SDO and associations' activities

[Legal and Regulatory Auditing of SecureIoT Architecture and Services_ Final version](#)

Report on SecureIoT's compliance to legal/regulatory requirements, including a review of envisaged measures. It's based on T2.5.

[Reference Scenarios and Use Cases](#)

Description of the project's reference scenarios and use cases based on T2.1.

[Architecture and Technical Specifications of SecurityIoT Services_ First version](#)

Specification of the technical architecture and main technical components based on the outcomes of T2.4.

[Report on SLAs for Security Monitoring_ Final Version](#)

A report on SLAs for security monitoring in multi-vendor, multi-device and highly heterogeneous IoT ecosystems. It will reflect the outcomes of task T3.5.

[Detailed Specification of Usage Scenarios and Planning of Validation Activities Final version](#)

Detailed description of the use cases planning activities, including the details of each scenario. As part of this deliverables, the KPIs of each use case will be detailed and the KPIs listed in Section 1.3 of the partB, along with their target values will become more specific. It is based on 6.1.

[Trustworthiness Metrics and Utility Calculation First version](#)

Definition of trustworthiness metrics as part of the security monitoring infrastructure. It will reflect the outcome of task T3.4

[Dissemination and Communication Activities First version](#)

A report (living document) on the outcomes of T8.1, which will be delivered periodically (per annum).

[Evaluation of the SecureIoT Services and Use Cases First version](#)

Evaluation of the project's services and use cases, including both techno-economic evaluation (T6.6) and analysis of stakeholders' feedback (T6.5).

[Final Report](#)

The project's final report summarizing the main achievements and findings of the project.

[Integration and Validation of the third-party solutions Final version](#)

Report on processes/tools devoted to the auditing of third-party IoT security services (T7.3). It will also deal with validation against laws and regulations (T7.5).

[Analysis of Stakeholders' Requirements](#)

Report reflecting the outcomes of task T2.2

[Dissemination and Communication Activities Final version](#)

A report (living document) on the outcomes of T8.1, which will be delivered periodically (per annum).

[Trustworthiness Metrics and Utility Calculation Interim Version](#)

Definition of trustworthiness metrics as part of the security monitoring infrastructure. It will reflect the outcome of task T3.4

[IoT Security and Privacy Models](#)

Specification of IoT security and privacy policy models and languages to be used in the project, based on task T2.3.

[IoT Security Solutions Market Platform Architecture and Specifications Final version](#)

Detailed specification of the services of the market platform and of its architecture, based on T7.1.

[Evaluation of the SecureIoT Services and Use Cases Interim version](#)

Evaluation of the project's services and use cases, including both techno-economic evaluation (T6.6) and analysis of stakeholders' feedback (T6.5).

[SecureIoT services for third-party IoT communities Final version](#)

Report on the IoT security services offered in the scope of SecureIoT to other communities such as FIWARE and IoT-EPI. The report will also described collaborations with other communities and ecosystems based on the outcomes of task T7.2.

[Report on Community Building and Ecosystem Support First version](#)

A report reporting on the community building activities and outcomes, as well as on the support activities to the participants of the project's ecosystem.

[Report on SLAs for Security Monitoring First version](#)

A report on SLAs for security monitoring in mutli-vendor, multi-device and highly heterogeneous IoT ecosystems. It will reflect the outcomes of task T3.5.

[Intelligent Data Collection Mechanisms and APIs First Version](#)

A report on the mechanisms and APIs for intelligent and adaptive data collection, along with the prototype implementation of the APIs on the platforms and smart objects to be used in the use cases. The task will reflect the outcomes of task T3.2 and T3.3.

Demonstrators, pilots, prototypes (34)

[Integration and Validation of Industrie 4.0 Usage Scenarios Final version](#)

Prototype implementation of the SecureIoT-enabled Industrie 4.0 use cases based on the outcomes of task T6.2.

[IoT Developers Support as a Service First version](#)

Prototype implementation of the SECaaS services of task T5.3. The releases will be supported by T5.5.

