Ziel

Organic agriculture is considered to be one of the important development pathways towards a more sustainable agriculture and food production. This development has been and will be dependent on continuous research and innovation. CORE Organic started in 2004 and has been evolving for more than a decade. The present proposal for a CORE Organic Cofund will continue, to update and consolidate the series of transnational research calls that support a focused and coordinated research and innovation effort covering the most important challenges along the organic value chains, for example: increasing the organic production potentials, enhancing resource efficiency, and improving animal welfare. In addition this research and innovation plays a key role in adapting to the new EU regulations on Organic Farming. The new CORE Organic network will be expanded with additional partners from Netherlands and Italy totalling to 25 partners from 19 countries. One joint call with 3-4 topics will be launched with co-funding from the European Commission and another call without EU co-funding is being planned for 2019 as part of the additional activities. Other ERA-NETs with a similar scope will be invited to join this second call.

The CORE Organic partners are working to increase innovation potential, knowledge accessibility, alignment of national research and international outreach in support of the ERA-NET’s objectives. CORE Organic will closely monitor the funded projects and offer assistance regarding stakeholder involvement and dissemination in order to secure high impact of the research efforts. An impact assessment will be performed after the end of the projects. Looking to the future, the CORE Organic Cofund aims to deliver results that can be used to develop the organic sector throughout Europe and the world, and to continue to be a key player in the European Research Area.
