# How action preparation shapes what we perceive: Spatiotemporal visual processing in the context of goal-directed eye and hand movements

## Fact Sheet

### Project Information

#### PremotorPerception

Grant agreement ID: 898520

[Project website](#)

#### DOI

[10.3030/898520](https://doi.org/10.3030/898520)

Project closed

#### EC signature date

17 April 2020

#### Start date

1 March 2021

#### End date

29 February 2024

#### Funded under

EXCELLENT SCIENCE - Marie Skłodowska-Curie Actions

#### Total cost

€ 246 669,12

#### EU contribution

€ 246 669,12

#### Coordinated by

HUMBOLDT-UNIVERSITAET ZU  
BERLIN

Germany

## Project description

### A closer look at goal-directed eye and hand movements

Humans continuously make saccadic eye movements to see their surroundings with the high precision of the fovea. Each saccade shifts the image on the retinas, such that the visual system needs to integrate blurry peripheral views of objects with their

high-resolution equivalents once brought into the fovea. Understanding how this seamless integration is achieved is critical for theories of human perception. The EU-funded project PremotorPerception combines psychophysical protocols that enable a continuous assessment of visual sensitivity throughout the visual field with transcranial magnetic brain stimulation to investigate the role of specific brain areas underlying these modulations. We assess dynamic modulations of visual processing before saccades and goal-directed hand movements that enable continuous perception as the eyes move.

## Fields of science (EuroSciVoc)