[Integration and Validation of Industrie 4.0 Usage Scenarios First version](#)

Prototype implementation of the SecureIoT-enabled Industrie 4.0 use cases based on the outcomes of task T6.2.

[Security Monitoring and Knowledge Inference_First version](#)

Prototype implementation of the security monitoring mechanisms of T4.1.

[Models and Annotation for Security-Aware IoT Programming_Final version](#)

Prototype implementation of the annotations oriented programming approach of task T4.4.

[Cross-Platform Security Support_Interim version](#)

Prototype implementation of the security interoperability features of the project, including a relevant report based on task T4.3.

[Cross-Platform Security Support_First version](#)

Prototype implementation of the security interoperability features of the project, including a relevant report based on task T4.3.

[IoT Compliance Auditing as a Service_Interim version](#)

Prototype implementation of the SECaaS services of task T5.2. The releases will be supported by T5.5.

[IoT Risk Assessment and Mitigation as a Service_Final version](#)

Prototype implementation of the SECaaS services of task T5.1. The releases will be supported by T5.5.

[Integration and Validation of Industrie 4.0 Usage Scenarios_Interim version](#)

Prototype implementation of the SecureIoT-enabled Industrie 4.0 use cases based on the outcomes of task T6.2.

[IoT Risk Assessment and Mitigation as a Service_First version](#)

Prototype implementation of the SECaaS services of task T5.1. The releases will be supported by T5.5.

[Security Monitoring and Knowledge Inference_Final version](#)

Prototype implementation of the security monitoring mechanisms of T4.1.

[IoT Developers Support as a Service_Final version](#)

Prototype implementation of the SECaaS services of task T5.3. The releases will be supported by T5.5.

[Tools and Techniques for Predictive IoT Security_Interim version](#)

Prototype implementation of the predictive analytics techniques and tools of T4.2.

[Models and Annotation for Security-Aware IoT Programming_Interim version](#)

Prototype implementation of the annotations oriented programming approach of task T4.4.

[IoT Compliance Auditing as a Service_Final version](#)

Prototype implementation of the SECaaS services of task T5.2. The releases will be supported by T5.5.

[Security Information Storage and Analytics Infrastructure_First Version](#)

Prototype implementation of the infrastructure for scalable storage and processing of IoT security information, based on T3.1.

[Integration and Validation of AAL Usage Scenarios_Interim version](#)

Prototype implementation of the SecureIoT-enabled socially assisted robots use cases based on the outcomes of task T6.3.

[Tools and Techniques for Predictive IoT Security_Final version](#)

Prototype implementation of the predictive analytics techniques and tools of T4.2.

[Integration and Validation of Connected Car Usage Scenarios_First version](#)

Prototype implementation of the SecureIoT-enabled connected car and self-driving use cases based on the task T6.4.

[Security Information Storage and Analytics Infrastructure_Final version](#)

Prototype implementation of the infrastructure for scalable storage and processing of IoT security information, based on T3.1

[IoT Compliance Auditing as a Service_First version](#)

Prototype implementation of the SECaaS services of task T5.2. The releases will be supported by T5.5.

[Integration and Validation of Connected Car Usage Scenarios_Interim version](#)

Prototype implementation of the SecureIoT-enabled connected car and self-driving use cases based on the task T6.4.

[Integration and Validation of AAL Usage Scenarios_First version](#)

Prototype implementation of the SecureIoT-enabled socially assisted robots use cases based on the outcomes of task T6.3.

[Tools and Techniques for Predictive IoT Security_First version](#)

Prototype implementation of the predictive analytics techniques and tools of T4.2.

[IoT Security Knowledge Base_Final version](#)

Prototype implementation of the knowledge based on the outcomes of task T5.3. The releases will be supported by T5.5

[IoT Developers Support as a Service_Interim version](#)

Prototype implementation of the SECaaS services of task T5.3. The releases will be supported by T5.5.

