Project description

A patient-centred approach for multimorbid patients

An ageing population has resulted in growing numbers of complex multimorbid chronic patients who require medical support. Therefore, modern medicine requires a novel, patient-centred attitude for more effective treatment options, as well as lower
costs and better decision-making. The EU-funded GERONTE project will combine expertise in public health and public sector digital transformation to harness digital technology to improve the healthcare outcomes of elderly patients with comorbidities. Using the model of cancer multidisciplinary management, it will co-design with patients, caregivers and professionals a patient-tailored approach that will ease care pathways, management and treatment decisions while reducing healthcare costs.
