Overall budget

€ 1 087 617

EU contribution

€ 969 958

Coordinated by

INSTITUT DE RECHERCHE POUR LE DEVELOPPEMENT

France

Objective

A multidisciplinary research on the epidemiological transition in two North African countries will characterise the present transition stage, its consequences on the burden of disease, the underlying individual and societal determinants to help design adapted, feasible and cost-effective strategies to face this new reality on the mid to long term. Key features of the research are: a precise assessment of the actual burden of lifestyle related non communicable chronic diseases including an in-depth analysis of the environment and lifestyle risk factors at population level; an investigation of the different actors (population, health personnel, decision-makers) attitudes and practices towards the changing epidemiological situation; a risk approach methodology taking both epidemiological evidence and public opinion into account to design jointly, with decision-makers sectoral and multisectoral intervention strategies to improve health care and promote healthy lifestyles relevant
to the context.

Programme(s)

FP5-INCO 2 - Programme for research, technological development and demonstration on "Confirming the international role of Community research, 1998-2002"

Topic(s)

1.2.1.-1.3. - Mediterranean partner countries