[Cross-Platform Security Support_Final version](#) 

Prototype implementation of the security interoperability features of the project, including a relevant report based on task T4.3.

[Models and Annotation for Security-Aware IoT Programming_First](#) 

Prototype implementation of the annotations oriented programming approach of task T4.4.

[IoT Risk Assessment and Mitigation as a Service_Interim version](#) 

Prototype implementation of the SECaaS services of task T5.1. The releases will be supported by T5.5.

[IoT Security Knowledge Base_Interim version](#) 

Prototype implementation of the knowledge based on the outcomes of task T5.3. The releases will be supported by T5.5

[Integration and Validation of AAL Usage Scenarios_Final version](#) 

Prototype implementation of the SecureIoT-enabled socially assisted robots use cases based on the outcomes of task T6.3.

[IoT Security Knowledge Base_First version](#) 

Prototype implementation of the knowledge based on the outcomes of task T5.3. The releases will be supported by T5.5

[Integration and Validation of Connected Car Usage Scenarios_Final version](#) 

Prototype implementation of the SecureIoT-enabled connected car and self-driving use cases based on the task T6.4.

Open Research Data Pilot (3)

[Data Management Plan](#) 

The project's DMP as illustrated in Section 2, it will be an outcome of T1.3.

[Data Management Plan_Interim version](#) 

The project's second version of DMP as illustrated in Section 2, it will be an outcome of T1.3.

[Data Management Plan_Final version](#) 

The project's final version of DMP as illustrated in Section 2, it will be an outcome of T1.3.

Other (3)

[Integrated Multi-Sided Market platform_First version](#) 

Prototype implementation of the MSP (T7.4).

[Integrated Multi-Sided Market platform_Final version](#) 

Prototype implementation of the MSP (T7.4).

[Integrated Multi-Sided Market platform_Interim version](#) 

Prototype implementation of the MSP (T7.4).

IoT European Security and Privacy Projects: Integration, Architectures and Interoperability

Autorzy: Ferrera , E , Pastrone , C , Brun , P-E , De Besombes , R , Loupos , K , Kouloumpis , G , O'Sullivan , P , Papageorgiou , A , Katsoulakos , P , Karakostas , B , Mygiakis , A , Stratigaki , C , Caglayan , B , Starynkevitch , B , Skoufis , C , Christofi , S , Ferry , N , Song , H , Solberg , A , Matthews , P , Skarmeta , A F , Santa , J , Beliatas , M J , Presser , M A , Parreira , J X , Martínez

Opublikowane w: Next Generation Internet of Things: Distributed Intelligence at the Edge and Human Machine-to-Machine Cooperation, 2018, Strona(/y) 207-292, ISBN 9788770220088

Wydawca: River Publishers Series in Communication

[ThreatPredict: From Global Social and Technical Big Data to Cyber Threat Forecast](#) 

Autorzy: Jérôme François, Frederic Beck, Ghita Mezzour, Kathleen M. Carley, Abdelkader Lahmadi, Mounir Ghogho, Abdellah Houmz, Hicham Hammouchi, Mehdi Zakroum, Narjisse Nejari, Othmane Cherqi

Opublikowane w: Advanced Technologies for Security Applications - Proceedings of the NATO Science for Peace and Security 'Cluster Workshop on Advanced Technologies', 17-18 September 2019, Leuven, Belgium, 2020, Strona(/y) 45-54, ISBN 978-94-024-2020-3

Wydawca: Springer Netherlands
DOI: 10.1007/978-94-024-2021-0_5

[3. Data-driven IoT Security Using Deep Learning Techniques](#)

Autorzy: Astaras Stefanos, Nikos Kefalakis, Angela-Maria Despotopoulou, John Soldatos

Opublikowane w: Security Risk Management for the Internet of Things: Technologies and Techniques for IoT Security, Privacy and Data Protection, 2020, ISBN 978-1-68083-682-0

