Project description

Connecting environmental research infrastructures to support science for society

European environmental research infrastructures are key providers of high-quality digital assets like research data and services. Understanding the Earth needs an
interdisciplinary approach based on harmonised and easy-to-use data and services from the contributing environmental research infrastructures. The overarching goal of EU-funded ENVRI-FAIR is to advance the findability, accessibility, interoperability and reusability (FAIRness) of these digital assets and connect them to the emerging European Open Science Cloud. ENVRI-FAIR targets the development and implementation of a technical and policy framework to overcome discipline boundaries within the ENVRI community. Cross-discipline harmonisation and standardisation, together with the implementation of joint data management and access structures, will facilitate truly interdisciplinary Earth system science that is fundamental to addressing today's environmental challenges.