Wydawca: Now Publishers
DOI: 10.1561/9781680836837.ch3

[Next Generation Internet of Things](#)

Autorzy: Ovidiu Vermesan, Joël Bacquet

Opublikowane w: Next Generation Internet of Things, Numer 1, 2018, Strona(/y) 1-352, ISBN 9788-770220071

Wydawca: River Publisher
DOI: 10.13052/rp-9788770220071

[Application of Artificial Intelligence Techniques for the Creation of Novel Services Based on Connected Vehicles](#)

Autorzy: Adrian Arroyo, David Evans, Alexandre Solleiro, Ignacio EliceGUI, Alejandro Manilla, Daniel Calvo

Opublikowane w: Intelligent System Solutions for Auto Mobility and Beyond - Advanced Microsystems for Automotive Applications 2020, 2021, Strona(/y) 26-37, ISBN 978-3-030-65870-0

Wydawca: Springer International Publishing
DOI: 10.1007/978-3-030-65871-7_3

Conference proceedings (13)

[Trustworthiness in Supply Chains : A modular extensible Approach applied to Industrial IoT](#)

Autorzy: Jurgen Neises, George Moldovan, Thomas Walloschke, Bianca Popovici

Opublikowane w: 2020 Global Internet of Things Summit (GloTS), 2020, Strona(/y) 1-6, ISBN 978-1-7281-6728-2

Wydawca: IEEE
DOI: 10.1109/giots49054.2020.9119580

[IoT Security Approaches in Social Robots for Ambient Assisted Living Scenarios](#)

Autorzy: Alexandru Vulpe, Ali Paikan, Razvan Craciunescu, Pouyan Ziafati, Sofoklis Kyriazakos, Adrien Hemmer, Remi Badonnel

Opublikowane w: 2019 22nd International Symposium on Wireless Personal Multimedia Communications (WPMC), 2019, Strona(/y) 1-6, ISBN 978-1-7281-5419-0

Wydawca: IEEE

DOI: 10.1109/wpmc48795.2019.9096127

[Application-aware intrusion detection - A Systematic Literature Review and Implications for Automotive Systems](#) 

Autorzy: David Schubert, Hendrik Eikerling, Jörg Holtmann

Opublikowane w: 17th escar Europe: embedded security in cars, 2019

Wydawca: Ruhr-Universität Bochum, Universitätsbibliothek

DOI: 10.13154/294-6654

[A Process Mining Tool for Supporting IoT Security](#) 

Autorzy: Adrien Hemmer, Remi Badonnel, Jerome Francois, Isabelle Chrisment

Opublikowane w: NOMS 2020 - 2020 IEEE/IFIP Network Operations and Management Symposium, 2020, Strona(/y) 1-2, ISBN 978-1-7281-4973-8

Wydawca: IEEE

DOI: 10.1109/noms47738.2020.9110254

[Triple S -Secure Sustainable Ships](#) 

Autorzy: Peter Rus

Opublikowane w: 2019 22nd International Symposium on Wireless Personal Multimedia Communications (WPMC), 2019, Strona(/y) 1-4, ISBN 978-1-7281-5419-0

Wydawca: IEEE

DOI: 10.1109/wpmc48795.2019.9096199

port2dist: Semantic Port Distances for Network Analytics

Autorzy: Evrard, Laurent; François, Jérôme; Colin, Jean-Noël; Beck, Frédéric

Opublikowane w: <https://hal.inria.fr/hal-02345491>, Numer 1, 2019, ISBN 978-3-903176-15-7

Wydawca: IEEE

Attacker Behavior-Based Metric for Security Monitoring Applied to Darknet Analysis

Autorzy: J. François (Inria), L. Evrard (Inria, U. Namur), J.-N. Colin (U. Namur)

Opublikowane w: IFIP/IEEE International Symposium on Integrated Network Management 2019, 2019, ISBN 978-3-903176-15-7

Wydawca: IFIP/IEEE

[Scalable and Configurable End-to-End Collection and Analysis of IoT Security Data : Towards End-to-End Security in IoT Systems](#) 

Autorzy: Aikaterini Roukounaki, Sofoklis Efremidis, John Soldatos, Juergen Neises, Thomas Walloschke, Nikos Kefalakis

Opublikowane w: 2019 Global IoT Summit (GloTS), 2019, Strona(/y) 1-6, ISBN 978-1-7281-2171-0

Wydawca: IEEE

DOI: 10.1109/giots.2019.8766407

port2dist: Semantic Port Distances for Network Analytics

Autorzy: J. François (Inria), L. Evrard (Inria, U. Namur), J.-N. Colin (U. Namur), F. Bek (Inria)

Opublikowane w: IFIP/IEEE International Symposium on Integrated Network Management 2019 - demo sessions, 2019, ISBN 978-3-903176-15-7

Wydawca: IFIP/IEEE

Passive Inference of User Actions through IoT Gateway Encrypted Traffic Analysis

Autorzy: Pierre-Marie Junges ; Jérôme François ; Olivier Festor

Opublikowane w: IEEE/IFIP Workshop on Security for Emerging Distributed Network Technologies (DISSECT) at IFIP/IEEE NOMS, 2019, ISBN 978-3-903176-15-7

Wydawca: IFIP/IEEE

[End-to-end security assessment framework for connected vehicles](#) 

Autorzy: David Evans, Daniel Calvo, Adrian Arroyo, Alejandro Manilla, David Gomez

Opublikowane w: 2019 22nd International Symposium on Wireless Personal Multimedia Communications (WPMC), 2019, Strona(/y) 1-6, ISBN 978-1-7281-5419-0

Wydawca: IEEE

DOI: 10.1109/wpmc48795.2019.9096062

[Deep Learning Analytics for IoT Security over a Configurable BigData Platform : Data-Driven IoT Systems](#) 

Autorzy: Stefanos Astaras, Sofoklis Efremidis, Angela-Maria Despotopoulou, John Soldatos, Nikos Kefalakis

Opublikowane w: 2019 22nd International Symposium on Wireless Personal Multimedia Communications (WPMC), 2019, Strona(/y) 1-6, ISBN 978-1-7281-5419-0

Wydawca: IEEE

DOI: 10.1109/wpmc48795.2019.9096076

[A Process Mining Approach for Supporting IoT Predictive Security](#) 

Autorzy: Adrien Hemmer, Remi Badonnel, Isabelle Chrisment

Opublikowane w: NOMS 2020 - 2020 IEEE/IFIP Network Operations and Management Symposium, 2020, Strona(/y) 1-9, ISBN 978-1-7281-4973-8

Wydawca: IEEE

DOI: 10.1109/noms47738.2020.9110411

Monographic books (1)

[Security Risk Management for the Internet of Things: Technologies and Techniques for IoT Security, Privacy and Data Protection](#) 

Autorzy: Nikos Kefalakis | Angela-Maria Despotopoulou | Spyridon Evangelatos | John Soldatos

Opublikowane w: 2020, ISBN 978-1-68083-683-7

Wydawca: now publishers

DOI: 10.1561/9781680836837

Peer reviewed articles (2)

[Comparative Assessment of Process Mining for Supporting IoT Predictive Security](#) 

Autorzy: Adrien Hemmer, Mohamed Abderrahim, Remi Badonnel, Jerome Francois, Isabelle Chrisment

Opublikowane w: IEEE Transactions on Network and Service Management, 2020, Strona(/y) 1-1, ISSN 1932-4537

Wydawca: Institute of Electrical and Electronics Engineers

DOI: 10.1109/tnsm.2020.3038172

Securing IoT Applications with Smart Objects: Framework and a Socially Assistive Robots Case Study

Autorzy: John Soldatos, Sofoklis Kyriazakos, Pouyan Ziafati

Opublikowane w: Wireless Personal Communications, 2019, ISSN 0929-6212

Wydawca: Kluwer Academic Publishers
